INTRODUCTION

What You'll Find In this Section:

Page 1-1 ■ What is Futura Software?

Page 1-2 ■ What are the Basic
Components?

NOTES:

What is Futura Software?

Futura software applications provide a comprehensive automated office management package that allows a wide range of users (receptionists to system administrators) to efficiently perform any task in the O&P and/or DME facility.

Because the information is entered and stored in a database system, the information is easily accessed from various locations within the system. In addition, special security safeguards have been built in to allow various levels of access to multiple users.

From a single user to multiple users; from appointment scheduling, logging calls, setting up patient information, claims, and invoices, to order tracking and payment tasks, Futura does it all and more!

What are the Basic Components?

There are several components which may be included in the Futura software installed in your office. Depending upon your security level, you may or may not see all of them. However, there are 6 basic components which may appear at any given time. They are reflected in the menus at the top of the screen.

- **Receivables**

Allowing you to make appointments, create patient accounts, create and track claims and invoices, enter prescriptions, and just about any other AR related task performed in your office.

- **Payables**

Offers you the ability to quickly and easily track payment information, inventory, orders, shipments, as well as enter and store vendor information, set categories, and other payable duties.

- **Reports**

Make summarizing your office activities as simple as can be. You can view not only financial activities, but generally any other information stored in the system in a variety of ways and combinations. Reports can be run at your convenience and can be customized for the specific needs of your office.

- **Setup**

Makes it easy for anyone in the office to enter information (patients, insurance, physicians, attorneys, etc.) into the system without needing to access any of the other components. You can also set up specifics for each user on the system so that you can provide each person with his/her own ID, password, and printer configuration.

- **Admin**

It is likely that only one or two people in your office will have access to this functionality. Its functionality basically consists of tasks surrounding duties such as daily maintenance and close, security setup for other users, cash drawer information, software system functionality, database selection, etc. Depending upon your level of system access you may or may not see any or some of these features.

- **Utilities**

Contains a variety of functions, some of which closely relate to the features within the other modules. It provides access to basic system operations and more advanced office tasks (e.g., fee maintenance, tickle files, call log, queue initialization, etc.).

SECTION 2

ABOUT THIS GUIDE

What You'll Find In this Section:

Page 2-1 ■ What is the Purpose of this Guide?

Page 2-2 ■ How to Understand this Guide

NOTES:

What is the Purpose of this Guide?

This user guide is generally meant to be a reference tool for you to help you use Futura Software in the most efficient way possible. It is recommended that you review the guide prior to using the system so that you will become familiar with its basic operations and capabilities (e.g., system conventions, user setup, navigation, etc.).

Once you become acquainted with the basics, you can use this guide later on to review or learn some of the more advanced functions (e.g., running reports, using the tickle file, etc.)

Each section of this guide is associated with the basic tasks you'll be performing in and with Futura Software. The guide is based on the processes you'll be performing (i.e., basic daily tasks vs. less frequent more advanced duties). The guide is not organized by menu. You simply need to think of the task you want to perform (e.g., adding patient information, creating an invoice, etc.) and look for it in this guide. In addition, an extensive index has been included at the end of this guide to help you find particular information quickly and easily.

How to Understand this Guide

This guide contains certain “conventions” (i.e., formats) to help you find specific information quickly and easily. The following is a list of these conventions.

Symbols and Note Conventions

From time to time particular symbols and notes will appear in the outside margins of certain pages. Such information is included to help accelerate the use of this guide.

NOTE

This symbol identifies additional information and/or reminders that may be helpful to you in completing a task.

IMPORTANT!

This symbol identifies essential information and precautions for keeping your information accurate and secure. It is very important that you read and follow this information whenever you see it in the guide. Always read the entire IMPORTANT note very carefully and make sure you understand the instructions in the procedures

HINT:

This symbol offers a suggestion or idea to help you work more effectively and make the most of a particular feature.

SHORT CUT:

This symbol appears when a particular task can be achieved by using a combination of keys on the keyboard.

Additional Conventions

Screen illustrations are included in this guide to serve as “landmarks” to help you recognize a specific function and/or to let you know you are following a specific procedure correctly.

Bullet Notes

bullet notes provide necessary information and/or explain what you should expect after you perform a step or series of steps.

- Bullet notes
Generally bullet notes will look like this.

Menu Paths

A menu path is represented by using “►” to designate the series of menus and submenus to be accessed by using your mouse.

Example:

Patient►Transactions

This path indicates that you should click on the Patient label from the main menu, then choose Transactions to display the corresponding window.

Steps

Instructions for each feature or task are outlined in a series of steps.

1. Read each step.
2. Follow the steps in sequence.

Step Terminology

There are several terms used within the steps describing the various tasks:

What Does It Say? <i>(What do I use?)</i>	What It Means
Click..." <i>(mouse)</i>	Indicates the need to use your mouse to complete an action. Example: Click the Apply button to save the changes.
Select..." <i>(mouse)</i>	Indicates that you need to select an item from a table or drop down list by clicking on it with your mouse. Example: Select the patient name from the list."
Press 'Enter' to..." <i>(keyboard)</i>	Indicates that you need to press a key on the keyboard to perform an action or operation. Example: Press and hold Alt, then press V to save the information."
Enter the information..." <i>(keyboard)</i>	Indicates that you need to use the keyboard to type specific information into the designated text field. Example: Enter the patient's street address.

NOTES:

Working with a Database

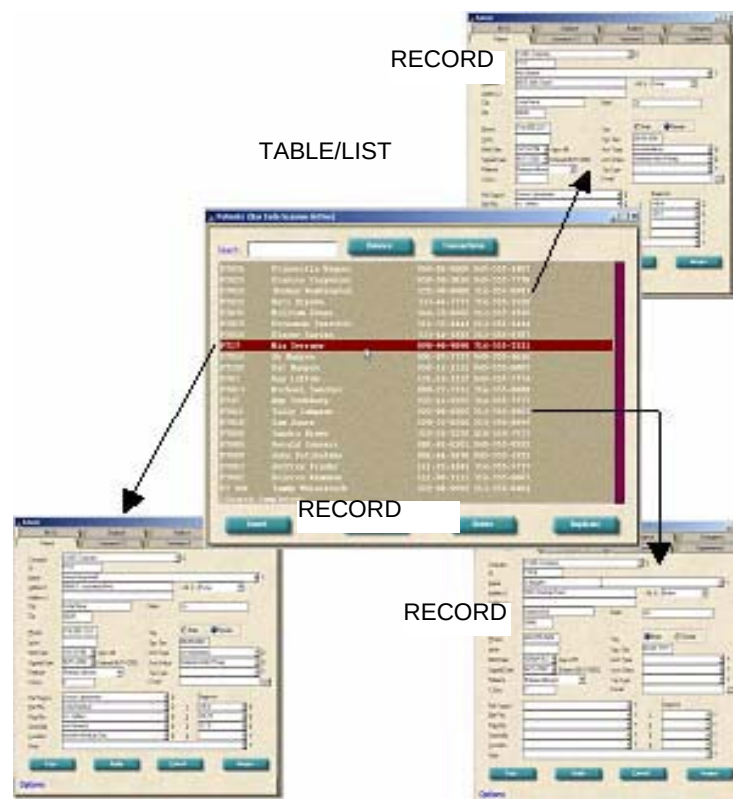

The method that Futura software applications use to store and process information is called a database. Basically, a database is made up of tables that interact with each other. A different table exists for each kind or category of information stored (e.g., there is a patient table, an invoice table, an inventory table, etc.). Each time you add an item to a category, it will be stored in a table. The tables are represented to you as lists. Each table provides you with a different list (patient list, specialist list, insurance company list, code list)

Storing Information - Records and Tables (Lists)

Each line or item in a table represents an individual record. As you enter an item, you do so using a record form. There is no limit to the number of records you can add to a table/list.

More about Records and Fields

While tables/lists are made up of records, records consist of a series of information fields (see the appendix in this guide for additional information about fields). The field types vary from text fields to drop down lists. Some records contain radio buttons, check boxes, that allow you to make special settings and/or choices in how the information is saved (see page 3-3).

Each line or item in a list represents an individual record.

HINT:

Some fields in a record have a light bulb () next to them (see the appendix in this guide for additional information about fields). If you click on that light bulb it will open the “source” record. Basically, this is because everything in the system is somehow linked to everything else. In this way, you can also continue to make changes on the fly (see page 3-10).

Example:

If you are in a patient record, then click on the light bulb next to the Referring Physician field, the record corresponding to the specified physician will be displayed. You can then make and save changes as needed to the physician record without having to close the main record from which you are working.

Communication Between Tables (Lists)

Once you have information stored within various tables/lists, you will find that certain records in tables/lists pull information from other tables/lists. Those tables/lists are also made up of individual records.

HINT

Press the Insert key or click the Add/Insert button to open a new (blank) record.

Example 1:

Because Futura software applications allow you to access separate tables/lists from certain records, you can also create records for those separate tables/lists on the fly. Once you open a table from ANYwhere in the system, you can add, edit, and delete records as needed without having to access the tables/lists through their related menus. These other tables/lists and records are usually associated with specific fields on the original record as shown below.

Example 2:

In the example shown below, if you open the Physician table from within a patient record, you can click on the Physician field to display the physician table from which you can select a physician's name.

In addition, if you find that the physician you need to include is not yet in the physician table, you can add that physician from where you are - without having to leave the patient record and/or go to a menu to find the physician table.

You can access the Physician table and its corresponding records.

From the patient record, you have access to many other forms such as those shown here.

You can access the Location table and its corresponding records.

NOTE:

No matter what window, screen, or record you have displayed, you can always access other menus for other areas in the software application by clicking on the menu titles at the top of the screen.

Receivables Payables Reports Setup Admin Utilities

Understanding Futura Software System Conventions

To make the system easier to navigate and understand, there are certain formats and methods shown within the system that make its operation consistent, thereby making it easier to use. This section will show you the basic conventions and what they mean and/or how they can be used.

What are Windows?

Futura software is what is known as a windows application. This is because everything you do and see within Futura software is done by way of various windows or screens. There are three basic windows that you will see in the application:

- You can use the  symbols that appear in the upper right corner of the windows to minimize, maximize, or close a window (see page 3-5 for more information).

Tables/Lists

The table windows provide you with a list of records (see page 3-1). To select a line item for which you want to view the record (e.g., in order to edit the information), you can double click on that item to open its corresponding record.

Records

Records consist of a series of fields and make up the individual lines in a table (see page 3-1).

Prompts

Prompts will usually appear when there is additional information or decision required to complete a task. These are also referred to as Messages or Message boxes.

Examples:

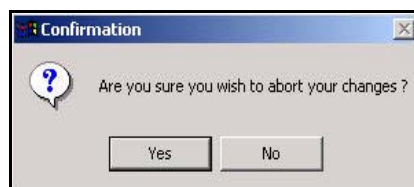

Table/List Window

Double click on a line item in the list (as shown) to open its corresponding record as shown below.

Record Window

Prompt/Confirmation Messages

Folder Tabs

Many of the record windows in the Futura software applications contain a series of tabs. These tabs allow you to access different parts of the record.

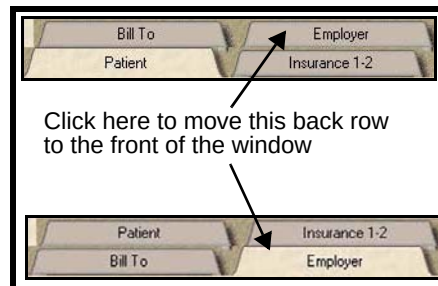

Example:

When you open a Patient record from the Patients table, the window will display with the first page of the record (also known as the Patient folder tab on the record). You can then click on other tabs to enter or change other information for that same patient.

In addition, if there are 2 rows of tabs, when you click on a folder tab from the “back” row, the entire row will be moved to the front of the window.

The screenshot shows a 'Patient' window with a tabbed interface. The tabs are arranged in two rows: the top row contains 'Bill To', 'Employer', 'Balance', and 'Emergency'; the bottom row contains 'Patient', 'Insurance 1-2', 'Insurance 3', and 'Supplemental'. The 'Patient' tab is currently selected. The form contains fields for personal information (Name, Address, City, State, Zip, Phone, Sex, Birth Date, Signed Date, Release, % Disc), medical information (Ref Source, Ref Phy, Prim Phy, Specialist, Location, Note), and insurance information (Company ID, Insurance 1-2, Insurance 3, Supplemental). At the bottom, there are buttons for 'Save', 'Apply', 'Cancel', and 'Images', along with an 'Options' link.

2 rows of tabs appear in the Patient records.

Click on a folder tab to display the corresponding portion of the record.

This block contains three stacked screenshots of the 'Patient' window, each showing a different tab selected. The top screenshot shows the 'Patient' tab with fields for Name, Address, City, State, Zip, Phone, Work, and Email. The middle screenshot shows the 'Insurance 1-2' tab with fields for Name, Address, City, State, Zip, Phone 1, and Phone 2. The bottom screenshot shows the 'Employer' tab with fields for Height, Weight, Birth Date, Death Date, Recall For, Monthly Payment, Other Spec, Attorney, Last Invoiced, Last Statement, Last Serviced, and Employment Information. It also includes a 'Spouse Information' section with fields for Name, Employer Name, Spec. Sec., Phone, Date of Birth, Death Date, Work, Retire, and Sex.

Controlling Windows

When you have a window open in the application, you can do several things with it:

Close

Every window in the application can be closed by using this button that appears in the upper right corner. Depending upon what you are doing, this may or may not be a good idea. If you close a window without using the Apply or Save buttons (see page 3-8), any changes you made will not be stored. However, when you are finished working with a table you will want to use this method to close the window.

IMPORTANT!

It is important to close the windows in the order in which they were opened. This will prevent any inadvertent loss of new or edited information. If you have several windows open at one time, you may not recall the order that you opened them. Therefore, the best and easiest method for closing them in the appropriate order is to press the **Esc** key on your keyboard. Each time you press this key, the next window in the sequence will close. However, a window cannot be closed using this method if it is minimized (see below).

Minimize

Sometimes you may want to move a table or record out of the way without closing it. You can use the minimize button to essentially “hide” the window until you need to access it again. Once you click on this button, you will see only the title bar of the window at the bottom of your monitor screen.

Maximize

Once you minimize a window (see above), you can click on this button to return it to its original size.

Example:

This is how a minimized window will appear at the bottom of your monitor screen.

HINT:

The windows you will see and use in the Futura software applications make multitasking very simple because you can keep several windows open at one time. This allows you to move from one window to another without having to open and close them each time.

Manually Resize

At times you may want to resize a window (either enlarge or reduce) rather than minimize or maximize it. If the window is minimized, you will need to maximize it before you can resize it using this method.

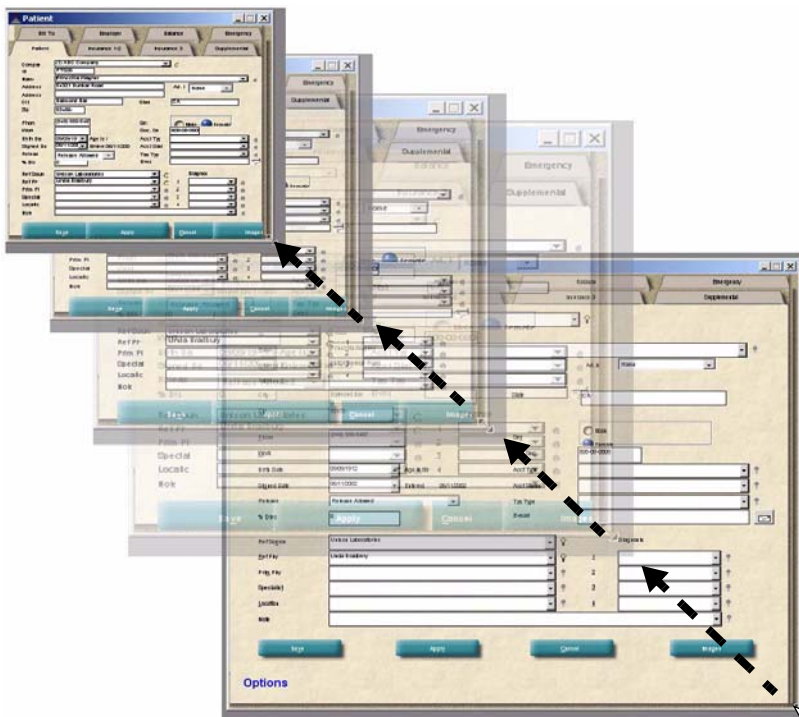

NOTE:

Once you close the application, any resizing of windows will not be saved. Resizing only lasts during the current session. The windows will open at their normal size each time you access the Futura application.

1. Move the mouse/cursor over any corner or border of the window you want to resize until the cursor turns into the resize arrow.
2. Click and drag on the resize arrow to manually change the size of the window.
3. Release the mouse button as soon as the window is the size you want it to be.
 - *Once you release the mouse, the window will stay at that size until you resize it (again), maximize it, minimize it, or close it.*

Example:

 Click and drag the resize arrow to change the size of the current window.

IMPORTANT!

Resizing windows may somewhat change the appearance of some of the field labels.

Move

While you may not want to close, minimize or resize a window in anyway, you may want to move it to a part of the screen that doesn't obstruct your view from something else. This is easily done.

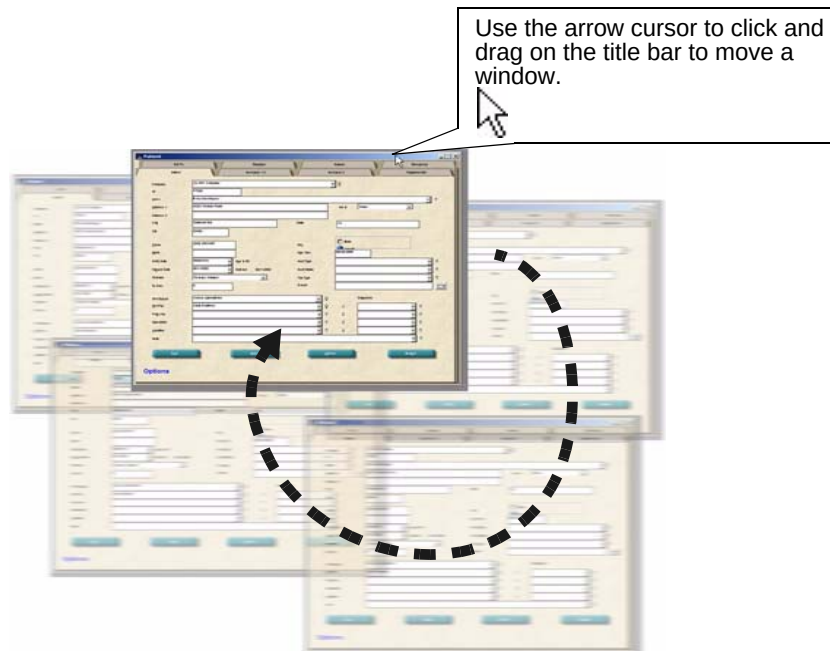

NOTE:

Once you close the application, any movement of windows will not be saved. The relocation of windows only lasts during the current session. The windows will open at their normal location each time you access the Futura application.

1. Move the arrow cursor over the title bar at the top of any window.
2. Click and drag on the bar to move the window wherever you want on the monitor screen.
3. Release the mouse button as soon as the window is where you want it.
 - *Once you release the mouse, the window will stay at that position until you move it, or close and reopen it.*

Example:

NOTE:

The following list of buttons contains only those buttons that are common throughout the application. There are some areas in the Futura software applications that have other buttons, but those will be defined when the process is described later in this guide.

SHORTCUT

The underlined letters that appear on some of the buttons provide you with a keyboard short cut for that task. This is an alternative to using the mouse to click on buttons (see page 3-13).

Example:

The Cancel button has an underline under the "C" in Cancel. This means that if you hold the Alt key while pressing the letter "C" key, the unsaved changes you made will be cancelled.

OR

The "V" in Saved is underlined. Therefore, if you hold the Alt key while pressing the letter "V" key, the any information or changes you have entered will be saved.

For your convenience, a complete listing of these keyboard shortcuts are listed on the inside back cover of this guide.

Buttons

There are a few kinds of buttons that appear within the application. For the most part, they each have a label that clearly indicates their function.

WHAT DOES IT LOOK LIKE? (WHERE DOES IT APPEAR?)	WHAT DOES IT DO?
 (in records)	Use this button to save changes to a record WITHOUT closing the record. In this way, you can continue editing various information in the same record without having to reopen it each time. You can go from folder tab to folder tab in order to quickly add, change, or delete information as needed. Example: When editing patient information, you can go the appropriate record, enter a new work number, click Apply to save the information, then go directly to the Employer folder tab and enter any new employment information there. You can then click Apply again and go to another folder tab to edit information, or use the Save button.
 (in records)	This button allows you to cancel any unsaved changes to a record. Example: When editing a transaction, you realize after making several changes (without clicking Apply or Save), that you have made the changes to the wrong transaction record. You can click Cancel to remove the unsaved changes and return the record to its previous status.
 (in lists)	You can use this button to delete any highlighted line item from within a table. Example: You find out that one of your specialists, Sara Page is retiring. You can go to the Specialists list, click on (select) Ms. Page's name, and click Delete. The specialist's name will be deleted from the Specialist list.  IMPORTANT! • Once you delete an item from a table, it cannot be recovered. Be SURE you want to delete the item before attempting to do so. • In addition, if you attempt to delete a record from a list that is cross referenced in another record or table, you will be unable to complete the deletion. However, the system will allow you to hide the line item so that it will no longer appear in the list, but will remain within the system where other records can still relate to it (see page 3-23).
 (in lists)	This button can be a real timesaving device. It allows you to “copy” a record, change information on the copy and save it as a new record. Example: It may sometimes be the case that you have an insurance company with 2 or 3 (or more) locations. Since all of the information for the insurance may be the same except for the mailing address, the Duplicate tool saves you from having to enter all of the information 2 or 3 (or more) times. You can enter the information for one insurance location, save it, then use the Duplicate key, change only the address information, and save it. You can do this for each location.
 (in lists)	You can use this button to open and edit any selected record in a table. Example: A patient calls to let you know she has changed her address and phone number. You would simply pull up your patient list, locate her name, and click the Edit button to open her record so that you can change her contact information.

WHAT DOES IT LOOK LIKE? (WHERE DOES IT APPEAR?)	WHAT DOES IT DO?
 (in lists)	Click this button to display a new (blank) record for the corresponding list (table). You can then complete the record, click Save and you have “inserted” a new record in the current list. Example: Each time you want to add a new patient, you will need to go to the Patient’s table, click Add/Insert, then enter the appropriate information, and click Save.
 (in prompt windows only)	This button will appear in many prompt windows that appear when you need to make a decision about the current procedure. Example: When you try to close a window without saving changes, a prompt window will ask you if you are sure you want to close the window without completing the changes. You can click No to prevent the window from closing so that you can save any changes.
 (in records)	Very similar to the Apply button (see page 3-8), this button saves any new information or changes you have made and closes the current window. Example: Once you have entered the basic patient information on the Patient folder tab in the Patient window, you can click Save to store that information and automatically close the record.
 (in lists)	This button appears when you access a table from a record. Once you open the table from which you will make a selection, this button appears at the top, and allows you to click on the line item you need, then click on this button to put that item into the current record. Example: When needing to input an HCPC code in a transaction, you can display the HCPC listing, highlight the HCPC code you want to use, then click Select to place the selected code in the field.
 (in prompt windows only)	This button will appear in many prompt windows that appear when you need to make a decision about the current procedure. Example: When you try to delete a line item from a table, a prompt will display to ask you to confirm that you really want to make the deletion. You then click Yes to delete the item.

Additional System Conventions

WHAT DOES IT LOOK LIKE? (What Is It Called?)	WHAT DOES IT DO?
 (check box) The spacebar can be used to select a check box.	A check box will always appear next to a specific setting or options. When you click on a check box, a check mark will appear () to indicate that the setting or option is selected. Unlike a radio button, a check box indicates that you can choose more than one option. Example: On the Patient record “Bill-to” folder tab, you can choose “Legal Guardian” and/or “Use as Insured”
 (radio button) The arrow keys (←↑→↓) can be used to select a move from one selection to the next.	Radio buttons appear whenever you need to make a choice between two or more options or settings. Example: On the Patient record, you need to use the radio button to indicated whether the patient is a male or a female.
 (dropdown list arrow) F2 can be used to display a drop down list.	A dropdown list arrow will appear when you have a list of specific information from which to choose to fill in a field on a record. When you click on the arrow, the dropdown list will appear. You can then select the information you want to have appear in the corresponding field. Example:  HINT  This arrow appears beside date fields. When you click such an arrow, you will display a calendar from which to choose a date (see page 3-12).
 (quick look) Ctrl + S can be used to display an associated source record.	The light bulb appears next to fields that have a source record associated with them. When you click on the light bulb, the corresponding source record will be displayed. You can review and/or edit the source record as needed (see page 3-1). IMPORTANT!  Be sure to check with your system administrator before making any changes to the source record. Example: The light bulb appears next to the referring physician file in the patient record. When you click on the light bulb, the record associated with the specified physician will be displayed.

WHAT DOES IT LOOK LIKE? (What Is It Called?)	WHAT DOES IT DO?
 (text field)	Text fields appear throughout Futura software applications and most records have several for various purposes. These are the fields for which you cannot go to another table or record for information. You must enter the information into the text fields as appropriate. However, in most cases, if you make a selection for another item from another table, the text fields will automatically be filled in if the information appears elsewhere in a related table. Example: You go to the Patient record Employer folder tab. If no phone number is listed for the employee, you can enter it directly into the field. However, if you choose an Employer that has already been entered into the system from some other record, the phone number will automatically be filled in if such a number exists within the system for that employer.

Using Basic System Functions and Features

Basic Menus and Submenus

You will be using menus and submenus to “control” your work in the Futura software applications. Each menu contains a list of options, functions, and features that allow you to perform each task. The main menu labels appear at the top of the screen.

From the main menu:

1. Click on the menu label to display the corresponding menu listing.
2. Click on a menu item to display the corresponding window or list.

OR

Click ► next to a menu item to display its corresponding submenu.

3. Click on the submenu item to display the corresponding window or list.

Examples:

Menus

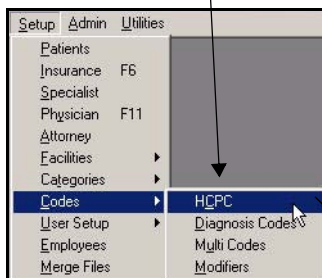

Click on a menu item to display the corresponding window or list.

Submenus

Click ► on a menu item to display the corresponding submenu.

Click on a submenu item to display the corresponding window or list.

Keyboard Commands (Hot Keys)

Many of the items that appear in the menus have keyboard commands that allow you to use the keyboard to open certain windows without having to use your mouse to scroll through the menus. In addition, as mentioned previously (see page 3-8), there are also buttons that have keyboard commands that allow you to use your keyboard instead of your mouse to perform specific tasks.

For some users, the keyboard is a much quicker way to accomplish certain functions. However, some users prefer using the mouse. It will all depend upon your own preference and work habits as to which method you will use. A list of all the keyboard shortcuts available in Futura software applications can be found on the inside back cover of this guide. The most common keyboard commands/hot keys are listed below:

Most Common Futura Hot Keys

HOT KEY	FUNCTION
Tab	Moves the cursor from field to field. The Enter key does NOT work for this purpose.
Shift	Opens a selected item/record in a list for editing.
Insert	Opens a new (blank) record.
F2	In a list, it puts the cursor in the search field at the top window. In a record, it opens a drop down list.
Home	Clears the current entry in the search field so you can try a new search.
Alt + V	Saves the information in the currently displayed record.
Ctrl + S	Opens the associated source record.

NOTE

A more complete list can be found on the last page of this user guide (after the index)

Search Feature

Futura software contains a quick and easy search feature that allows you to search either very generally or very specifically for any item stored in a table in the database (see page 3-1). You can search by letters or numbers; names, phone numbers, or social security numbers. Once you enter the search “criteria”, the Futura software will display any entries that contain matching information.

The more specific the criteria, the fewer results will be displayed and the shorter the search time. However, the more general or generic the search criteria, the greater the number of entries that will be returned and displayed.

HINT:

Search criteria simply refers to the individual or series of characters (letters or numbers) that you enter in the search field. The amount of information you enter into the search field helps you to specify and/or limit the search.

The more criteria you use, the shorter the search time, the fewer the results. The fewer criteria you use, the longer the search time, the more results will be displayed.

Examples:

You need to find all specialists that have the area code 949. You enter “9 4 9” into the search field, and any entries that have the matching number series of 949 will be displayed. However, if you enter just “9”, then all entries that have a 9 somewhere in them will be displayed.

OR

You need to find all the patients whose last name is Davis. You can simply enter the name Davis and the entries with that name somewhere in them will be displayed. However, if you only enter “D a” as your search criteria, then ANY name with a “Da” in them will be returned (e.g., David, Daniels, Darcy, etc.)

In the Search field of any table window:

NOTE

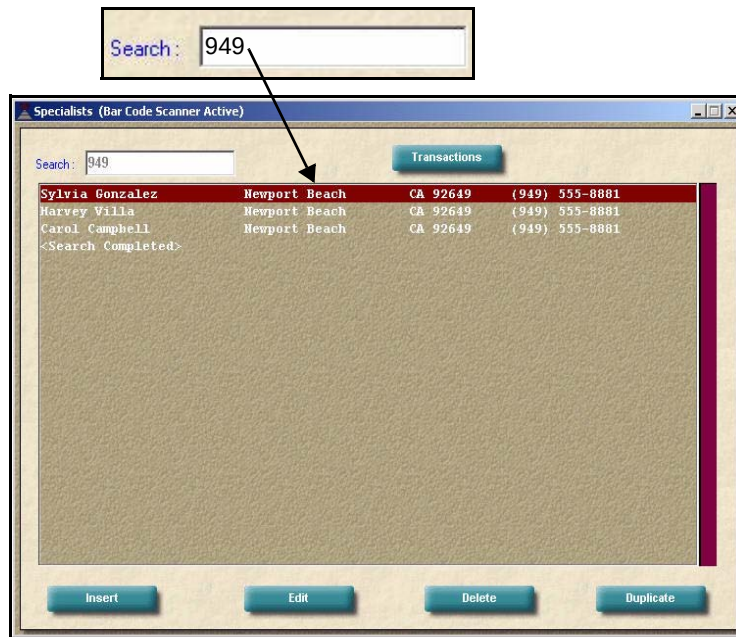

No cursor appears in the search field. As soon as you open a specific table, you can begin typing an entry.

1. Enter the letter(s) or number(s) for which you want to search.

Shortcut

F2 puts the cursor in the search field at the top window.

- This automatically displays any matching information stored in that table.

HINT:

You can also use the search feature for mutli-part searches.

Example:

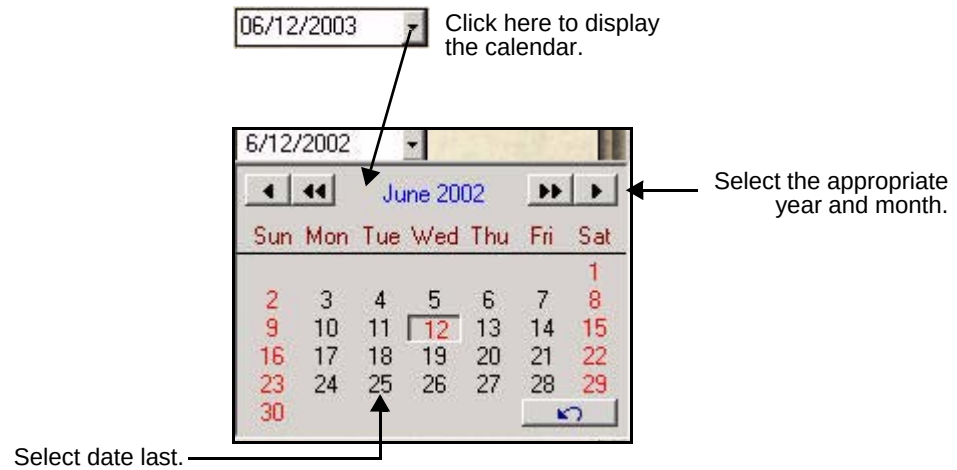

If you want to find Alan Jones, but are not sure how Alan is spelled (e.g., Allen, Allan, etc.), you can enter "Al Jones".

The space can be used to separate two sets of characters for which you are searching. This means that if you enter Al Jones, the system will search for a matching set of characters in the table for "Al" and a separate group of matching characters for "Jones".

2. Press the Home key (on the keyboard) to clear the search field if you want to try another search with different criteria.

Calendar Option

Instead of having to enter a date in a particular field using the keyboard, Futura software provides you with a calendar function that allows you to select a specific date and time to enter into a field. Date fields will always appear with a “drop down arrow” next to them.

1. Click  to display the calendar.
2. Select the appropriate month and year.

Use	to select:
	the next month
	the previous month
	the next year
	the previous year
	today's date
(arrow cursor)	the date (This will also automatically close the calendar.)

3. Use  (arrow cursor) to select a date and automatically close the calendar.

Managing the Quik Click Menu

The Quik Click Menu is a great way to put and use shortcuts to the functions you use the most in the Futura software. Instead of having to go to the main menu to find a task that you perform several times a day, you can add the shortcut to the Quik Click menu and have it at your convenience any time you need it - with a double click of the mouse.

When you first install and open the Futura software application, the Quik Click menu appears automatically. The default Quik Click menu includes a “General” folder that includes shortcuts for appointments, patients, and transactions. Not only can you add to these or delete the existing short cuts, but you can add folders, move and add short cuts between folders.

IMPORTANT!

- The Quik Click menu will need to be activated for each user. If you do not see a Quik Click menu on your screen, contact your system administrator to have him/her activate it for you.
- Once your Quik Click menu has been activated, it will appear each time you log on. Any customizations you make to it will appear. In addition, ANY changes you make to your own Quik Click menu will not affect the Quik Click menu of any other users whether they are logged in or not.

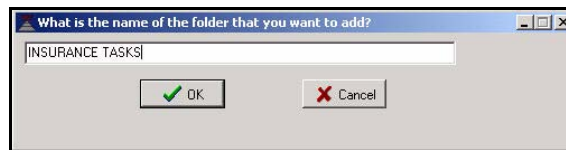

Folders in the Quik Click Menu

Add a Folder to the Quik Click Menu

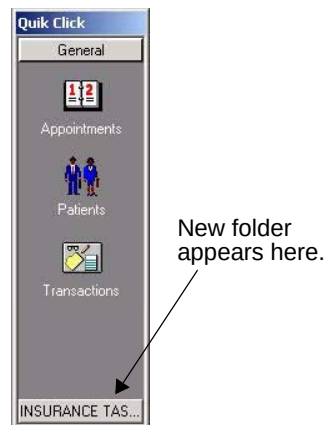

1. Right click on the Quik Click menu to display a list of options.
2. Click on “Add a New Folder” to display the folder naming window.

3. Enter the name of the folder you want to add.

4. Click Save to save the folder in the Quik Click Menu.

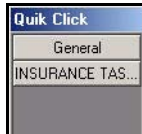

Delete a Folder from the Quik Click Menu.

1. Click on the folder you want to delete to move it to the top of the Quik Click menu.
2. Right click on the folder to display a list of options.
3. Click on “Delete the Folder” for the folder you want to delete to remove it from the Quik Click menu.

Rename a Folder in the Quik Click Menu.

1. Click on the folder you want to rename to move it to the top of the Quik Click menu.

2. Right click on the Quik Click menu to display a list of options.

3. Click on “Rename the Folder” option to highlight the selected folder to be renamed.

4. Enter the new name for the specified folder.

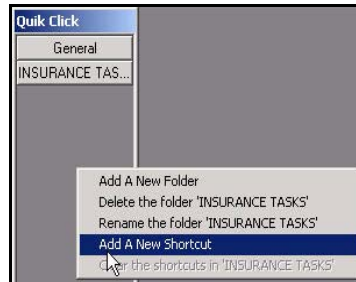

5. Press Enter (on your keyboard) to save name in the Quik Click menu.

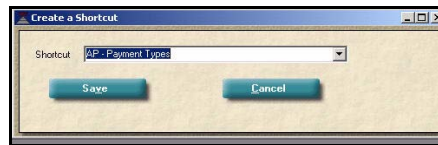

Shortcuts in the Quik Click Menu

Add a Shortcut to a Folder in the Quik Click Menu

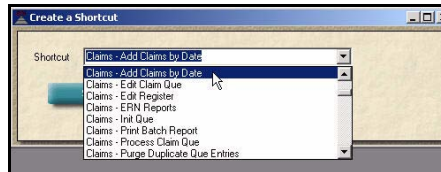

1. Click on the folder to which you want to add a shortcut.
 - The folder will appear at the top of the Quik Click menu once you have selected/opened it.
2. Right click on the Quik Click menu to display a list of options.

3. Click on Add a Shortcut to display the Add a Shortcut window.

4. Click on the drop down arrow to display a list of tasks.

5. Select the task for which you want to add a shortcut.
6. Click Save to add the shortcut to the specified folder in the Quik Click Menu.

Delete a Shortcut from a Folder in the Quik Click Menu.

1. Click on the folder that contains the shortcut you want to delete.
 - The folder will appear at the top of the Quik Click menu once you have selected/opened it.
2. Right click on the shortcut icon (picture) you want to delete to display a list of options.

Click directly on the shortcut icon (picture) to display the list of options.

3. Click on “Delete the Shortcut” to remove the shortcut from the Quik Click menu.

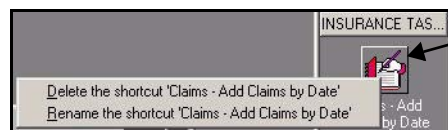

NOTE

To clear all of the shortcuts in a specific folder, you right click inside the folder and select the “Clear shortcuts” option for that folder. The shortcuts will be removed, but the folder will remain in the Quik Click menu. You can re-add shortcuts as needed.

Rename a Shortcut in a Folder in the Quik Click Menu

1. Click on the folder that contains the shortcut that you want to rename.
 - The folder will appear at the top of the Quik Click menu once you have selected/opened it.
2. Right click on the shortcut icon (picture) you want to rename to display a list of options.

Click directly on the shortcut icon (picture) to display the list of options.

3. Click on “Rename the Shortcut” option to highlight the selected shortcut name to be changed.

4. Enter the new name for the specified shortcut.

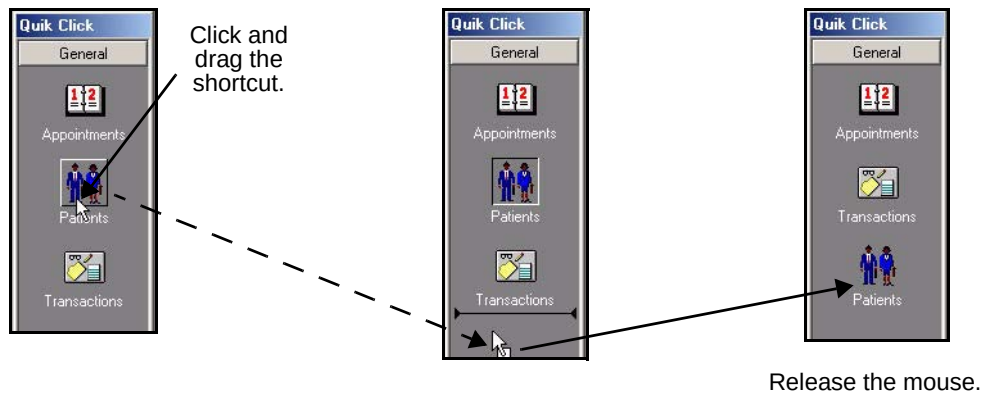

5. Press Enter to store the shortcut with its new name in the Quik Click menu.

Move a Shortcut

1. Click on the folder that contains the shortcut you want to move.
2. Click and drag the shortcut to the place to which you want to move it.
 - *You can even move shortcuts from one folder to another.*
3. Release the mouse when you have placed the arrow in the place to which you want to move the shortcut.

Using the Calculator

The calculator included in the Futura software is just like any other desk or computer calculator. It allows you to do simple addition, subtraction, multiplication, and division, as well as percentages and square roots.

You can use the mouse to make selections and perform calculator operations and/or you can use the NUM LOCK function on your keyboard and input the numbers and operations directly from there.

Accessing the Calculator

When accessed, the calculator will appear in its own window on top of any Futura software application windows you have open.

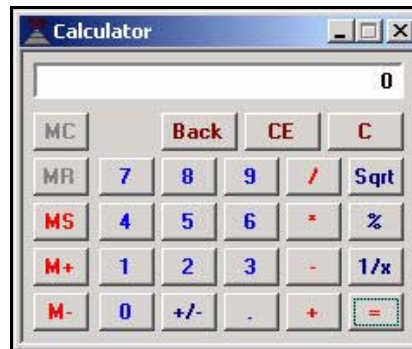

To open the calculator at any time:

1. Go to Receivables ► Calculator.

SHORTCUT

You can also use Ctrl + Alt + C to open the calculator.

HINT

The calculator window can be moved, resized, minimized, or closed just like any other window in the Futura software.

- See “Folder Tabs” on page 3-4

2. Use the mouse or keyboard to perform operations as described above.

Hiding Items

If you attempt to delete an item (i.e., patient, specialist, etc.) from a list that is associated with another list, the system will prevent you from the deletion. However, Futura software will offer you the chance to hide the item so that it will no longer appear in the table, preventing it from being assigned inadvertently in the future, but it will be seen in association with other lists.

- See page 3-8 for more information.

Example:

You receive information that Sandra Brown has decided to see a specialist in another town (closer to her home), and you want to remove her from the patient list. However, she did come into your office twice and therefore is associated with 2 transactions. Since this is the case, the system will not allow you to delete her from the system. However, when you attempt to delete the patient, you will

be alternately presented with the chance to “hide” her from the patient list.

By hiding patients no longer associated with your office, you can keep your patient list short which allows for better efficiency. Then, in the case that Sandra returns to your practice, you can easily return her information to the patient list. If you decide not to hide his information, then her name will continue to appear in the patient list. In either case, Sandra will still be associated with those 2 transactions.

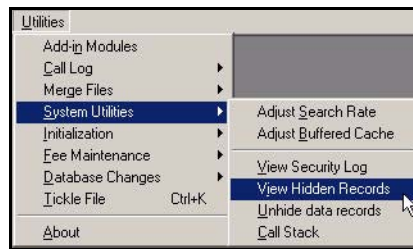

NOTE:

Hidden records will STILL appear in reports.

View Hidden Records

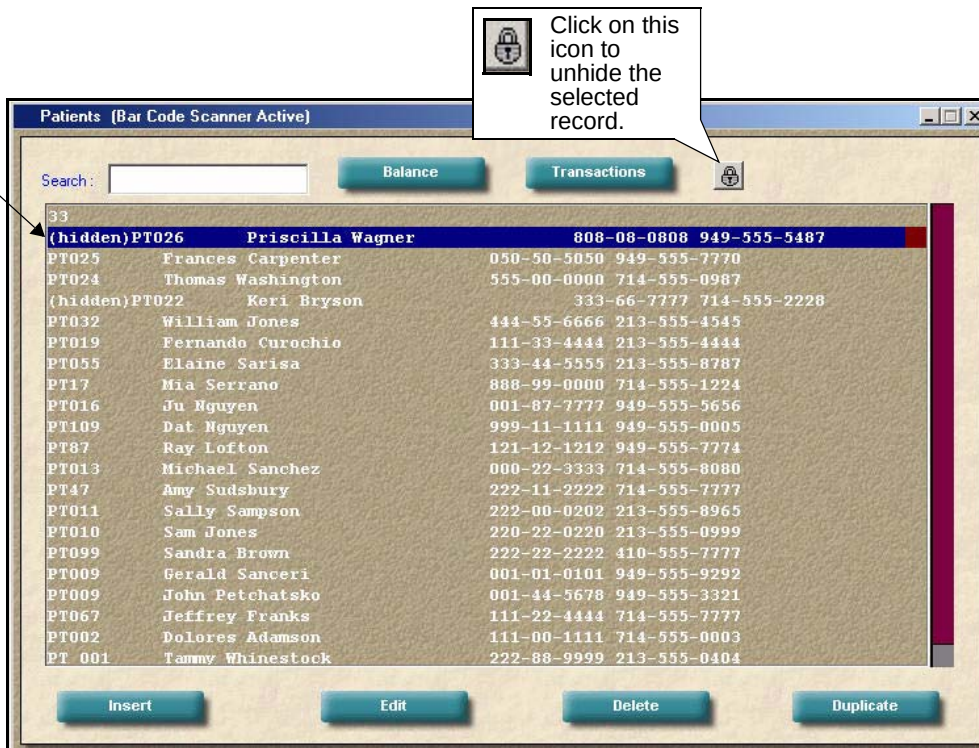

You can easily view any items you have hidden by following the steps below. They will be designated as “hidden”.

1. Go to Utilities►System Utilities to display the submenu.

2. Select View Hidden Records to display hidden records in their corresponding lists.

Hidden records now appear in the corresponding list and is designated as “(Hidden)”.

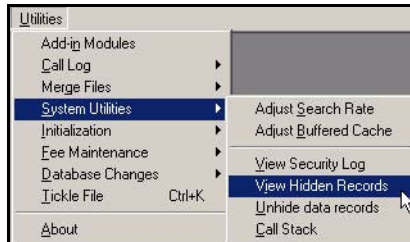

“Unhide” Hidden Records

You can easily and quickly unhide a specific record or all records.

Unhide Specific Records

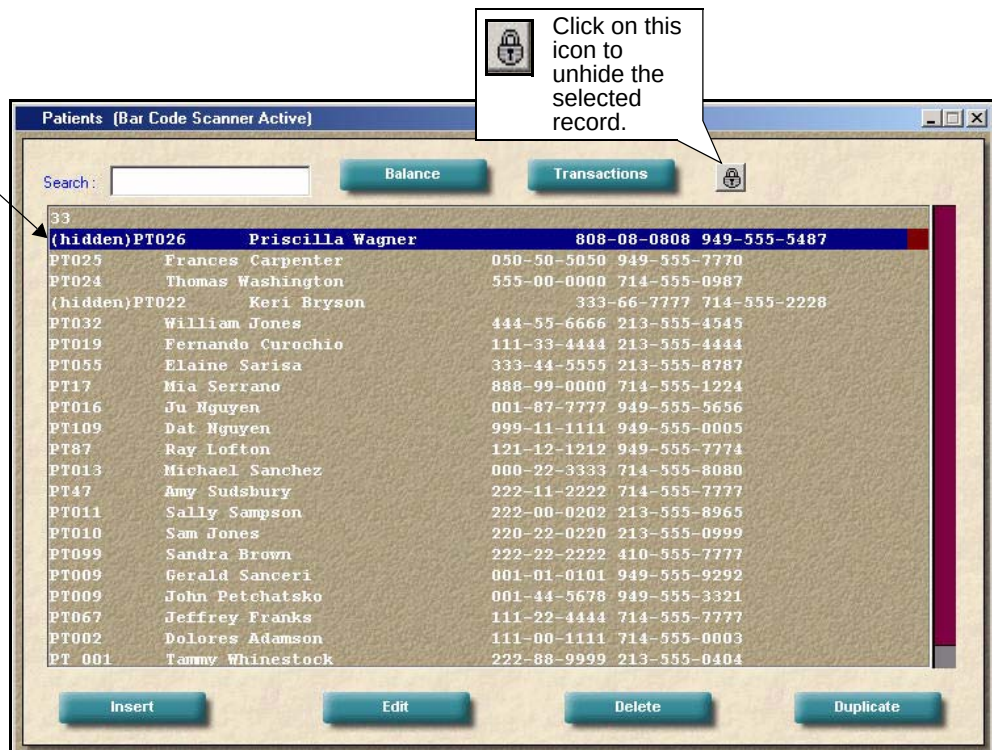

If you only need to unhide certain records, while keeping other hidden records still hidden, follow the steps below:

1. Go to Utilities►System Utilities to display the submenu.

2. Select View Hidden Records to display hidden records in their corresponding lists.

Hidden records now appear in the corresponding list and is designated as “(Hidden)”.

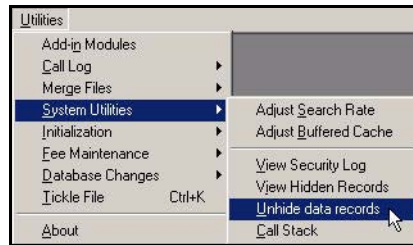

3. Click to select the record you want to unhide.
4. Click  at the top of the screen to unhide the selected record.

Unhide All Records

If you find that you need to “unhide” all hidden records at any point, you can use the procedure below to return them to their corresponding list.

1. Go to Utilities►System Utilities to display the submenu.

2. Select Unhide Data Records to display hidden records in their corresponding list in their original state.

Attaching and Formatting Notes with Notepad

Futura software provides you with a way for you to add notes to almost every record you create in the system. In addition to adding or attaching these notes, you can set up a guide for various note (i.e., a preformatted layout for specific items such as special forms, etc.). Most notes you create in Notepad, you will be associating with the appointment viewer.

NOTE:

- Your access to this feature may depend on how your user rights are set up. Please check with your system administrator if there is any question about using notes.
- Any notes associated with appointments will be printed out when the appointment list is printed (see page 5-16).

Attaching a Note to a Record

Adding a note to a record is a very simple process. In addition, you can edit, use merge codes, insert specific information automatically, and print a note as needed.

From any record window:

1. Go to Options►Notepad to display the Notepad window.

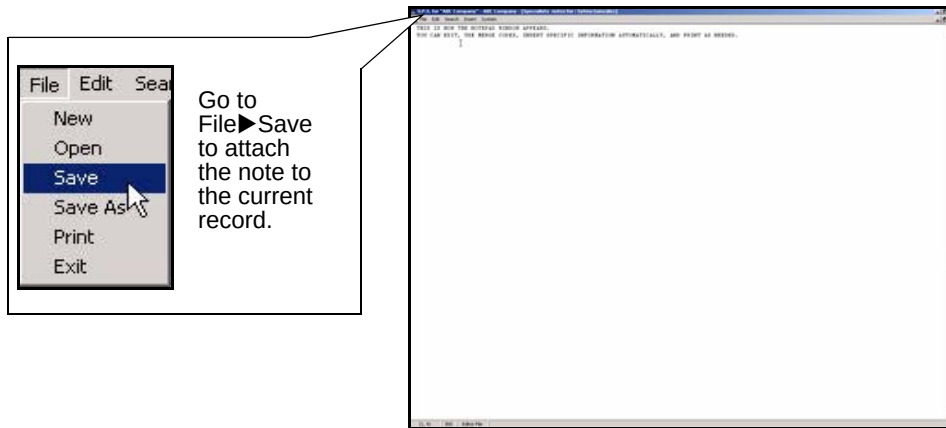

SHORTCUT

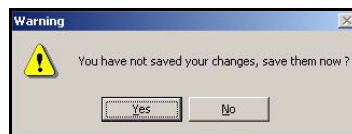

You can also use F3 to open the Notepad window.

2. Enter and edit text as you would in any other word processing application.
 - *While you can edit the text, you will not be able to change the font or paragraph styles.*

3. Go to File►Save to attach the note to the current record.

- Once you save a note, it will stay permanently attached to the record. Each time you open Notepad, the saved note will appear. You can edit it from there as needed.
- You can also go to File►Save as to store the note in a specific location for later use with another record or for reference.
- If you attempt to close the Notepad window (i.e., using the  in the upper right corner or the Esc key), a prompt will appear to ask if you want to save your changes:

Click Yes to attach the note to the current record, or click No to discard the changes.

Using Tickle Files

Tickle files are reminders that you can set for most of the various records in the database. Once set, these reminders will appear as a new window on your monitor. When the reminder appears you can use the snooze option to close the window temporarily. Once the specified “snooze time” is over, the window will reappear to remind you again. These are best and most commonly used for broadcast messages.

Example:

You can send a message as a reminder to yourself or another user: “You need to remember to call a specialist to confirm a patient’s appointment with her. You can set up a tickle file from that specialists record that will appear to remind you to make the call”.

Create a Tickle file (message/reminder)

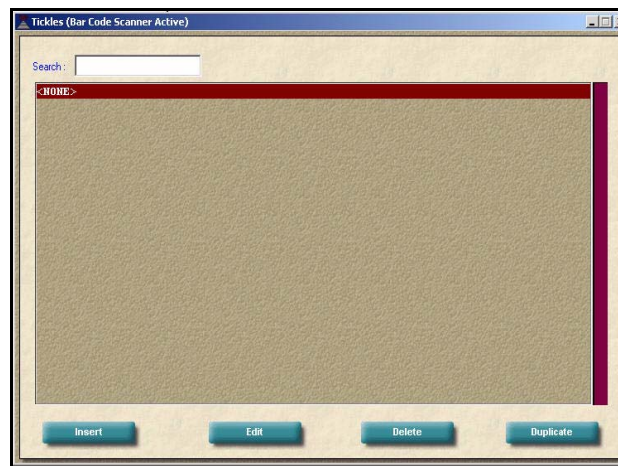

Although you can create a tickle file directly from any record that has it as an option, you can pre-define a series of tickle files using the Utilities menu:

NOTE

- You can even set up a reminder for another user.
- All tickle files are viewable by all other users.
- In addition, you can use the Snooze option. This option will appear on the reminder popup window. Once you select it, you can enter the amount of time (in minutes) you want to wait before the reminder appears again. Then, click OK to close the window and postpone your reminder.

1. Go to Utilities►Tickle File to display the Tickle File table
 - *Until you create one or more tickle files/reminders, “<None>” will be the only item in the list as shown below.*

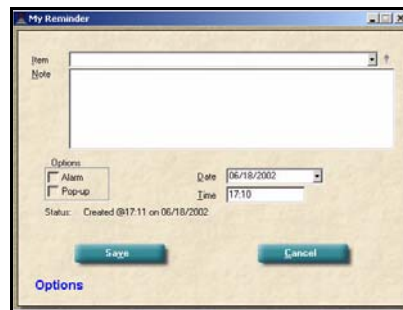

2. Click Add/Insert to display a message will appear to ask you if you want to set this reminder for another user.
 - If you select Yes, the Select Users table will appear. You can select the appropriate user from that table and go on to step 3 below. If you want to display the Reminder window (see below) to create the reminder for yourself, select NO.

If you want to create this reminder for another user, click Yes to display a list of users. Click on the name of the user for whom you want to create this reminder, and click Select to display the Reminder window. Now, go to step 2 below.

Click No to create this reminder for yourself, and go to step 2 below.

REMINDER WINDOW

3. Select the item you want to use (e.g., patient, vendor, etc.).
4. Enter the content you want to have appear on the reminder (e.g., "Call to confirm patient's appointment tomorrow at 4pm").
5. Select the date on which you want this reminder to appear.
6. Enter the time at which you want this reminder to appear.

7. Select the alarm and/or pop up options

- If you select the alarm option, a tone will sound to let you know that you have a reminder. If you select the pop-up option, a separate window will appear with the content.

**NOTE:**

Depending upon the speed of your network, this message may take a few minutes to appear.

8. Click Save to store the reminder.

- Once the reminder appears, you can select Snooze, or click Acknowledge to close the reminder with no further reminders.

**NOTE:**

Even after you click Acknowledge, the messages will remain in Utilities►Tickle File so that you can refer back to them at any time.

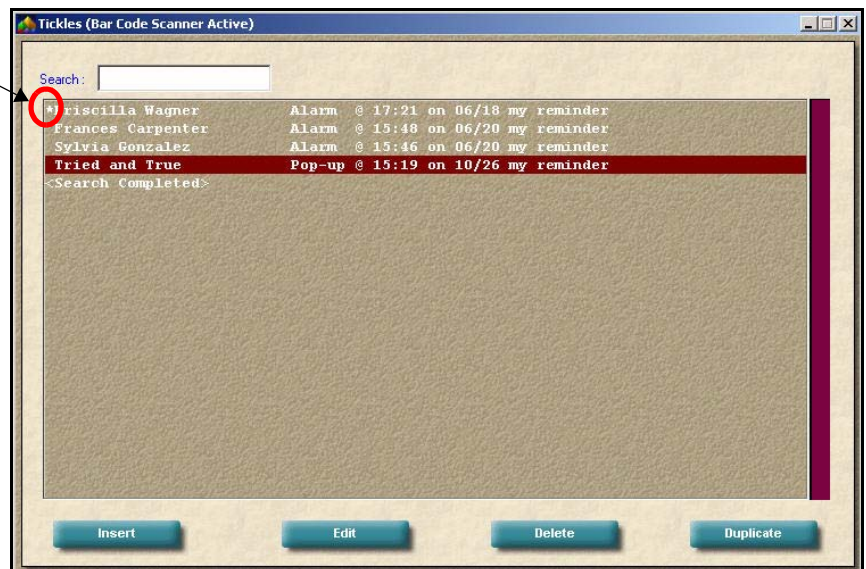

View and Acknowledge Tickle Files

Tickle files can be viewed in either of two ways depending upon how your user rights are set up. If you are the administrator, you can set yours or another's user rights to allow all (everyone's) tickle files to be viewed. Otherwise, the user will only be able to see his/her own tickle files at any one time.

View Your Own Tickle Files

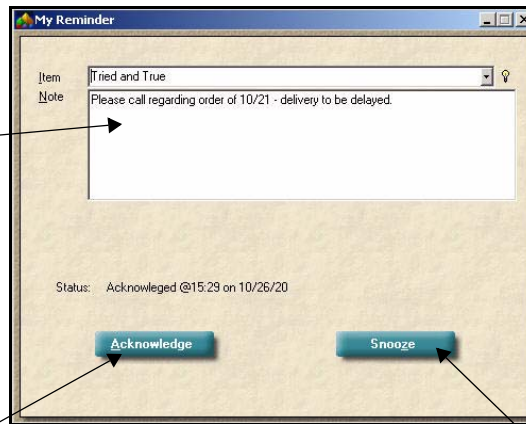

1. Go to Utilities►Tickle File to display the list of tickle files that have been created for you.
 - Reminders will appear according to items selected in step 3 on page 3-30.

An asterisk appears next to those tickle files that have been acknowledge by you. You can easily view a tickle file without acknowledging it.

2. Double click on the tickle file/reminder you want to view.

Any details entered for this reminder will appear here. You can also click in this area and enter any additional notes in response, about actions taken, etc.

Click here to designate this reminder as acknowledged. Once you do this, an asterisk (*) will appear next to this reminder in the list as previously shown.

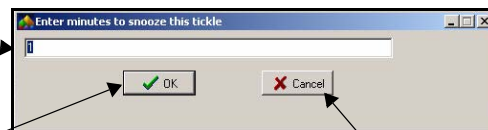

You can click here to "postpone" this reminder and have it appear at a designated number of minutes later.

3. Enter any details in the Notes section as needed (e.g., returned call and found out that order will be delayed by 3 days. Vendor said supplies are unavailable at this time and will contact if any further delay is expected).
4. Click Acknowledge to record that this reminder was reviewed and/or acted upon if appropriate.
 - *The Reminder window will close.*

OR

Click Snooze if you want to postpone the acknowledgement of this reminder to display the Snooze window.

Enter the number of minutes you want to postpone this reminder.

Click OK to close this window, as well as the Reminder window and have the reminder reappear according to the specified number of minutes.

Click Cancel to close the Snooze window and return to the reminder.

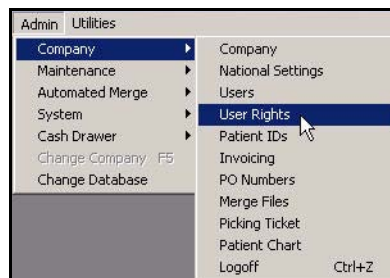

NOTE:

The Snooze window allows you to enter the number of minutes you want to postpone this reminder. Enter the number of minutes as shown above and click OK to close the Snooze and Reminder windows.

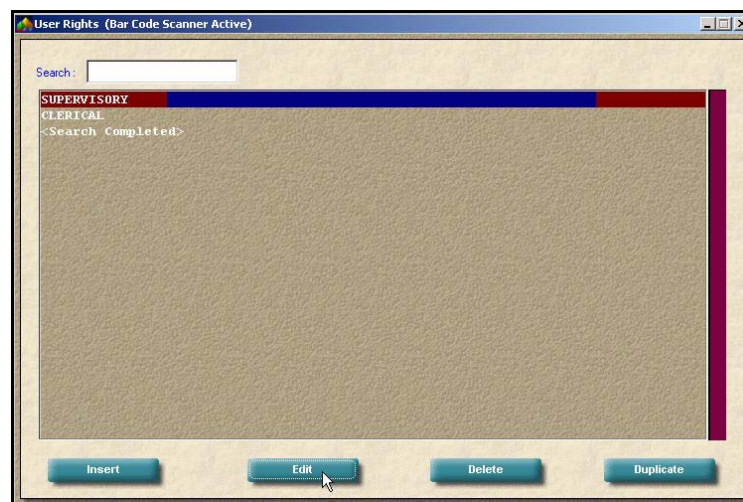

View All Tickle Files

In order to view all of the tickle files that exist within the system, you need to have the User Rights set up to allow you to do so. Once this setting is made, you can use the same procedure shown on page 3-31 to view and access any tickle file/reminder that appears in the list.

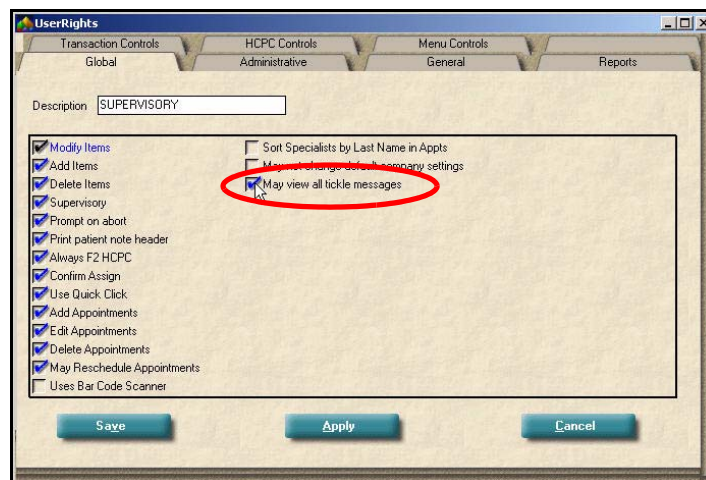

1. Go to Admin►Company to display a list of options.

2. Select User Rights to display the User Rights list.

3. Double click on the user type you want to allow to view all tickle files (e.g., supervisor or clerical, etc.).
 - The Global tab will appear by default when you open the User Rights list.

4. Click on View All Tickle Files to allow the designated user type to view all tickle files.
5. Click Save to store the new setting.

SECTION 4

GETTING SET UP

What You'll Find In this Section:

- Page 4-1 ■ How to Log On and Off
- Page 4-3 ■ Changing Your Password
- Page 4-4 ■ Configuring Your Printer
- Page 4-6 ■ Setting Up Basic
Information

NOTES:

Logging On and Off Futura Software

Each time you log in to the system, you will follow the same basic procedure as shown below.

In addition, it is important for you to log off each time you have finished a session in Futura as this allows the system to know who is using or not using the system, as well as clearing any unused information.

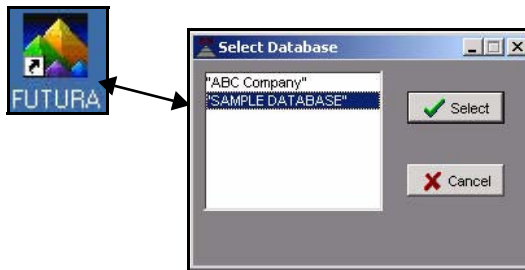

Logging on

IMPORTANT!

Steps 1 and 2 as shown below are only applicable if you have more than one database associated with your Futura system. If you only have one database, you will be directly prompted for your login information (see step 3 below).

1. Double click the Futura icon that appears on your desktop to start the application and display the “Select Database” window.
 - Any database associated with your system will appear in the list.

2. Click on the **database** you will be using for this session.

NOTE:

If you are setup with rights to access more than one database, you can go to Admin►Company►Change Database, then choose the appropriate database.

3. Click **Select** to display the “Sign In” window.

NOTE:

- When your system administrator installs the Futura software application, he/she will assign you a permanent user ID and a temporary password. You will receive this information before you start the Futura software on your system as you will need it to log in. Although you cannot change your user ID, you can easily change your password after the first time you log in (see page 4-3).
- The first time you log into the system, and until you change the login and password, you will need to use the following: login= SUPERVISOR and password is PASSWORD - both all upper-case.

4. Enter the user ID provided by your system administrator.
5. Enter the password provided by your system administrator.
 - *Once you log in the first time, you can easily change your password (see page 4-3).*
6. Click Logon to display the Futura software main window.

Log Off

Because you are working in a database, it is VERY important that you log off each time you finish working in the Futura software application. Until you log off, the system will maintain your connection, thereby potentially slowing the system down. Depending upon how your system is set up, the more users accessing the system at one time, the more likely it is that the database system will run slower.

IMPORTANT!

In order for the administrator to perform the daily close (including the daily backup) or restoration of files (as needed), everyone must be logged off the system (see page 5-117).

From the Admin menu:

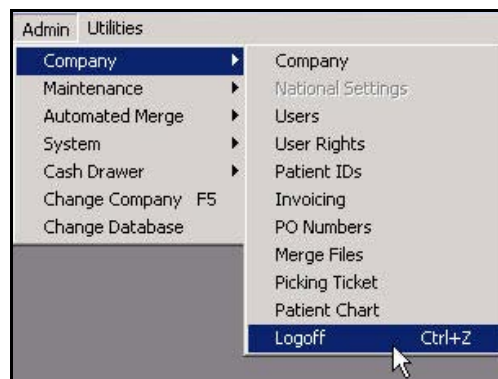

1. Complete and/or Save any transactions as needed.
2. Close any windows that are open.

IMPORTANT!

You will not be able to properly log off the system until all windows in the Futura software application are closed. Remember that it is very important that you close the windows in the appropriate order (see page 3-5).

3. Go to Company►Logoff to automatically disconnect from the database and return to the sign on screen.

4. Click  on the sign in screen to close the Futura application.

SHORT CUT

Ctrl + Z allows you to log off from Futura software and return you to the sign on screen.

Alt + X closes the sign on screen to close the Futura application.

Changing Your Password

Once you log in using the user ID and password assigned to you by your system administrator, you can quickly and easily change your password. Your password has a twofold purpose:

- **It allows the system to identify you specifically.**
- **It provides for better security by preventing an unauthorized person from entering the system using your user ID.**

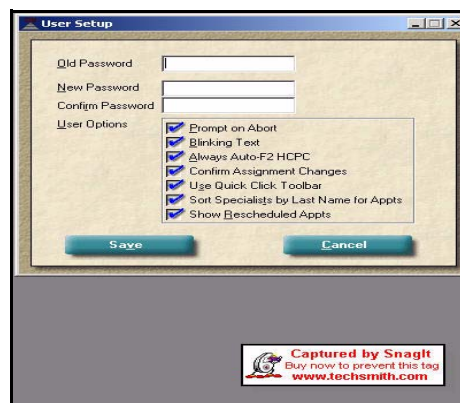

You should choose something that is easy for you to remember, but not something that just anyone would know. In addition, it is not a good idea to write your password down. However, you may want to write down a hint to help you remember it.

Example:

Your name is probably not a good password. However, the last six digits of your social security number might be better as it is not something you tend to allow people to know. And, if you want to write down a hint of what that is, simply make a note “the last 6 digits of my social security number”. You may also want to use your mother’s maiden name, your favorite pet’s name, or your drivers license number.

From the Setup menu:

1. Go to User Setup►User Setup to display the User Setup window.

2. Enter your current/old password.
3. Enter the new password you want to use.
 - *Your password cannot exceed 20 characters. It is recommended to keep your password between 4 and 8 characters in order to make it easier to remember and quicker to enter.*
 - *As you enter your password into the text fields, asterisks (*) will appear instead of the characters you type. This prevents anyone from seeing your password by looking over your shoulder as you enter it.*
4. Enter your new password again to make sure you have entered it correctly.

IMPORTANT!

- Be sure to choose a password that is easy for you to remember, but not something someone would likely know.
 - Be sure not to give your password to anyone or write it down.
 - Be sure to enter your new password carefully. If you enter it incorrectly your system administrator will have to reset it for you which may take some time.
5. Click Save to complete the setting, store your new password, and close the window.

Changing Your Printer Configuration

It is possible that your system administrator will give you access to your printer configuration. These settings will allow you to connect several printers to your workstation. Since you may be required to use different forms for various tasks (e.g., invoices, statements, insurance forms, etc.), you may need to choose different printers throughout out the course of a day.

The window in which you will be making these settings provides you with a list of predefined printing formats from which to choose (e.g., report printing, label printing, invoice printing, etc.)

IMPORTANT!

Be sure you have the appropriate printer drivers installed. Check with your System Administrator if you have any questions.

NOTE:

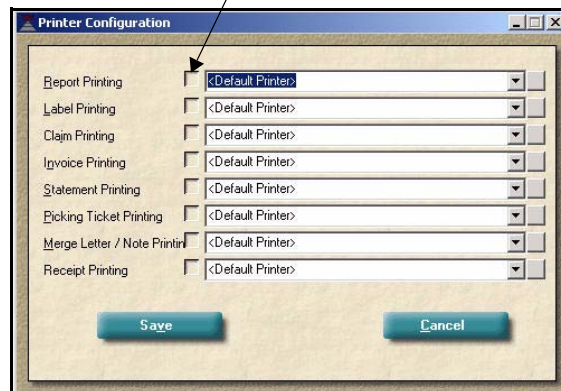

- If you select the default setting, the system will use the printer that has been designated as the default printer in your operating system printer setup.
- If you select the check box, you will be prompted each time you print this document type as to which printer you want to use. If you do not select this check box, the default printer will be used.

From the Setup menu:

1. Go to User Setup►Printer Configuration to display the Printer Configuration window.

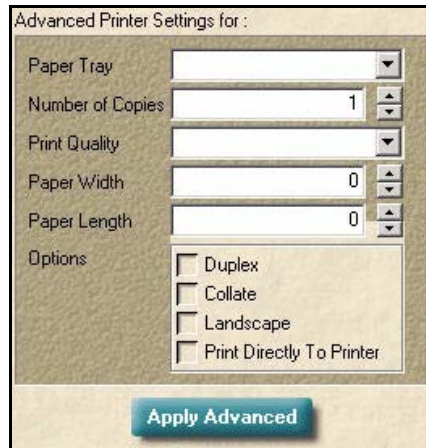

If you select this check box, you will be prompted each time you print this document type as to which printer you want to use.

If you do not select this check box, the default printer will be used.

2. Click ☒ to display a list of available printers.
3. Scroll down the list and select the appropriate printer for each print job type.
4. Click Save to store the settings.

5. Click  to display the Advanced Printer Settings window.

6. Make printer settings as appropriate:
 - *Paper tray allows you to select a specific paper tray from the printer (this allows you to manually feed forms and/or choose from trays with different sized paper (e.g., tray 1 may contain white letter sized paper, tray 2 may contain blue letter sized paper, and tray 3 may contain A4 or statement sized paper)).*
 - *Number of copies allows you to specify how many copies of the same item from the same paper tray you want to print.*
 - *Print quality will depend on the printer selected for printing. Some printers are able to print draft copies vs. fine or high quality printouts, while other printers do not.*
 - *Paper width and length allows you to customize the paper size you use as long as the printer can accommodate that size (e.g., you can set the width and length to Tabloid sized paper - 11" X 17", if the associated printer cannot hold paper that large, you will be unable to print appropriately).*
 - *Options allow you to choose a variety of additional settings. Please refer to your Windows user guide for more information about printer configurations.*
7. Click Apply Advanced to save any advanced settings you made.
8. Click Save to save all new printer settings and close the window.

Using a Matrix Printer

IMPORTANT!

When your system is installed by your Futura representative, he/she will help you make sure your matrix printer is set up to work with the Futura forms. Once that is set up, DO NOT use the paperfeed knob or the micro-line feed to adjust the form. Because the form feeding is set up to automatically feed to the precise location at which printing will begin for each form, you should only use the TOP of Form (TOF), or the Tear Off or PCUT (Paper Cut), or the Load/Eject button (the name and location of this button will differ depending upon the model of printer you are using).

- In addition to using this method to line up the paper, these internal printer command buttons allow you to avoid wasting a full page. These buttons advance the paper up to a tear off point. Once there, you can press it again to load it back into the printers Top of Page setting.

Setting Up Basic Information

Although you can add information to the system at any time, it is a good idea to set up some of the basic information ahead of time. In addition to adding patient's (see page 5-24) to the database, you might also want to add:

- **Employees (from your company in all facilities)**
- **Specialists (in all facilities)**
- **Insurance Company Information**
- **Physicians**
- **Attorneys**
- **Facilities**
- **Categories**
- **HCPC Codes and Fee Schedules**

IMPORTANT!

When you add information, particularly names and addresses in any of the above records, be sure that you do not add extra characters (e.g., periods and commas). These would be treated as unrecognized characters by the system and may interfere with the electronic processing of your information. The only exceptions are provided below.

- Only middle initials (not whole middle names) will be recognized by the system. If for some reason you **MUST** add a middle name for an employee, physician, patient, etc., you can do so by adding it as a hyphenated suffix to the first name (e.g., Paul William Mulder would need to be added as Paul-William Mulder).
- Another situation you need to consider is when a suffix needs to be added to the last name (e.g., Jr, Sr, III, etc.). In such a case, you will need to add a comma prior to adding the suffix (e.g., George Neeman, Sr).

Examples:

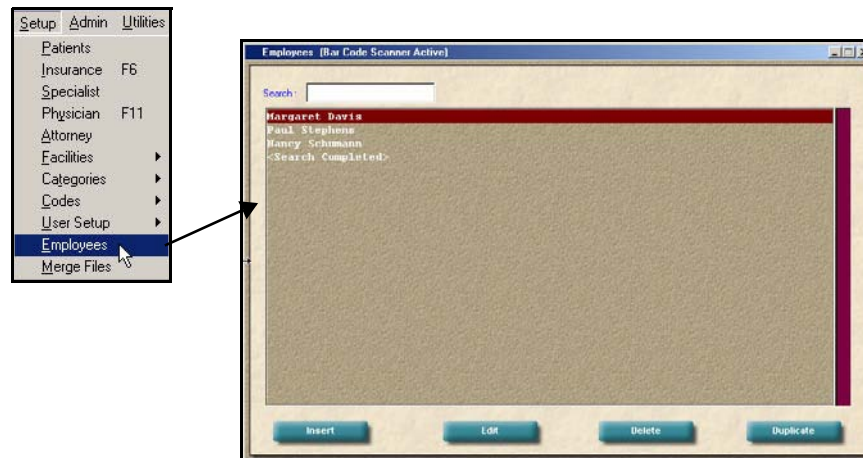

NO	YES
Paul William Mulder	Paul-William Mulder
Paul W. Mulder	Paul W Mulder
Paul Mulder Jr.	Paul Mulder, Jr
60 Talister Court, Apt. 12	60 Talister Court Apt 12

The above two instances are the only time that extra characters can be used and recognized by the system.

Add Employees

If you have one or more people in your office staff, either in the same location or separate locations, it's a good idea to enter them into the system. Employees can be associated to various tasks performed within the application.

1. Go to Setup►Employees to display the Employees list.
 - Until you enter information for one or more employees, "<None>" will be the only item in the list

2. Click Add/Insert to open a new (blank) Employee record.

3. Enter the appropriate information into the fields.
 - Please see "Employee Record" on page A-15 for more information about the fields on this record.
 - When entering the employee name, be sure to enter it first name first and last name last.

NOTE:

There is no need to include any information in the employee record other than the employee name. As long as you have the employee name entered, the employee record can be accessed through any associated fields and records (e.g., pulling employee information into the Call Log - see page 5-18). All other information can be omitted if necessary.

4. Click Save to store the employee information.
 - Repeat steps 2 through 4 for every employee you need to enter.

Add Facilities

If your company uses a variety of patient locations (i.e., facilities at which a patient is seen) or makes use of any other outside facilities for which billing and claims is done (i.e., those locations at which work for a patient is performed or from which items are purchased for a patient), you can add them all into the system to make billing and record keeping easier.

NOTE:

You will also be able to use this list to access transactions with a specific facility.

1. Go to Setup►Facilities to display the Facility submenu.

2. Select "Patient Locations" as appropriate to display the Patient Locations list.

OR

Select "Outside Facilities/Labs" as appropriate to display the Lab/Outside Facility list.

- Until you enter information for one or more locations or facilities, "<None>" will be the only item in the list

3. Click Add/Insert to open a new (blank) facility record.

The 'Patient Location' form contains the following fields: Name (dropdown), Address 1, Address 2, City, State, Zip, Phone 1, Phone 2, Fax, Contact, Email, Department, Facility (dropdown), POS, HCFA-1500, Block 32 Compliant checkbox, Specialist (dropdown), Initial, Last, Next, and buttons for Save, Cancel, and Options.

OR

The 'Outside Lab and Facility' form contains the following fields: Name, Address 1, Address 2, City, State, Zip, Phone, Contact, Email, Department, ID, and buttons for Save, Cancel, and Options.

4. Enter the appropriate information into the fields.
 - Please see "Facilities Record" on page A-19 for more information about the fields on this record.
5. Click Save to store the facility information.
 - Repeat steps 2 through 4 for every facility you need to enter.

Add Specialists to the System

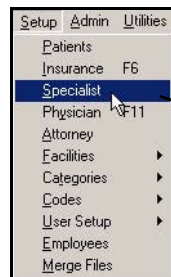

Because everything you do in the system will be associated with a specialist in your office (whether you have one or many), you must enter the specialists' information into the system. To increase efficiency, it is recommended that you do this as one of the first things you do.

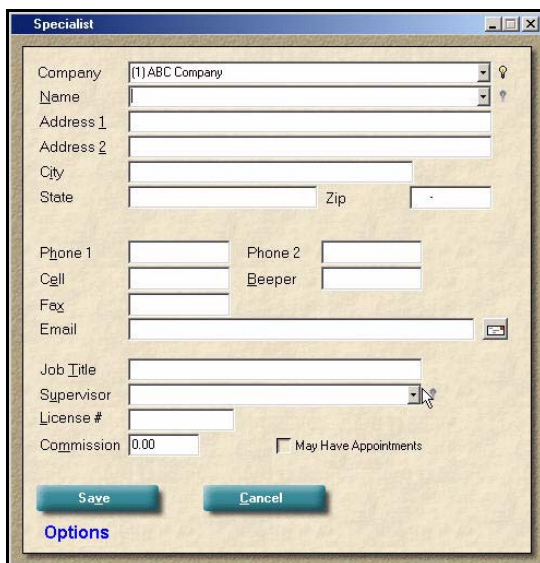

NOTE:

- You can enter all Specialists associated with your company, no matter what the facility.
- You will also be able to use this list to access transactions and balances associated with a specific specialist.

1. Go to Setup►Specialist to display the Specialists list.
 - Until you enter information for one or more specialists, "<None>" will be the only item in the list.

2. Click Add/Insert to open a new (blank) Specialist record.

A screenshot of a software window titled "Specialist". The window contains a form with the following fields: "Company" (a dropdown menu showing "(1) ABC Company"), "Name" (a text field), "Address 1" (a text field), "Address 2" (a text field), "City" (a text field), "State" (a dropdown menu), "Zip" (a text field), "Phone 1" (a text field), "Phone 2" (a text field), "Cell" (a text field), "Beeper" (a text field), "Fax" (a text field), "Email" (a text field with an envelope icon), "Job Title" (a text field), "Supervisor" (a dropdown menu), "License #" (a text field), and "Commission" (a text field showing "0.00"). There is also a checkbox labeled "May Have Appointments". At the bottom of the form are two buttons: "Save" and "Cancel", and a link labeled "Options".

3. Enter the appropriate information into the fields.
 - Please see "Specialist Record" on page A-93 for more information about the fields on this record.
 - When entering the specialist's name, be sure to enter it first name first and last name last.
4. Click Save to store the specialist's information.
 - Repeat steps 2 through 4 for every specialist you need to enter.

Add Insurance Companies

It is more than likely you will be dealing with multiple insurance companies (including Medicare, Medicaid, etc.) on a day-to-day basis. In addition and for the most part, you will be handling information for the same group of insurance companies regularly. It's a good idea to enter any insurance information you may know ahead of time to save time during a busy office visitation day.

HINT

- Remember that this information will also be used for claims and billing purposes. So, once you enter it here, you can associate it with patients, physicians, etc., within the system without having to repeatedly enter the same information.
- If you will be receiving any payments from hospitals, it is recommended that you enter the hospital information in the insurance list to make posting and tracking of hospital payments easier.

NOTE:

You will also be able to use this list to access transactions and balances associated with a specific insurance company (see page 5-54).

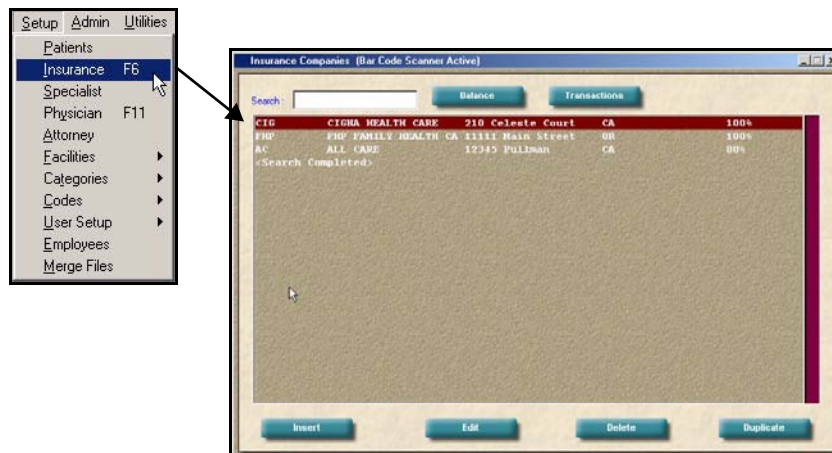

1. Go to Setup►Insurance to display the Insurance (company) list.

SHORT CUT

F6 opens the Insurance Company List.

- Until you enter information for one or more physicians, "<None>" will be the only item in the list.

2. Click Add/Insert to open a new (blank) Insurance record.

The screenshot shows a window titled "Insurance Company" with the following fields and controls:

- Top Section:** Ins ID, Name, Address 1, Address 2, City, State, Zip.
- Buttons:** Save, Cancel, Balance, Form, Provider ID's, Networks.
- Contact Section:** Contact, Phone 1, Phone 2, Fax, Email, Fee Level (dropdown), Pay % (0), Deductible (0.00), Physician ID (UPIN dropdown), Payer ID, Payer Office ID, Provider Id, OCNA #, Plan Code, Group ID.
- Ins Options:** A list of checkboxes including "Accept Assignment" (checked), "Pays Medigap", "BC", "BCBS", "Central Cert.", "Federal Employees", "Federal - Other", "HMO", "Managed Care - Non HMO", "Self Administered", "Title V", "United Health", "VA Plan", "Workers Comp.", "PPO", and "Commercial". A link labeled "Options" is at the bottom left of this section.
- Ins Type:** A group of radio buttons including "Medicare", "Medicaid", "Champus", "Champ VA", "Group Health Plan", "FECA Black Lung", and "Other" (selected).

3. Enter the appropriate information into the fields.
 - Please see "Insurance Record" on page A-25 for more information about the fields on this record.
4. Select the appropriate Insurance Form for this insurance company.
 - See "Adding Insurance Forms" on page 4-13
5. Select the appropriate Provider ID for this insurance company.
 - See "Adding Provider IDs" on page 4-16.
6. Select the appropriate (if any) network for this insurance company.
 - See "Setting Up and Associating Networks for the Current Insurance Company" on page 4-18.
7. Click Save to store the insurance information.
 - Repeat steps 2 through 7 for every insurance company you need to enter.

Adding Insurance Forms

Setting up insurance forms is extremely important since you won't be able to submit claims without them. When you submit claims via the Futura system (either electronic or printed), you do so by selecting the claim form type. The system will automatically then find all the queued claims for the insurance companies associated with that form (see "The Final Step in Processing Claims:" on page 5-109).

From the Insurance record (see step 2 on page 4-12):

1. Click on Form to display the list of available insurance forms for this insurance company.
 - *Until you add one or more forms for the current insurance company, nothing will appear in the list as shown below.*

**NOTE:**

Only one form per insurance company can be added for each company (i.e., Cigna can only have one form for ABC Company).

2. Click Insert to display the Insurance Form record.

The InsForm window contains the following fields and controls:

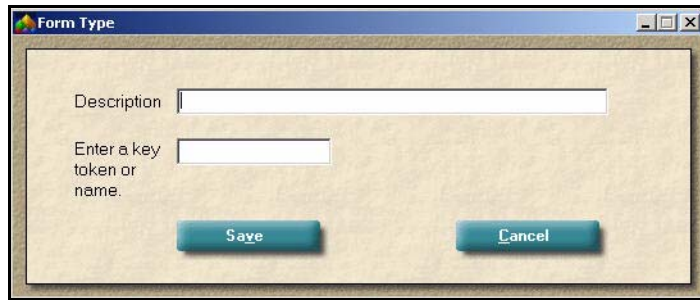

- Company: (1) ABC Company
- Paper Clm.: [Dropdown]
- P. Auth.: [Dropdown]
- Paper Elig.: [Dropdown]
- Elec. Clm.: [Dropdown]
- Elig. Req.: [Dropdown]
- Options:
 - ☐ Print Hard Copy
 - ☐ Bundle Like Codes
 - ☐ Requires Override
 - ☐ Production Approved
 - ☐ ENVOY Par. Provider
- Submitter ID: [Text] Password 2: [Text]
- Password: [Text] UPIN: [Text]
- Submitter Name: [Text]
- Address 1: [Text]
- Address 2: [Text]
- City: [Text]
- State: [Text] Zip: [Text]
- Phone: [Text]
- Contact: [Text]
- Buttons: Save, Cancel

3. Select the appropriate forms for paper claims, prior authorization, paper eligibility, electronic claims, and eligibility requirements from the list.
 - Until you add one or more forms as mentioned above, nothing will appear in the list as shown below.

The Select Form Types window (Bar Code Scanner Active) contains the following elements:

- Search: [Text] [Select]
- List area: Empty
- Buttons: Insert, Edit, Delete, Duplicate

4. Click Insert to display a new (blank) Insurance Form Type record.

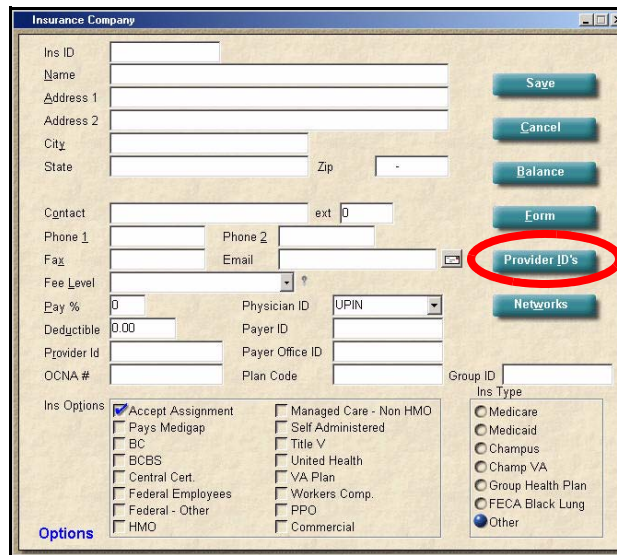

5. Enter a description for the form (e.g., Medicare electronic form).
6. Enter the appropriate token (e.g., HCFANEW.NSF).
7. Click Save to store the new form information and return to the Insurance Form record.
8. Enter the appropriate information into the remaining fields of the Insurance Form record.
 - Please see *"Insurance Form Record"* on page A-31 for more information about the fields on this record.
9. Click Save to store this form information.
 - Repeat steps 1 through 9 for each form for each insurance company.

Adding Provider IDs

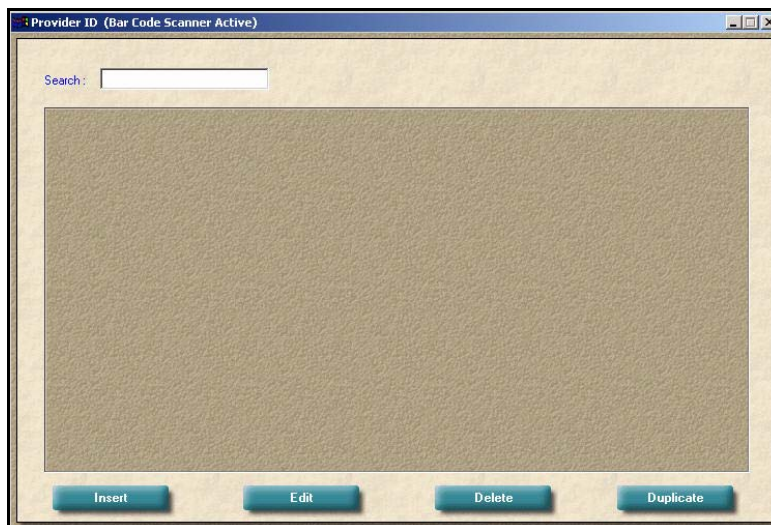

The Provider ID information that you need to specify here is assigned to you by the payor (insurance company). When such information is provided to you, it is important that you enter it into the system using the process as shown below as it is necessary when submitting claims to the payor. It is how they identify and make payments to you from within their own system. In addition, if you have multiple locations or companies in your organization, you can and may have multiple provider IDs.

From the Insurance record (see step 2 on page 4-12):

The screenshot shows a software window titled "Insurance Company". It contains various input fields for insurance information, including Ins ID, Name, Address 1, Address 2, City, State, Zip, Contact, Phone 1, Phone 2, Fax, Email, Fee Level, Pay %, Deductible, Provider ID, OCNA #, Physician ID, Payer ID, Payer Office ID, Plan Code, Group ID, and Ins Type. There are also checkboxes for "Ins Options" such as "Accept Assignment", "Managed Care - Non HMO", "Pays Medigap", "Self Administered", "BC", "Title V", "BCBS", "United Health", "Central Cert.", "VA Plan", "Federal Employees", "Workers Comp.", "Federal - Other", "PPO", "HMO", and "Commercial". On the right side, there are buttons for "Save", "Cancel", "Balance", "Form", "Provider ID's" (which is circled in red), and "Networks".

1. Click on Provider IDs to display the list of available provider IDs.
 - Until you add one or more provider IDs, nothing will appear in the list as shown below.

The screenshot shows a software window titled "Provider ID (Bar Code Scanner Active)". It has a search bar at the top with the text "Search:". Below the search bar is a large, empty rectangular area, likely intended for a list of provider IDs. At the bottom of the window, there are four buttons: "Insert", "Edit", "Delete", and "Duplicate".

2. Click Insert to display a new (blank) Provider ID record.

A screenshot of a software dialog box titled "Provider ID". The dialog box has a light beige background and a blue title bar. It contains three input fields: "Company" (a dropdown menu), "Fee Level" (a dropdown menu), and "Provider ID" (a text box). To the right of the "Provider ID" field is a checkbox labeled "Accept Assignment". At the bottom of the dialog box are two buttons: "Save" and "Cancel".

3. Select your (or another appropriate) company name.
4. Select the appropriate fee level from the existing list.
5. Enter the provider ID as provided by the payor.
6. Click on the Accept Assignment option as appropriate
7. Click Save to store the new ID and return to the Insurance Form record.
8. Enter the appropriate information into the remaining fields of the Insurance Form record.
 - Please see "Insurance Form Record" on page A-31 for more information about the fields on this record.
9. Click Save to store this form information.
 - Repeat steps 1 through 9 for each form for each insurance company.

Setting Up and Associating Networks for the Current Insurance Company

If you are going to be submitting claims to a payor that belongs to a network, your claims processing will be more effectively utilized if you set up the network using the following procedure. First you will set up an insurance company, then create a network. You can link a single insurance company to multiple networks.

Example:

Blue Cross/Blue Shield (BC/BS) may be one of the first insurance companies you set up. However, along with being an independent payor, BC/BS may also be part of several different networks (Point Network Group, OPMC, Pacific Network Group, etc.). It may also be that Cigna, Metlife, and USA Health belong to one or more of these groups as well. However, the billing will be submitted directly to the payor (insurance companies like BC/BS rather than the network).

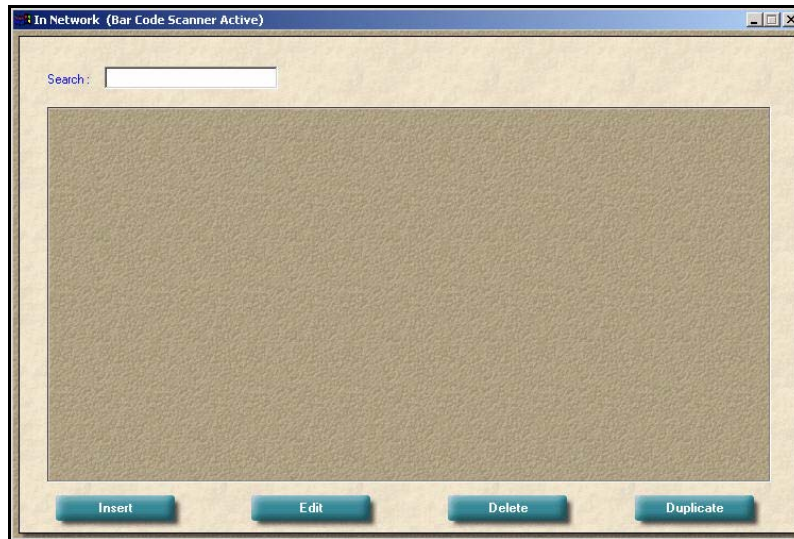

NOTE:

When you are submitting a claim, you will be using the provider ID provided to you by the payor (insurance company)

From the Insurance record (see step 2 on page 4-12):

The screenshot shows a software window titled "Insurance Company". It contains various input fields for company information, contact details, and insurance specifics. On the right side, there are several buttons: "Save", "Cancel", "Balance", "Form", "Provider ID's", and "Networks". The "Networks" button is circled in red. Below the main form area, there are sections for "Options" and "Ins Type" with various checkboxes and radio buttons.

1. Click on Networks to display the list of available network sources for this insurance company (e.g., Point Network Group, OPMC, Pacific Network Group).
 - Until you add one or more in network sources, nothing will appear in the list as shown below.

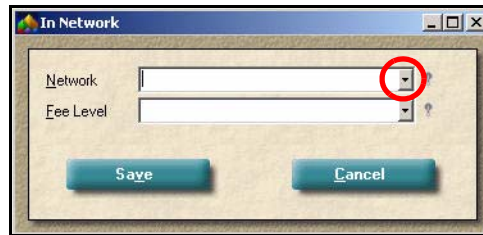

2. Click Insert to display a new (blank) In Network record.

3. Select the network you want to add to the list and associate with the current insurance company.
4. If you do not see the network you want to associate, you can add one to the Network list (see “Adding a Network to the Network List” on page 4-20).
5. Select the fee level you want to associate with this network and insurance company.
6. Click Save to store the new network in the list and return to the Insurance Form record.
7. Enter the appropriate information into the remaining fields of the Insurance Form record.
 - Please see “Insurance Form Record” on page A-31 for more information about the fields on this record.
8. Click Save to store this form information.
 - Repeat steps 1 through 9 for each form for each insurance company.

Adding a Network to the Network List

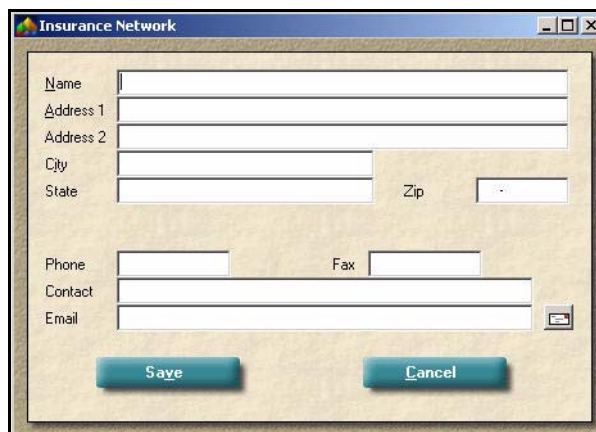

From the In Network record (see step 2 on page 4-19):

1. Click  next to the Network field to display a list of existing Networks.
 - Until you add one more networks to this list, "<None>" will appear in the list as shown below:

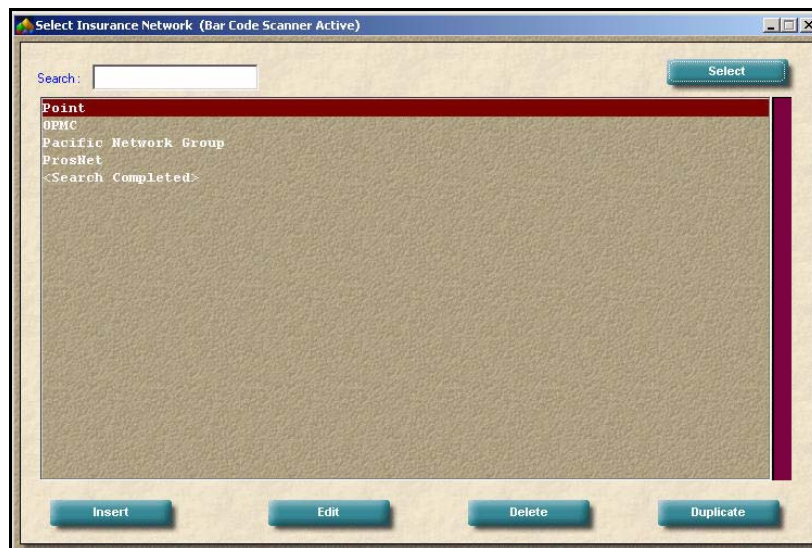

2. Click Insert to display a new (blank) network record.

3. Enter the name of the network (e.g., Point Network Group, OPMC, Pacific Network Group).
4. Enter the address, city, state, and zip code for the designated network (e.g., 10000 4th Street, Costa Mesa, CA, 92626).
5. Enter a phone and fax number for the network.

6. Enter the main contact name (i.e., the person to whom you usually speak if/when you need to contact the network for inquiries or problems).
7. Enter an E-mail address, if appropriate, for the contact at the network.
8. Click Save to store the new network in the Select Network list.

- You can now select from this list to add to your In Network groups list for a specific insurance company.

Add Physicians (Primary/Referring) to the System

When working with patient and transaction information, you will be consistently and regularly working with physician information for both primary and referring physicians. You will also need to use physician information when creating/printing prescriptions as well as a variety of other tasks in Futura. Therefore, it is recommended that you enter as much physician information as you can in the beginning for maximum efficiency. However, remember that wherever you are in the system, you can always add physician information at any time.

- Please see “Physician Record” on page A-63 for more information about the fields on this record.

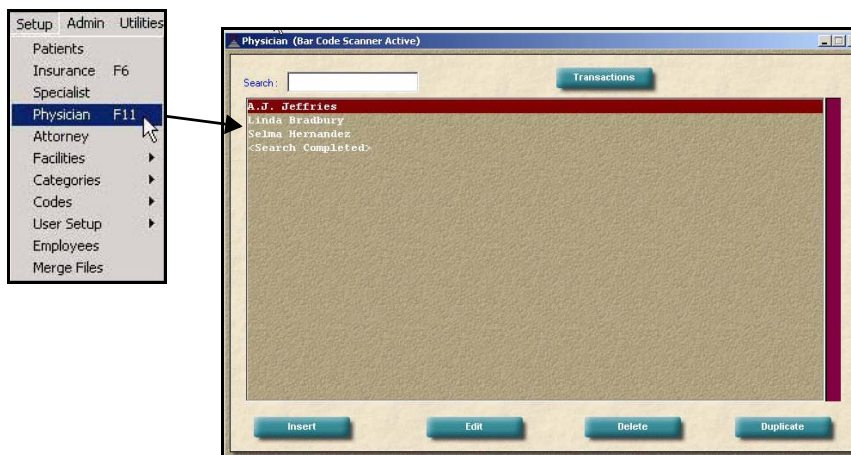

1. Go to Setup►Physician to display the Physician's list.

SHORTCUT

You can also use F11 to open the Physician list.

- Until you enter information for one or more physicians, “<None>” will be the only item in the list.

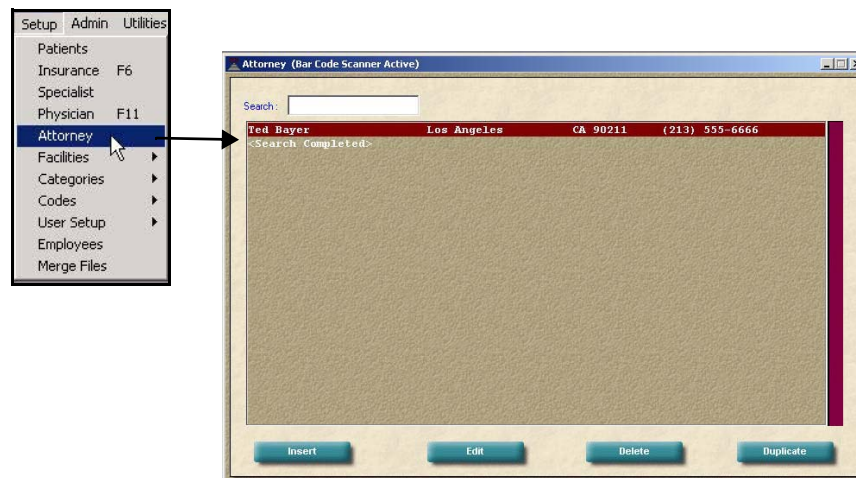

2. Click Add/Insert to open a new (blank) Physician record.

3. Enter the appropriate information into the fields.
 - Please see “Physician Record” on page A-63 for more information about the fields on this record.
 - When entering the physician name, be sure to enter it first name first and last name last.
4. Click Save to store the physician information.
 - Repeat steps 2 through 4 for every physician you need to enter.

Add Attorney Information

While you won't be using or referring to Attorney information as often as you will patient, physician, and insurance information, you will need to record such information from time to time. For better efficiency, it is best to add this information as you receive it as you will need it for various cases involving litigation, workman's comp, etc.

- Please see “Attorney Record” on page A-4 for more information about the fields on this record.
1. Go to Setup►Attorney to display the Attorney list.
 - Until you enter information for one or more attorneys, “<None>” will be the only item in the list as shown below.

2. Click Add/Insert to open a new (blank) Attorney record.

3. Enter the appropriate information into the fields.
 - Please see “Attorney Record” on page A-4 for more information about the fields on this record.
 - When entering the attorney name, be sure to enter it first name first and last name last.
4. Click Save to store the attorney information.
 - Repeat steps 2 through 4 for every physician you need to enter.

Add Categories Items

There are 17 different categories of information that you can associate with patients, insurance, specialists, etc. And within these categories, you can add items.

Create Procedure Codes

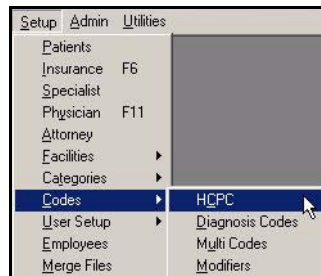

Besides the existing HCPC codes that have already been included in the system for you, you can create and add new codes to allow you to work more efficiently. Procedure codes allow you to summarize and group procedures and other information so that you can easily just pick from the list without having to reenter common information. Some procedure codes you might want to consider are Appointment codes and Commission Fee codes.

Add New HCPC Codes (including Appointment Codes)

Although the Futura software application contains a full list of O & P and DME HCPC codes (to be associated with patient visits, claims, inventory, etc.). You may find a specific or special code that is not in the usual O&P or DME listing. If this is the case, it is very easy to add additional HCPC codes by following the procedure below.

In addition, it is not unusual that these codes do not accurately reflect the purpose for a patient’s visit. Therefore, it is recommended that you create some codes of your own. Futura refers to these as Appointment Codes.

1. Go to Setup►Codes to display the Codes submenu.

2. Select HCPC to display the HCPC code list.

Code	Description	Price
A4214	30 CC STERILE WATER/SALINE	0.00
A4221	MAINT DRUG INFUS CATH PER WK	0.00
A4222	DRUG INFUSION PUMP SUPPLIES	0.00
A4232	SYRINGE W/NEEDLE INSULIN 3CC	0.00
A4253	BLOOD GLUCOSE/REAGENT STRIPS	0.00
A4254	BATTERY FOR GLUCOSE MONITOR	0.00
A4255	GLUCOSE MONITOR PLATFORMS	0.00
A4256	CALIBRATOR SOLUTION/CHIPS	0.00
A4257	REPLACE LENS/SHIELD CARTRIDGE	0.00
A4258	LANCET DEVICE EACH	0.00
A4259	LANCETS PER BOX	0.00
A4265	PARAFFIN	0.00
A4280	BRST PRSTHS ADHSV ATTCHMT	0.00
A4290	SACRAL NERVE STIM TEST LEAD	0.00
A4310	INSERT TRAY W/O BAG/CATH	0.00
A4311	CATHETER W/O BAG 2-WAY LATEX	0.00
A4312	CATH W/O BAG 2-WAY SILICONE	0.00
A4313	CATHETER W/BAG 3-WAY	0.00
A4314	CATH W/DRAINAGE 2-WAY LATEX	0.00
A4315	CATH W/DRAINAGE 2-WAY SILCNE	0.00
A4316	CATH W/DRAINAGE 3-WAY	0.00
A4319	STERILE H2O IRRIGATION SOLUT	0.00

3. Click Add/Insert to open a new (blank) HCPC code record.

Use this option to designate whether the new code will be O&P or DME related.

IMPORTANT!

If you are creating a code other than an appointment code (i.e., an O&P or DME code), you can designate the nature of the code by selecting the O&P or DME option at the top of the page. Switching from one type of code to another will also change the appearance of the record (including differing fields).

4. Select whether the new code will be an O & P or DME code.

NOTE:

Once you create a code as an O&P or DME code, you cannot change the this designation.

5. Enter letters and/or numbers for the code.

NOTE:

Futura recommends that you use APPT as the code for appointment codes as it is easy to remember, recognize, and search for.

6. Enter the appropriate information into the remaining fields.

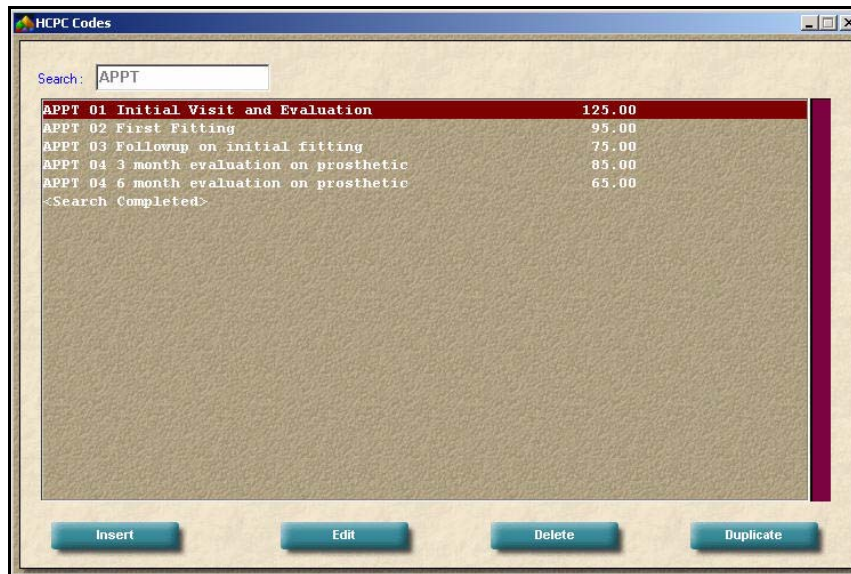

- Please see “Code Record” on page A-12 for more information about the fields on this record.

HINT

- As with all HCPC codes, you can associate Appointment Codes with diagnoses, modifiers, and products by using the corresponding buttons at the bottom of the HCPC record window. Being able to associate these items with an appointment allows you to better and efficiently control your daily business, patient activity, inventory, etc.
- You can also set a default time and color which will then autofill when you create an appointment using the appointment code.
- There is no need to include prices with appointment codes.

7. Click Save to store the new Code.

- Repeat steps 3 through 6 for each new code you want to add.

Add Commission Fees and/or Product Pricing to HCPC Codes

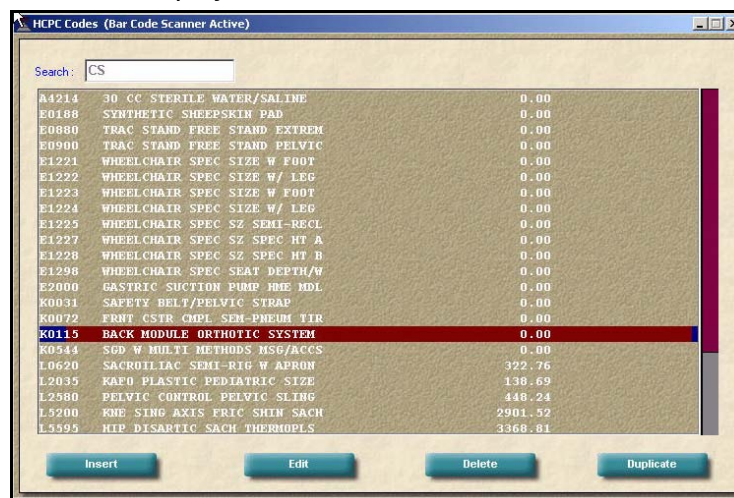

If you have a sales representative working with or for your company to sell items for you (e.g., medical equipment, prosthetic supplies, etc.) or a specialist that is paid commission for particular services, you may want to streamline your commission calculations. You can do this by adding fee information to the HCPC codes that you use when an item is sold or a service provided on behalf of your company.

In addition, if you are using the Inventory feature of the Futura software (see page 8-1), it is advisable for you to associate prices with appropriate HCPC codes (e.g., any HCPC codes that represent products that you will disburse to and charge patients). This process makes invoicing and claims much more automatic (see page 8-33).

1. Go to Setup►Codes to display the Codes submenu.

2. Select HCPC to display the HCPC code list.

3. Click Edit to display the HCPC code record to which you want to add commission fee information.

4. Click Options in the lower right side of the screen to display the options submenu.
5. Select HCPC Codes to display a blank (new) HCPC Commission Schedule record.

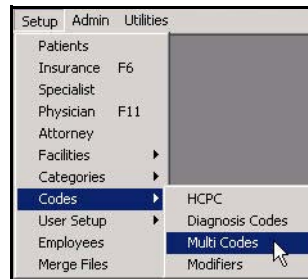

6. Enter/select the appropriate information for this code commission.
 - Please see “HCPC Commission Schedule Record” on page A-24 for more information about the fields on this record.
7. Click Save to store the HCPC code with the new commission fee information.
 - Repeat steps 3 through 6 for each code to which you want to add a commission fee.

Set Up MultiCodes for Repeat Services

It is very likely that in your business you do a lot of the same services over and over again (e.g., build the same prosthesis or orthosis over and over again). The Futura MultiCodes tool allows you to set up these repetitive services one time so that the same set of codes can be used over and over again for different patients. In addition, you can set up very specific MultiCodes (e.g., one set of multICODES for each different leg prosthesis that you build) or more general ones that allow you to then include or delete specific components each time (e.g., create a MultiCode set for BK only, then include only certain components depending upon whether or not this a right or left leg, etc.) - see page 4-30 for more information on the Pick List option. You can increase or decrease the level of detail for each set of MultiCodes as needed.

Set Up MultiCodes

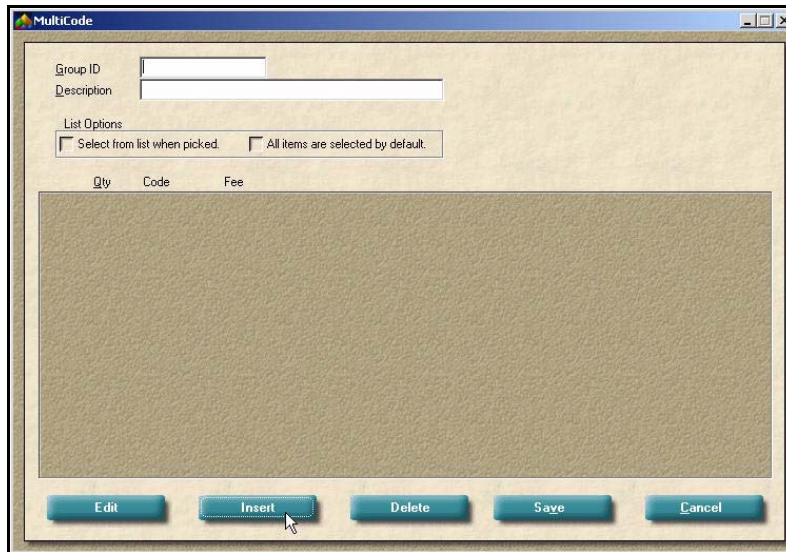

From the Setup menu:

1. Go to Codes►Multicodes to display the MultiCodes list
 - Until you create one or more MultiCodes, "<None>" will be the only item in the list as shown below.

2. Click Insert to display a new (blank) MultiCode window.

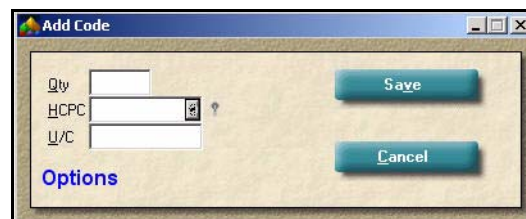

3. Enter a Group ID (i.e., a concise but obvious name for this set of codes such as BK).
4. Enter a description for this set of Multicodes (i.e., the description should further identify this group MultiCodes, such as BK w/ Lock Pin).
5. Select the List option that you want to use (i.e., do you want to have the choice to pick and choose which of the codes in the group should be included or excluded, or do you want all of the codes to be included each time you use this group of MultiCodes).

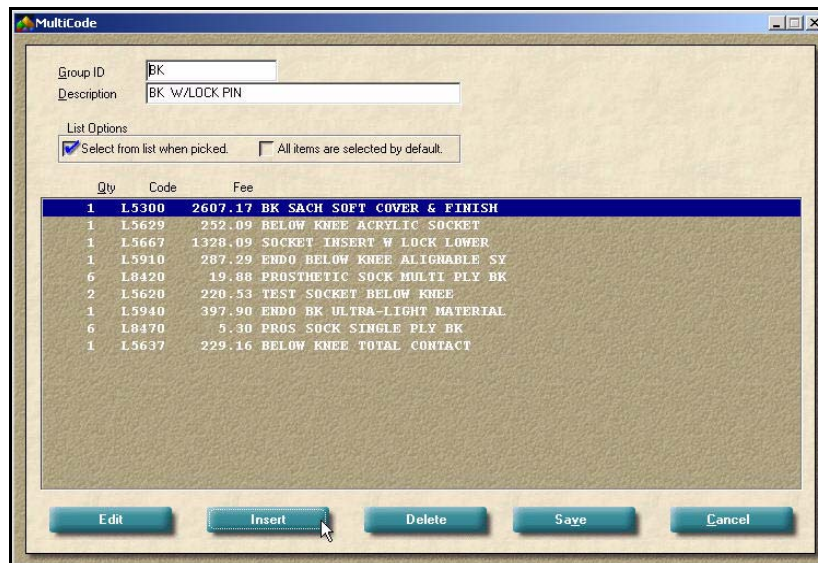

Example:

Mr. Simmons is coming in for BK services for his right leg. However, even though you have a prosthetic sock included in this group, you will not be using it for Mr. Simmons. You can use the pick list to delete it from the list for this one specific transaction without permanently removing it from the group. In addition, if you decide you want to use something other than the specified sock, you can always add a code to the transaction in addition to the MultiCode group.

6. Click Insert to display the Add Code window.

7. Enter the quantity of items reflected in the HCPC code you will be associating (e.g., how many socks should be included).
8. Click  to display the HCPC code list.
9. Select the appropriate HCPC code for this item.
10. Click Select to insert it in the HCPC field of the Add Code window.
11. Enter the usual and customary charge for this particular code.
 - If you have already set up a UC fee schedule for the selected HCPC code, this will autofill in the UC list.
12. Click Save to store this code in the MultiCode group you are creating and return to the MultiCode window for the current group.

Qty	Code	Fee	
1	L5300	2607.17	BK SACH SOFT COVER & FINISH
1	L5629	252.09	BELOW KNEE ACRYLIC SOCKET
1	L5667	1328.09	SOCKET INSERT W LOCK LOWER
1	L5910	287.29	ENDO BELOW KNEE ALIGNABLE SY
6	L8420	19.88	PROSTHETIC SOCK MULTI PLY BK
2	L5620	220.53	TEST SOCKET BELOW KNEE
1	L5940	397.90	ENDO BK ULTRA-LIGHT MATERIAL
6	L8470	5.30	PROS SOCK SINGLE PLY BK
1	L5637	229.16	BELOW KNEE TOTAL CONTACT

- Repeat steps 6 through 12 for each code you want to add to this group.
13. Click Save on the group MultiCode window to store this group of MultiCodes and return to the Multicodes List.

- Repeat steps 2 through 13 for each group of MultiCodes you want to create.

SECTION 5

DAILY TASKS

What You'll Find In this Section:

- Page 5-1 ■ Using the Appointment Viewer
- Page 5-24 ■ Synchronizing Your PDA
- Page 5-32 ■ Creating and Maintaining Patient Accounts

- Page 5-125 ■ Creating and Using Templates (and Quotes)
- Page 5-131 ■ Printing a CMN
- Page 5-134 ■ Document Collection and Follow-up Activity

NOTES:

Using the Appointment Viewer

Futura software applications provide you with a powerfully efficient appointment setting and viewing tool. The Futura Appointment Viewer is nearly completely customizable and allows you to interface with other areas of the application to make information gathering and entering as efficient as possible.

In the Appointment Viewer you can:

- **View a Specialist's appointments (at a glance) for an entire month at a time**
- **Make, confirm, reschedule, cancel and color code appointments**
- **Enter patient information (as a one time or permanent patient)**
- **Add notes to an appointment (e.g., the patient has special needs to address)**
- **Print out appointments by Specialist**
- **Synchronize your PDA**

Example:

Mr. Smith is a one time only patient. Instead of creating a permanent record for him, you can create a one time only item, associate transaction, insurance, and other patient information to this one appointment. Futura software will keep track of this information as long as you need it to. In addition, you may want to add a note that will be printed out with the day's appointment (e.g., this patient is being seen for a second opinion only).

If Mr. Smith decide he wants to become a regular visiting patient at your facility, you can then take the already recorded information and make Mr. Smith a permanent patient.

HINT:

It's a good idea to create a patient record while scheduling the patient's first appointment. This is an easy way to create the patient record, link it to the appointment, and maintain the visit as part of the patient's history. In this way, you also can skip the step of creating the patient separately. Because every element you enter into the Futura software is in some way associated with most other elements, this allows you to create a patient and an appointment all in one place, rather than as separate procedures. See page "Creating and Maintaining Patient Accounts" on page 5-32 for more information about patient records.

Add a Specialist to the Appointment Viewer

Before you can set an appointment for a particular specialist, you must add him/her to the Appointment Viewer.

1. Select Setup►Specialist to open the Specialists list.
 - If no specialist have been added to the system, you can do so now, (see page 4-9).
2. Select the specialist that you want to add to the Appointment Viewer.

3. Click Edit to open the record for that specialist.

SHORTCUT

You can use the Shift key to open the selected record.

4. Click on the check box next to the “May have appointments” option.

When you activate the “May Have Appointments” option, this Appt button will appear (see step 5 on next page).

5. Click on Appt to open the Appointment Setup window.

Generally refers to the time appointment hours stop and lunch begins.

Generally refers to the time appointment hours are done.

Generally refers to the time when appointment hours begin and lunch is over.

Generally refers to the start of the day.

	Start	Lunch	Stop	Stop	Increment
Monday					
Tuesday					
Wednesday					
Thursday					
Friday					
Saturday					
Sunday					

All times are entered in military format

Save Cancel

Options

6. Enter the times of the availability of the current specialist (e.g., 800 to 1500 would be 8am to 3pm).
- Once you set up specific times and days, any time you attempt to schedule an appointment for a time or day on which the specialist is not available, a message will appear to remind you that if you want to set up such a time for an appointment, you will have to override the time and day set up for that one instance.
 - If you do not set up specific times, you can skip to step 8. However, if you do not set up specific times, the current specialist will show as available in the Appointment Viewer as being available all day, every day.
7. Enter the increments of time (in minutes) to define how many appointments allowed per time slot (e.g., 3 increments available at 9:00am, which means that 3 appointments may be scheduled for 9:00am, etc.).
8. Click Save to store the set times and days and close the Appointment Setup window.
9. Click Save to store the new settings with the specialist's other information.
- You can now use the Appointment Viewer to manage appointments for the designated specialist. This specialist's name will appear in the list of specialist on the Appointment Viewer, and will appear as available only during the specified times.
 - If you attempt to schedule an appointment for a specialist that is unavailable at the time you are requesting, you will get a message to let you know that the specialist is busy. However, you can proceed and schedule the appointment if appropriate.

Appointment Viewer Basics

There are several parts to the Appointment Viewer (AV) so it's a good idea to review the information below to familiarize yourself with the functions to make the best use of your time and effort.

Go to Receivables►Appointments to open the main page of the Appointment Viewer.

SHORTCUTS

There are 2 shortcuts you can use to open the Appointment Viewer:

Ctrl + A

OR

Click **Appointments** in the Quik Click menu.

Calendar
Display previous month and/or year.

Return to today's date.

At a Glance
Shows an entire month of appointments for the selected specialist.

Return to today's date.

Selected specialists
names appear here.

Appointment Details
appear here.

Close the Appointment Viewer

Specialist List
All of the names of the specialist who have been set up for receiving appointments will appear here.
However, only those that have been selected using the radio buttons (o = not selected / ● = selected) will appear on the main portion of the Appointment Viewer.
Specialists can be assigned to specific groups for organizational purposes. These groups can be customized by the system administrator.

The Calendar

The functionality of this calendar is nearly identical to the calendar associated with date fields (see page 3-15). But instead of filling in a text field, you will be displaying an appointment page for a specific day with specific time increments (which can be customized).

The Specialist List

This is a list of all specialists who have been set up to accept appointments (see page 5-2). In addition to just listing the specialist, you can specify and list them in groups. Once you have included and organized them as needed, you can select and deselect them to appear in the Appointment Viewer's main scheduling page, where the appointment times and details are displayed.

Example:

On Wednesday, you may need to make an appointment for a patient for Thursday. Let's say out of 4 doctors in the office, only Dr. Campbell will be accepting patients on Thursday. To make it easy to see what times she will have available, you can select her name only, deselect the other doctor's names. This clears the appointment section of all but Dr. Campbell's scheduled appointments. Appointments for the other doctors in the office can be re-displayed by selecting their names.

This list can be customized for each employee using the system (i.e., if Susan sets up 4 specialists, and removes 2 from the available listing, her setting will stay the next time she logs in. However, this change will only apply to what she sees using her settings. No other user will be affected.

Appointment Details

This is the location in which you enter any information you need to about a patient or their appointment. Appointment details are displayed by time and date. And only for those specialist selected in the Specialist List.

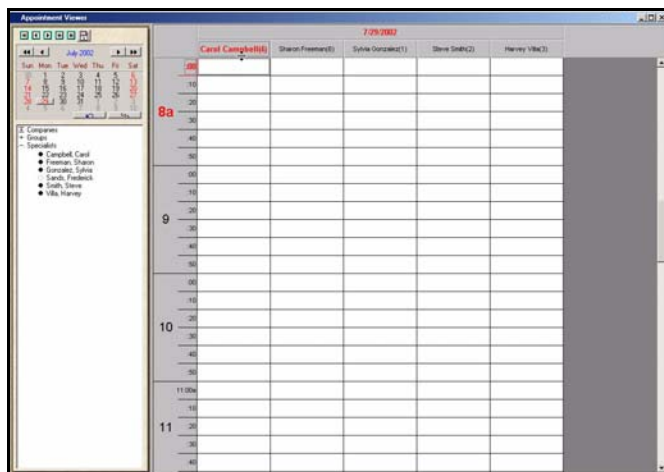

At a Glance

This feature gives you the ability to view a specific specialist appointments by month.

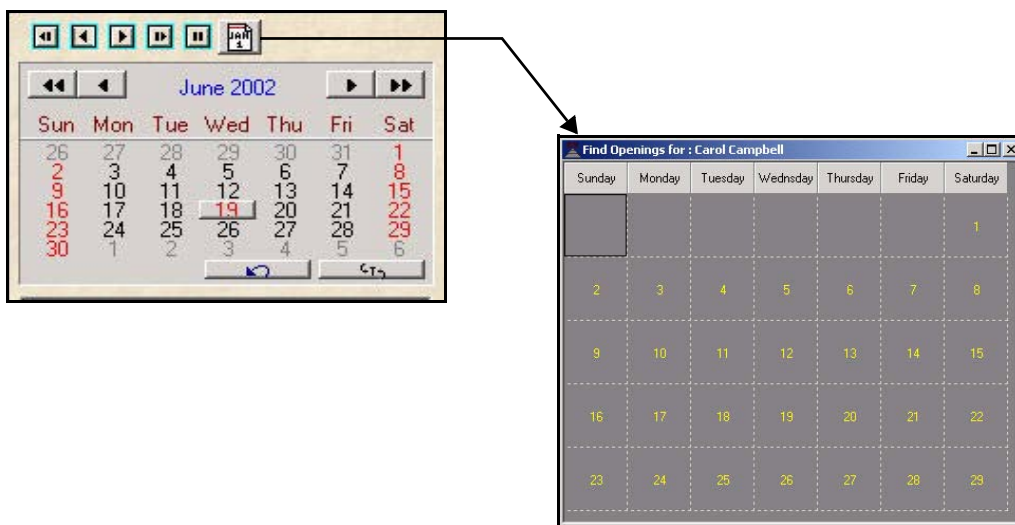

Example:

Mrs. Vogel calls in for an appointment next month with Dr. Gonzales. Instead of having to scroll day by day through Dr. Gonzales' appointments for next month, you can click this button and have the entire month displayed with only appointments for Dr. Gonzales.

1. Select Receivables►Appointments to open the main page of the Appointment Viewer.
2. Click on the appointment column of the specialist for whom you want to view a month of appointments.

3. Click  to display the month of appointments.

Resizing, Moving, Closing and Minimizing the Appointment Viewer

You can resize, move, and minimize the Appointment Viewer window the same way you can all other windows (see page 3-5).

Adjusting Column Sizes

You can increase or decrease the size of the appointment columns as needed to allow you to see more or fewer appointment information as needed.

IMPORTANT!

This setting does not save once you close the Appointment Viewer. It is only meant as a temporary method of allowing you to see information that may not appear in the smaller cell width.

1. Move the cursor over the dividing line between specialist name headers above the columns.
 - *Once you get the cursor directly on that line, the arrow cursor will change (see illustration below).*

- Click the cursor on the line and drag the column border either way until it is the size you want it.

3. Release the mouse button to leave the column at its new size.

HINT

You will notice a number in parenthesis next to each specialist's name. This designates the order in which the specialist's information was entered into the system.

Scheduling Appointments

1. Go to Receivables►Appointments to open the Appointment Viewer.
2. Select the Specialist(s) for whom you will be scheduling appointments.
 - A column will appear for each selected specialist, with each specialist's name at the top of the column.

NOTE

Remember, only those that have been selected using the radio buttons (o = not selected / ● = selected) will appear on the main portion of the Appointment Viewer.

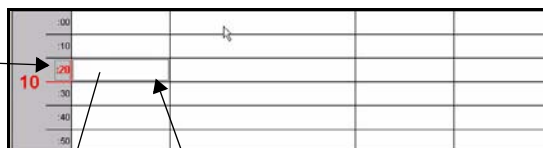

3. Double click on the cell that corresponds to the time and specialist for whom you want to schedule the appointment.

HINT:

You can also right click on an appointment to display a list of options. From there you can choose what task you need to perform for the specified appointment (e.g., reschedule appointment).

Double click on a cell to open an appointment record.

Right click on a cell to display a list of options.

- A new Appointment record will be displayed. Please see "Appointment Record" on page A-2 for more information about the fields on this record.
- If this is a one time appointment for this patient, or you don't want to create a permanent information record for this patient, you can enter all of the information into the fields as appropriate, then skip to step 7 below.

- Click the arrow next to the Name field to display a list of existing patient information records.

Select Patients (Bar Code Scanner Active)

Search:

<Search Completed>

Insert Edit Delete Duplicate

- Select a patient name to automatically fill in all of the other patient information fields (name, phone number, social security number, etc.).
- Click the arrow next to the About field to display a list of HCPC codes to describe the reason this patient is being seen.
 - You can also enter this information if you don't want to select from the list

HINT

If you entered Appointment Codes (see page 4-24), this is where you would enter/use them. Just type in the first few letters of the abbreviation you used (APPT as recommended), and the beginning of the appointment codes in your list will appear. Then, scroll as needed and select a code from that list.

If you created appointment codes with default times and/or color code information, this will appear in the Appointment Viewer when the corresponding codes are selected.

- Select any of the appointment options that apply.

Options

☐ Rescheduled

☐ No Show

☐ Don't Print

☐ Confirmed

☐ Cancelled

- Enter or select the length of time (in minutes) the appointment will last.
 - If you are scheduling an all day appointment or need to block out an entire day for a particular specialist, you can click on the check box next to the "All day" option.

9. Enter the phone numbers as needed.
10. Enter the social security number if it was not automatically filled in.

11. Select a color for this appointment as needed.
 - The color coding option can be used however your facility wants to use it.

Example:

You may want to use red for any emergency appointments scheduled for that day, or use blue to indicate all appointments there for consultation only, etc. How your facility uses the color coding option is completely flexible.

12. Click Save to add the appointment to the Appointment Viewer.

Making Changes to an Appointment

Once you schedule an appointment with a specialist, you can make changes to it. In addition to the original appointment, Futura software will track any and all changes you make to it for a complete and accurate record of the patient's appointment history. You can:

- **Confirm an Appointment**
- **Reschedule an Appointment**
- **Edit the Appointment Information**
- **Change Status to Cancelled or No Show**
- **Include Another Specialist**

Confirming an Appointment

It is very likely that your facility has a policy of confirming appointments with patients. In order to track these confirmations, you can use the simple procedure below.

1. Double click on the appointment listed in the specialist's appointment column to open the corresponding appointment record.
 - Please see "Appointment Record" on page A-2 for more information about the fields on this record.
2. Select "Confirm" from the appointment Options.

HINT

Here's one example of where you might want to use the color coding feature. You can change the color of any confirmed appointment to quickly differentiate them from unconfirmed appointments.

3. Click Save to store the confirmation.

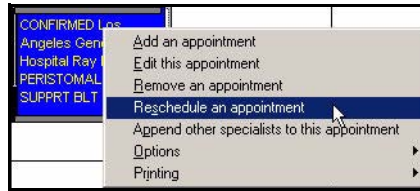

7/30/2002

	:00		

- If you have the Reschedule option activated in your user setup, then a confirmation will appear in the cell in which the appointment appears in the specialist's appointment column.
- All schedule changes will be tracked by the Futura software within the patient's information. See "View a Patient's Appointment History and Future" on page 5-39 for more information about tracking patient appointment histories.

Reschedule an Appointment

There are 2 ways to change the date of an appointment:

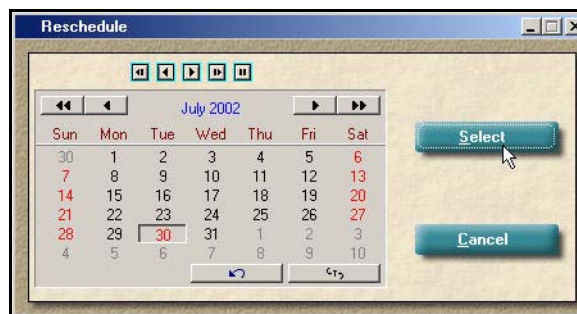

1. Right click on the appointment to display the appointment menu

OR

Double click on the appointment to display the appointment record.

2. Click "Reschedule" to open the Reschedule calendar.

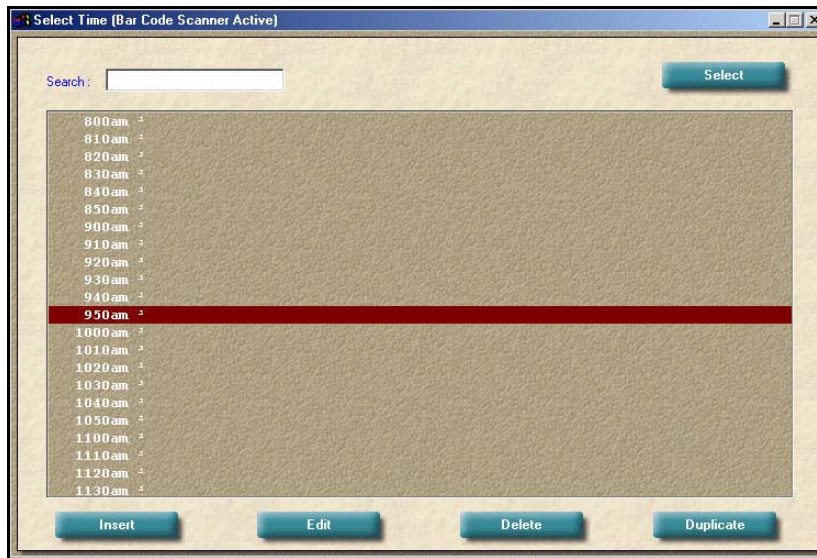

3. Select the new date.

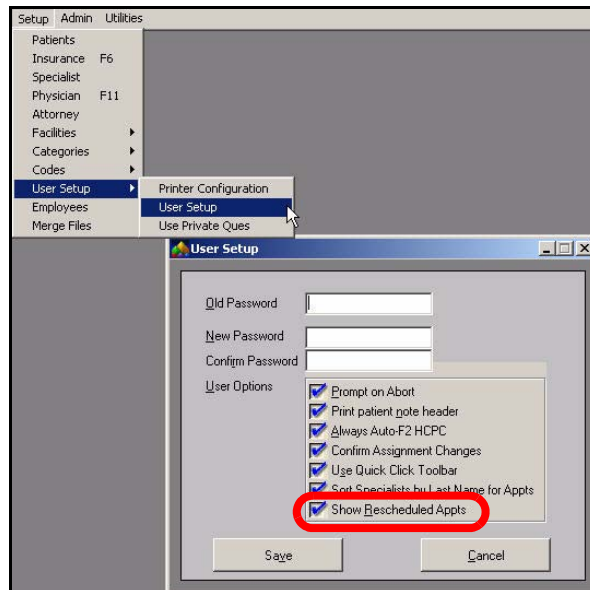

NOTE:

For information about using the calendar, see page 3-15.

4. Click “Select” to display the time list.
5. Select a new time as needed.

6. Click “Select” to change the appointment to return to the Appointment record.
7. Click Save to save the new time and/or date in the Appointment Viewer.
 - If you have the Reschedule option activated in your user setup, then a confirmation will appear in the cell in which the appointment appears in the specialist's appointment column.
 - You can use your User set up to choose the option to show or hide rescheduled appointments. This is set to show as the default, but you can change it at any time. Go to Setup►User Setup►User Setup, select “Show Rescheduled Appointments” (if it is selected, this will deselect it and vice versa), then click Save to store the setting.

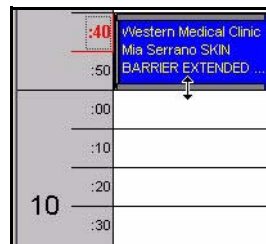

Quickly Change the Length of an Appointment

In addition to changing the time of an appointment, you can shorten or lengthen the amount of time scheduled for a specific appointment without having to access the Appointment record directly.

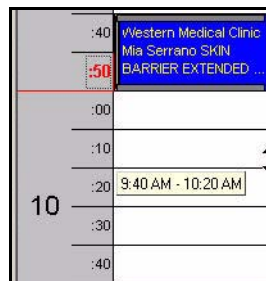

1. Click on the cell in which the appointment appears.

:00	CONFIRMED Fernando Curochio MALE				
:10	EXTERNAL CATHETER		CONFIRMED Los Angeles General Hospital Ray Lotton		
:20			PERISTOMAL HERNIA		
:30			SUPPRT BLT		
:40	Western Medical Clinic				
:50	Mia Serrano SKIN				
	BARRIER EXTENDED ...				
:00					
:10					
:20					
:30					
:40					
:50					

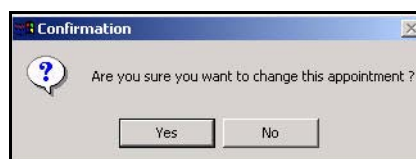

2. Move the arrow cursor slowly over the bottom bar of the appointment cell until it changes.

3. Click and hold that cursor to move the bottom bar up (to shorten the appointment time) or down (to lengthen the appointment time).

4. Release the mouse button to display a confirmation message asking you if you are sure you want to make this change.

**NOTE:**

You can view the appointment history for a specific patient by following the procedure shown on page 5-39. This will provide you with any appointment the specific patient has ever had (this can include confirmed, no show, cancelled and rescheduled appointments if that setting is selected).

Printing a List of Appointments

You can print several variations of the Appointment Viewer. You can print:

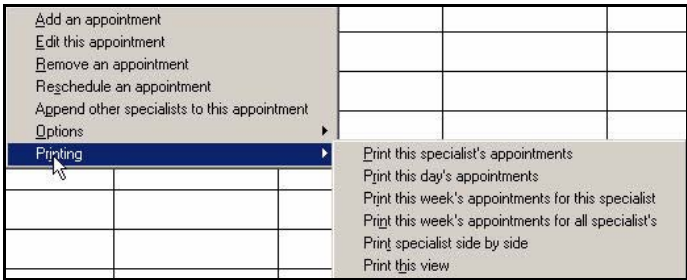

- A particular specialist’s appointments
- A specific day’s appointments
- The week’s appointments by designated specialist
- The week’s appointments for all specialists
- A side by side view of specialists’ appointments
- The exact view you see on the screen

NOTE:

- Any notes (see page 3-27) associated with appointments will be printed out when the appointment list is printed.
- If the appropriate settings have been made in the User Setup options, you can set the appointments to sort and print alphabetically by specialist. Otherwise, they will print out in the order entered (chronologically). This setting can also be made within the User Rights option, but by using the User Setup options, you can change the setting for each user (e.g., John may want the list to print alphabetically by specialist, but Pat may want them listed in chronological order)

1. Right click on a cell in the Appointment Viewer to display the appointment menu.

NOTE:

The cell you click on will provide a different list of results when printed. The cell you use to define your appointments will print a variety of different lists according to the corresponding specialist.

Example:

If you right click on this cell, you will be able to print various lists related to the appointments set for specialist Sharon Freeman.

7/30/2002					
	Carol Campbell(4)	Sharon Freeman...	Sylvia Gonzalez(1)	Steve Smith(2)	Harvey Villa(3)

		Sharon Freeman			Western Medical Clinic

**NOTE:**

You can make changes at this point direction into the NotePad version. However, once you make changes in this format, you will need to use the File►Print option from within the NotePad function.

4. Click (in the upper right had corner of the screen) to close the NotePad window.
 - A confirmation message will appear to confirm that you want to print the list.

5. Click Yes to print the list on the designated printer.

Using the Call Log

The Call Log can be one of the most useful tools you will have in your office. Not only does it allow you and others in the office to log and track calls, it also allows you to maintain a call history, and even attach the history to the corresponding record (e.g., patient, physician, specialist, etc.).

Logging Pending Calls

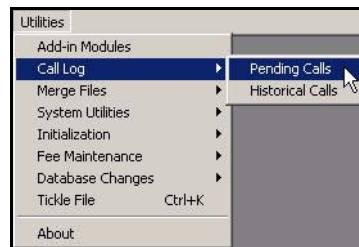

When you log a pending call (a call that has just come in and has not been handled by the recipient), it will automatically be time and date stamped. In addition, the person logging the call will automatically be noted.

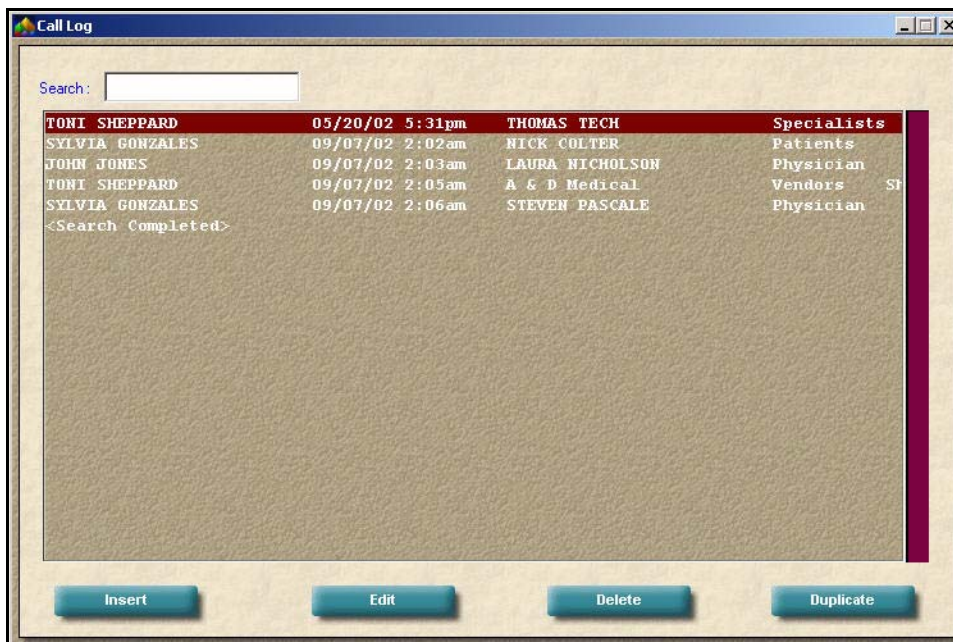

NOTE:

Once the call is logged as pending, it can be reviewed at any time, then purged to history when the call has been completed.

1. Go to Utilities►Call Log to display the Call Log submenu.

2. Click on Pending Calls to display the pending Call Log list.

- Click Add/Insert to open a blank (new) call log record.

- Select the name of the employee for whom the call is received.

**HINT:**

To enter the name of caller from a master list, click on the down arrow to display a master list of selection files. This is a list of all categories of records stored in the system (e.g., physicians, patients, vendors, etc.). Click on the applicable the category of records (e.g., patients), then click Select to display the corresponding list of records (e.g., patient list). Click on the appropriate patient name, then click Select to enter the patient name in the Caller field, the word Patient in the Type of Caller field, and any other corresponding patient information in the phone number fields.

- Enter/select the information as appropriate.
 - Please see "Call Log (Pending Call) Record" on page A-10 for more information about the fields on this record.
- Click Save to save the call and place it in the pending Call Log list.

Reviewing, Completing, and Archiving Calls

Once an employee has received his/her call, done whatever (if anything) needs to be done, the call can then be moved (purged) to history. Once placed in the Call Log History list, any call can be reviewed and edited at anytime thereafter. In addition, even if a call is purposely deleted from the history list, the call information will remain attached to the corresponding record.

NOTE:

Any call purged to the history list will also be time and date stamped with the date of the purge as well as the name of the person who has moved the call into the history list.

Example:

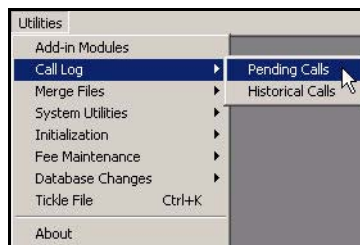

If a patient, Mr. Saltz, calls a specialist asking a question about his orthotic device, the specialist can return the call, make note of the discussion, and mark the call is “done”. This puts the call information into the call log history list. In addition, this information is permanently attached to Mr. Saltz’ patient record.)

NOTE:

Once the call is logged as pending, it can be reviewed at any time, then purged to history when the call has been completed.

1. Go to Utilities►Call Log to display the Call Log submenu.

2. Click on Pending Calls to display the pending Call Log list.

3. Search for your calls (e.g., enter to toni in the search field to display all calls for Toni Sheppard).

4. Click on the call you want to view and complete.

Buttons: Save, Apply, Cancel, Done with Call

- Please see "Call Log (Pending Call) Record" on page A-10 for more information about the fields on this record.

6. Click Done with Call to move the call to the Call Log History.
 - A prompt will appear to ask you to confirm that you want to move the call to the history list.

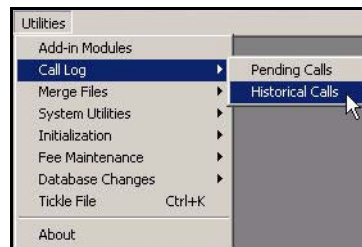

IMPORTANT!

If you want to save the information without moving the call to the Call Log History, you can click Save. The call will then remain in the pending call list for review at anytime. However, it is recommended that you purge all calls to history at some point in order to use the call log more efficiently.

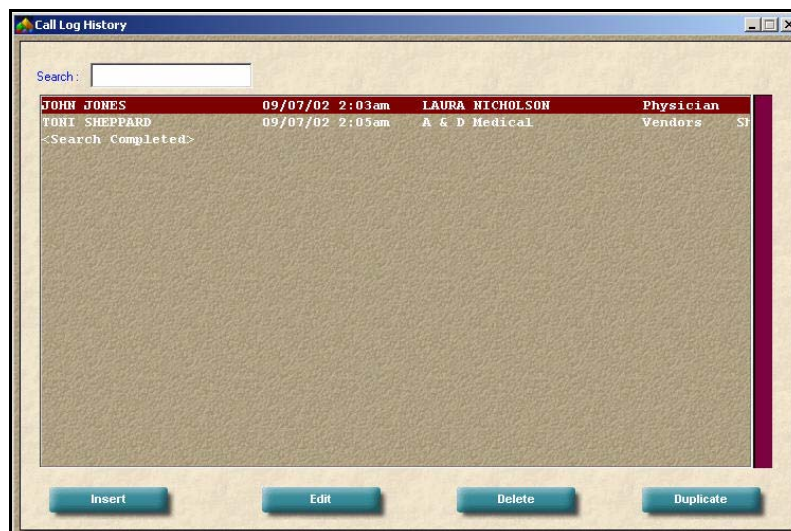

7. Click Yes to confirm that you want to place the call into the history list.
 - If you click No, the call will remain in the pending call list.
 - The call will be time stamped with the time and date of the purge as well as the name of the person that has moved the call to the history list.

Review the Call Log History

1. Go to Utilities►Call Log to display the Call Log submenu.

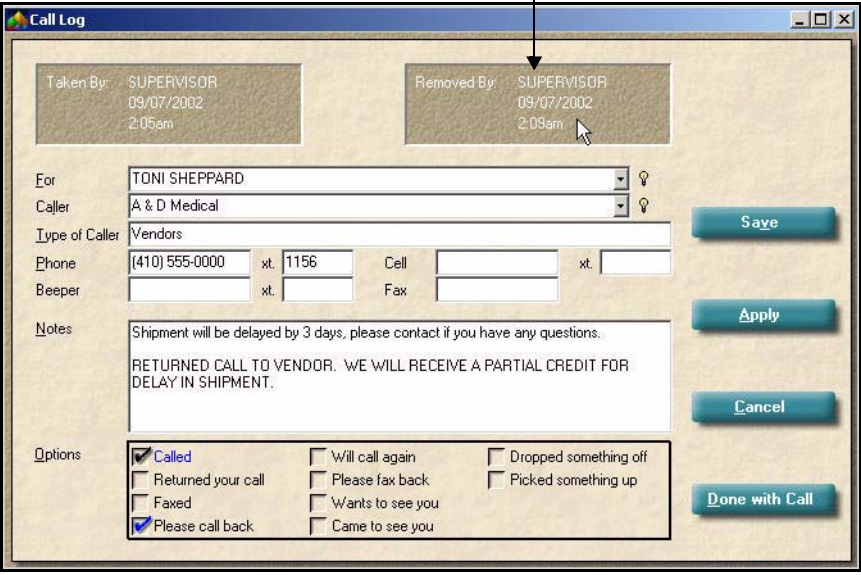

2. Click on Historical Calls to display the Call Log History list.

3. Click on the call you want to review.

- Click Edit to open the call record for that call.

Time, date, and name stamped here.

Synchronizing Your PDA

You can purchase use this Futura PDA synchronization utility to copy your appointments from the Appointment Viewer (see page 5-1) onto your PDA (personal digital assistant). Included in the appointment information is the specialists' and patients' names, appointment location, time, and reason. In addition, you can transfer appointment information for one, several, or all specialists onto one or more PDAs.

NOTE:

This utility is not included with the basic Futura application. You will need to purchase it as a separate module. Please contact your Futura representative or Technical Support for more information.

1. Log out of the Futura application (see page 4-2).

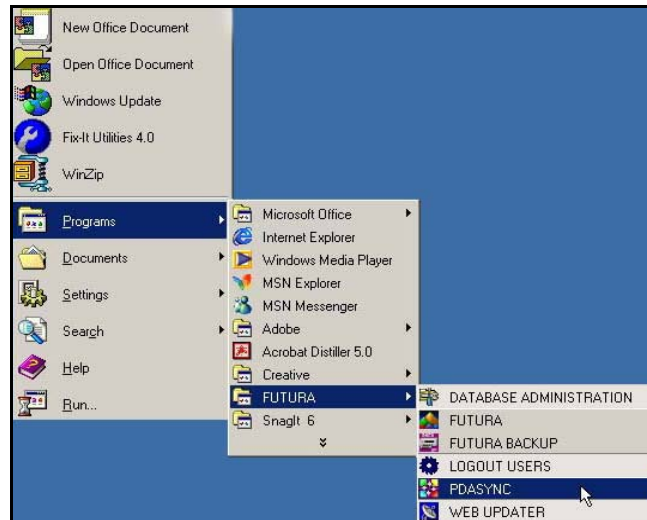

IMPORTANT!

The restoration cannot be performed when anyone is logged into the system. Therefore, you must make sure you and anyone else in your company is properly logged out of the Futura application.

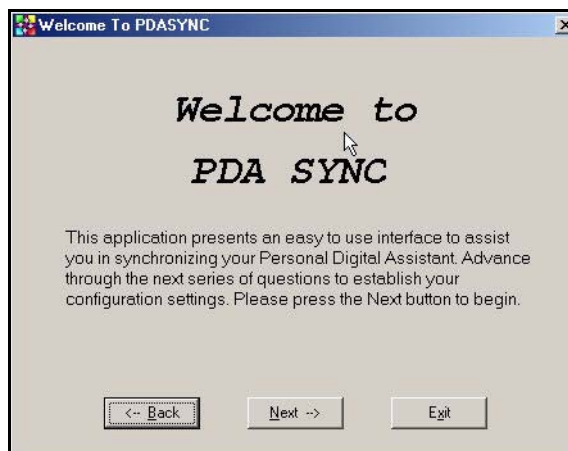

2. Click the  button at the bottom left corner of your computer screen to display the Start menu.

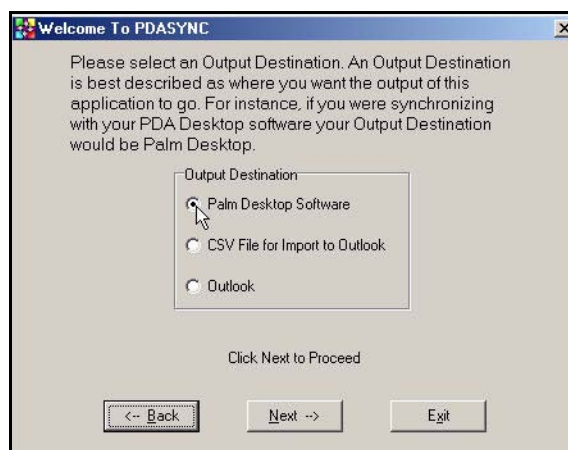

3. Go to Programs►Futura to display a list of utilities for the Futura application.

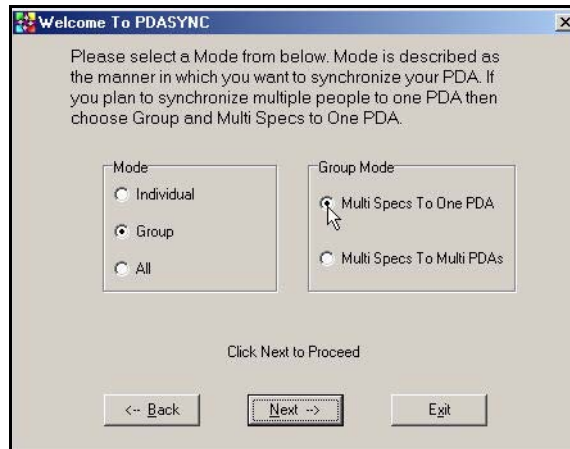

4. Select PDASync to display the PDA SYNC Welcome window.

5. Click Next to display the Choose Destination window.

6. Select Palm Desktop Software to display the Mode window.

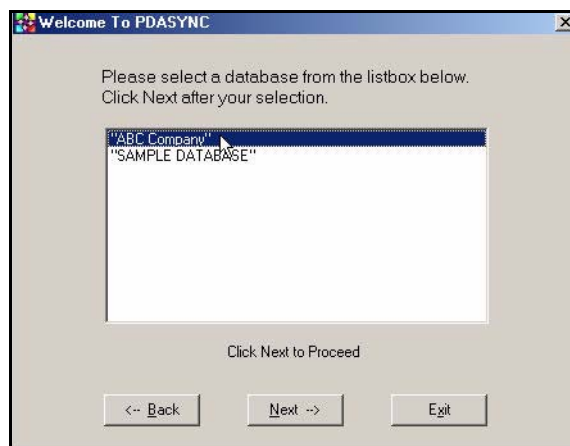

7. Select whether you want to transfer information for a specific specialist, a specific group of specialists, or all specialists.

NOTE:

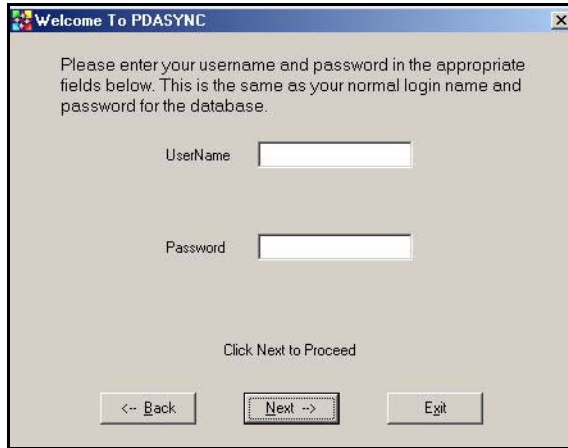

If you select Group or All, you will need to specify whether you want to transfer the specified appointment information onto one or more PDAs.

8. Click Next to display the Choose Database window.

9. Select the database containing the appointment information that you want to transfer.

10. Click Next to display the Login window.

Welcome To PDASYNC

Please enter your username and password in the appropriate fields below. This is the same as your normal login name and password for the database.

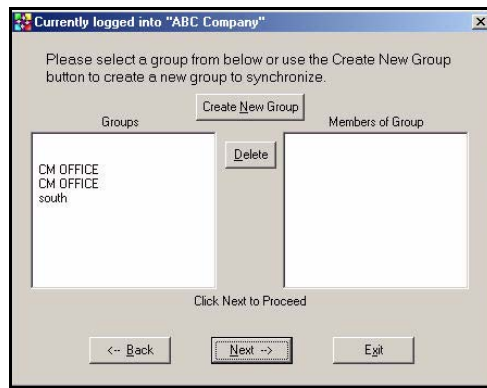

UserName

Password

Click Next to Proceed

<-- Back Next --> Exit

11. Log in as usual (using your regular user name and password as shown on page (p. 4-1)) to display the Choose a Group window or Choose a Specialist window (depending upon the choice you made in step 7 above).

Currently logged into "ABC Company"

Please select a group from below or use the Create New Group button to create a new group to synchronize.

Groups Create New Group Members of Group

Click Next to Proceed

<-- Back Next --> Exit

OR

Currently logged into "ABC Company"

Please use the combobox below to choose the specialist for which the synchronization process will be applied to.

Specialist

SYLVIA GONZALEZ
STEVE SMITH
HARVEY VILLA
CAROL CAMPBELL
FREDERICK SANDS
SHARON FREEMAN

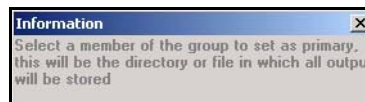

Click Next to Proceed

<-- Back Next --> Exit

12. Select the group for which you want to transfer appointment information onto the PDA(s).

OR

Select the Specialist for whom you want to transfer appointment information onto a PDA.

Information

Select a member of the group to set as primary, this will be the directory or file in which all output will be stored

NOTE:

- If you have not created a group yet, see "Creating a New Group" on page 5-31.
- Once the information requested in the above message box is specified, the message will not appear again.

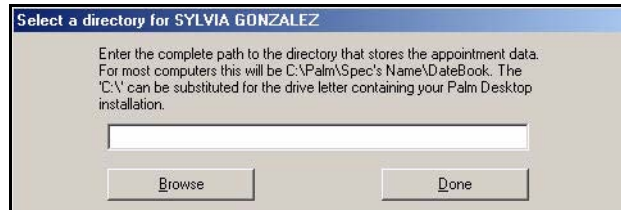

- Click Next to display the Choose Destination window that asks you to specify the location (folder) where the appointment information is stored.

NOTE:.

Once the information requested in the above message box is specified, the message will not appear again.

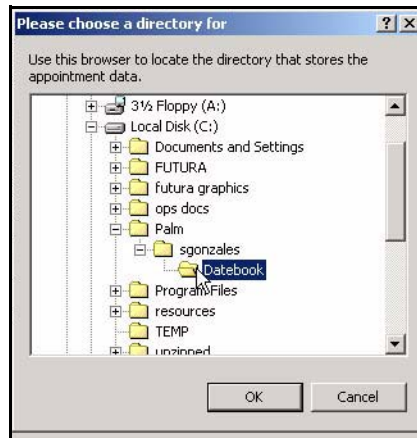

- Click  or press Esc to close this window and display the Select a Directory window.

NOTE:.

Once the information requested in the above dialog box is specified, the box will not appear again.

- Click Browse to open your computer's directory.
- Navigate to the location (folder) where the designated specialist's appointment information is stored (e.g., C:/palm/specialistname/datebook).

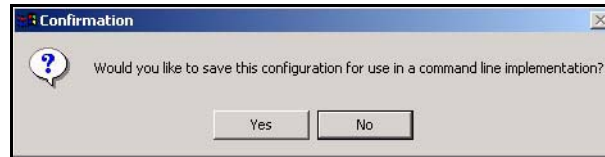

17. Click OK to select the chosen folder.

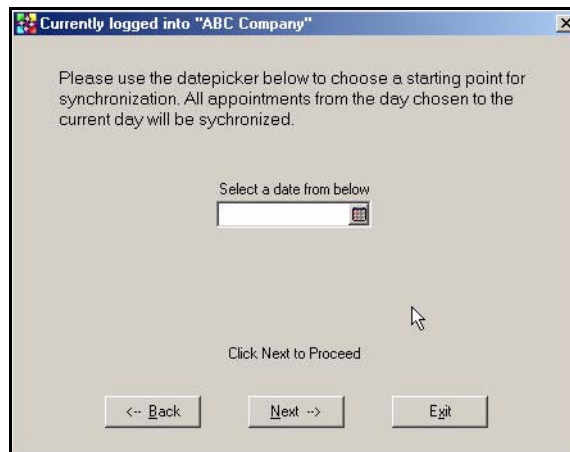

NOTE:

If you have chosen to download the information to more than one PDA, you will be asked to specify the path to where the appointments are stored for each specialist in this group. To do this, repeat steps 13 through 17.

- A message will appear to ask if you want to save this configuration (i.e., next time you won't have to specify the directory for this specialist).

- If you want to save the path you have just specified, click Yes to display the Date window. If this path was configured previously the Date window will automatically appear.

18. Click  to display the calendar.

19. Choose the date for which you want the synchronization to start (see “Calendar Option” on page 3-15).

NOTE:

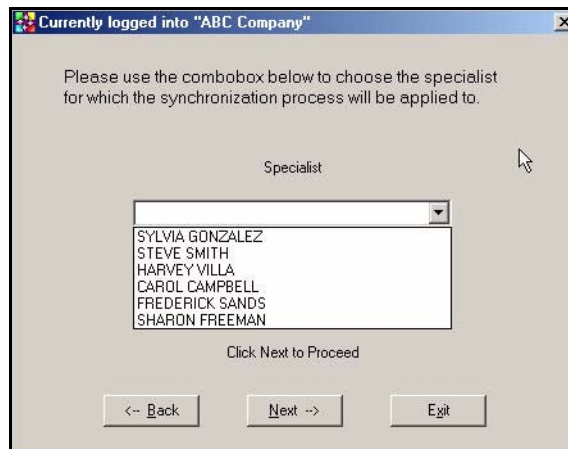

You need to select the date for which you want the synchronization to begin (e.g., this way you can include yesterday’s appointments, today’s appointments, and/or appointments from a particular date on).

20. Click Next to begin the transfer.
 - *A confirmation will appear for each specialist selected for the transfer of information.*
21. Click OK for each confirmation message that appears.
 - *A message will appear to let you know when the transfer of all designated appointment information is complete.*

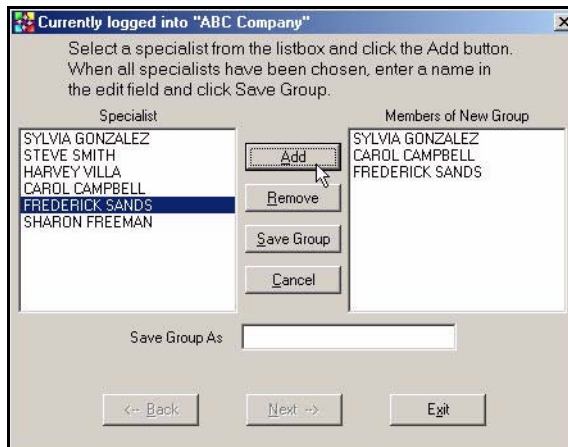

Creating a New Group

If you are transferring appointment information for a select group of specialists, and if you have not yet specified that group, follow the steps below.

1. Click Create New Group to display the Select a Specialist window.

2. Click Add to include them in the new group.

3. Continue adding until all the specialists you need are included.
4. Enter a name for the group (e.g., CM for Costa Mesa office).
5. Click Save Group to save the list of specialist under the new group name.
6. Continue with steps 12 through 21 to complete the synchronization.

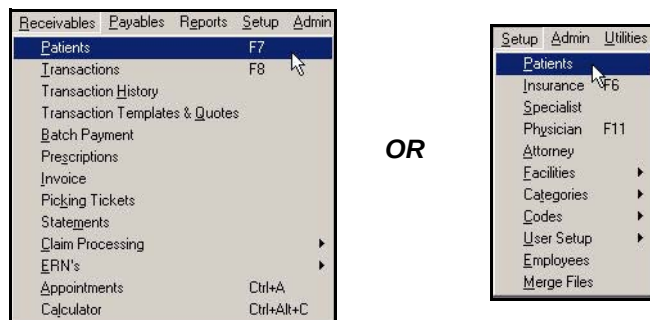

Creating and Maintaining Patient Accounts

One of the very first things you'll need to do is to enter patient account information. This information is the basis for nearly everything else you will do in the system. The record (or form) consists of 8 tabs that divide the patient information into logical sections as described below.

You can enter information from either the Setup or Receivables menu.

Add a New Patient to the System

From the Receivables or Setup menus:

SHORT CUT

F7 opens the Patient List.

1. Click on Patients to open the Patients list.

2. Click Add/Insert to open a new (blank) patient record.

3. Enter the information as appropriate for the following tabs:

- Please see “Patient Record” on page A-43 for more information about the fields on this record.

HINT:

Since the system remembers information exactly as you enter it (i.e., case sensitive), it is recommended that you enter information in all capital letters. However, if you choose not to, be sure that you remain consistent in the way your entries are made (i.e., all caps, all lower case, all initial caps, etc.).

Patient tab

Contains all the general statistics about (including, but not limited to) who the patient is, contact information, social security and tax information, as well as physician, specialist, and diagnosis.

Insurance 1 - 2 tab

Contains all primary and secondary insurance information needed for billing and other transactions.

- If by some chance the patient has a 4th insurance company, you can record it under the “Bill To” tab of the record.

Insurance 3 tab

Contains any information available on a 3rd (tertiary) insurance source if there is one.

- If by some chance the patient has a 4th insurance company, you can record it under the “Bill To” tab of the record.

Supplemental tab

Contains additional “statistical” information about the patient, such as height and weight, spouse information, employment/retirement dates, limited payment and invoicing information, etc. This is useful for claims and for DME patients.

Bill to tab

Contains all the basic information about the responsible party (i.e., who will be responsible - other than the insurance company - for paying the medical costs for this patient - such as a legal guardian, etc.). You can also use this tab to record a 4th insurance company if the patient has one.

Employer tab

Contains basic information about the patient's employer, if applicable.

Balance tab

Contains balances from all sources of insurance, as well as status of the account (i.e., 30, 60, and 90 days), and total balance.

Emergency tab

Contains basic information for the patient's contact "in case of an emergency".

4. Click Save to store all of the information you have entered.

Add an Image to the Patient Record

If and when you need to add an image (e.g., x-ray, photograph, etc.), you can easily do so using the Images button on the Patient record. You can also use this feature to open and edit existing images.

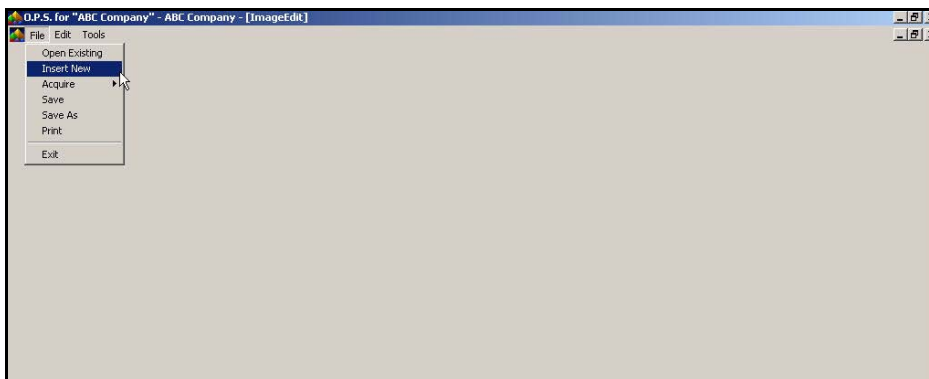

IMPORTANT!

Any image you want to add, must already exist on your hard drive or network.

From the Patient record:

The screenshot shows the 'Patient' form with tabs for 'Patient', 'Employer', 'Balance', and 'Emergency'. The 'Patient' tab is active, showing fields for Company, ID, Name, Address, City, State, Zip, Phone, Work, Birth Date, Signed Date, Release, % Disc, Ref Source, Ref Phy, Pres Phy, Specialty, Location, Note, Sex, Sigc. Sec., Acct. Type, Acct. Status, Tax Type, and Email. The 'Images' button at the bottom right is circled in red.

1. Click on Image to display the image window.

2. Go to File►Insert New to display the Browse window.

3. Navigate to the image you want to add to the record.
4. Click Open to display the image in the window.

HINT:

You can edit as needed using the Edit and/or Tools menus (copy, paste, delete, rotate, zoom in/out, etc.).

5. Go to File►Save to save the image in the patient record.

NOTE:

Any time you need to access the image, you can go to the patient record, and click on the Image button. Then, go to File►Open Existing to display the Browse window. Navigate to the image you want to view, and click Open to display the image in the Image window.

Edit Patient information

The process for editing patient information is nearly identical to that for adding a new patient to the system.

From the Patients list (see page 5-32):

1. Select the name of the patient for whom you want to change information.
2. Click Edit to open the Patient record for that patient.

3. Change information as needed (see page 5-32).
 - Please see "Patient Record" on page A-43 for more information about the fields on this record.
4. Click Save to store the changes.

Duplicate Patient Information

The Duplicate feature can make entering patient information efficient if you have two or more patients with similar information. It allows you to take existing information from one patient, and copy it to a new record when creating an account for a patient with comparable information.

NOTE:

Because the patient ID must be unique, when you duplicate a patient record, the new record will automatically be assigned a new ID.

Example:

You are affiliated with a new referring physician who has just sent 5 new patients to you. These patients all have the same referring and primary physician as well as the same specialist. And, perhaps, they all reside at the same retirement home or all have the same insurance coverage. Instead of having to retype the same information for each patient, you can use the Duplicate function to make a copy of the first record, then all you have to do is change the information that is different for each patient (e.g., name, age, emergency contact, etc.).

From the Patients list (see page 5-32):

1. Select the name of the patient you want to duplicate.
2. Click Duplicate to open the Patient record for that patient.

3. Change information as needed for this record (e.g., patient name, diagnosis, etc.).
 - Please see "Patient Record" on page A-43 for more information about the fields on this record.
4. Click Save to store the record with the new information (the original patient record will remain intact).

Delete a Patient from the System

Before deleting a patient from the system, be sure that you know that this is exactly what you want to do. Once a patient record is deleted from the system, that information cannot be recovered.

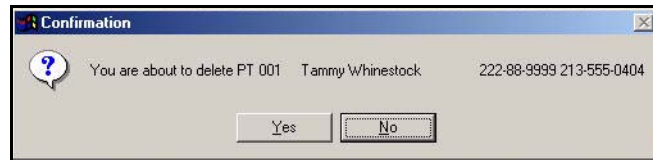

NOTE:

If a patient's record has an associated transaction, you will not be able to delete the patient from the system. However, if this is the case, you will be given the option to hide the patient information. Once hidden, the patient's information can be restored to the list at any time. see "Hiding Items" on page 3-23

From the Patients list (see page 5-32):

1. Select the name of the patient you want to delete.
2. Click Delete to display a message asking if you are sure you want to delete this patient.

3. Click Yes to delete the patient record.
 - If you click on No, the patient's information will remain unchanged.

View a Patient's Appointment History and Future

Futura software provides you with a simple way to view a list of appointments a patient has had or for which he/she is scheduled in the future.

Examples:

- An insurance company calls to verify the number of visits a patient has had in your office. You can quickly use this feature to give them a listing of any appointment (scheduled, kept, rescheduled, missed, etc.) that the patient has had with any specialist in your facility.
- A patient requires an additional fitting. You may want to find out if the patient is already scheduled for an appointment and/or if the appropriate amount of time has been allotted for the task required. You can easily find out if and when the patient is scheduled, and make any adjustments as needed from there.

From the Patient list (see page 5-32):

1. Select the name of the patient for whom you want to view an appointment listing.
2. Click Edit to display the patient's record.
3. Click "Options" in the lower left corner of the patient record to display a list of options.

SHORT CUT

F10 opens the patient Options menu.

4. Select "Appointment Listing" to view any appointments (past or future) that have been scheduled for this patient.

Any change in appointment status will appear here:

RS = Reschedule

NS = No show

CN = Cancelled

CF = confirmed

Date	Time	Status	Specialist	Notes	Location
04/08/02	1020am	SF w/	Priscilla Wagne		@Western Medical

10/01/02	840am	CC w/	Priscilla Wagne		

Buttons: Insert, Edit, Delete, Duplicate

Completing Special Forms

It is likely that from time to time, at least, there will be specific and/or special forms that you will need to complete for a patient. There are a certain number of forms that come already installed in the Futura software application for your convenience:

AK/BK

This form is also known as the “Lower Extremity Prosthetic Measurement” form. It provides you with a means to track basic patient information (e.g., age, height, weight), as well as previous prosthetic information, ambulation, specific measurements (e.g., contracture, stability, range of motion, socket dimensions), as well as model information.

Spinal

This form is also known as the “Universal Spinal Measurement” form. It allows you to enter and store basic patient information (e.g., age, height, weight, diagnosis, etc.) as well as spine curvature, brace type, breast and bra information, etc.

Prosthetic Form

This form is also known as the “Prosthetic Measurements” form. It allows you to note stump and regular leg measurements along with information about any prosthetic recommendations and fitting aids.

Knee Orthosis

This form provides you with a way to document any knee orthotic information for a specific patient. You can enter general patient information (e.g., age, height, weight, billing etc.), as well as orthotic knee components, modifications, measurements (in finished lengths), and fittings, etc.

AFO/KAFO Conventional

This form is also known as the “Conventional A.F.O./K.A.F.O” form. You can enter basic visit information (e.g., dates and places of service, etc.) as well as standard A.F.O./K.A.F.O. component information, and measurements (in finished lengths).

Initial Patient Assessment LE Prosthetic*

On this form, you can enter information regarding the etiology of the patient’s problem causing the requirement or recommendation of a prosthetic device, the level of patient functionality, brief or detailed assessment information, as well as a treatment plan.

Initial Patient Assessment LE Orthotic*

Using this form, you can enter information regarding the etiology of the patient’s problem causing the requirement or recommendation of an orthotic device, the level of patient functionality, brief or detailed assessment information, as well as a gait analysis, and clinical goals.

Progress Note LE Prosthetics*

This form for tracking progress for lower extremity prosthetics allows you to note a variety of items and issues (e.g., status, gait analysis, delivery status, general notes, etc.)

Progress Note LE Orthotics*

This form for tracking progress for lower extremity orthotics allows you to note a variety of items and issues (e.g., functional status, gait analysis, delivery status, observation notes, etc.).

*This form can be converted to MS Word format - see page 5-46 for more information.

OPGA Patient Outcome at 3 Months*

This form is also known as the "Orthotics and Prosthetics Group of America Patient Outcomes at Three Months" form. It provides you with a detailed "survey" measured in a Likert scale format (i.e., a 5 to 6 point measurement scale from one extreme to the other).

This form allows you to quickly evaluate a patient's status and progress in a consistent fashion on basic continuum (e.g., degree of assistance required for particular tasks, the patient's self evaluation on their physical and emotional status, changes in medication, etc.).

OPGA Patient History Information*

This is a survey type of form that contains very general patient statistics and level of functionality: age, height, weight, family income, education level, ethnicity, smoking habits, level of assistance required (if any), current or previous health conditions, depression issues, functional status, and mobility. This form can also be converted to an MS Word document.

Allied Orthopedics Upper Extremity Measurement

This form allows you to record general and detailed information as needed for any upper extremity prosthetic (e.g., patient information like age, height, skin color, ambulation level) including a measurement diagram. You can also list the required components.

Allied Orthopedics Orthotic Patient Intake

This form is an excellent form for evaluation of the current patient device, as well as tracking of that same device. Information held in this form includes, location of service, patient status (new vs. existing), general health and information (e.g., weight, height, activity level, etc.), and practitioner. It also allows you to record detailed device information (e.g., orthotic and/or prosthetic, liner style, suspension method. Additionally, you can include details about any service performed (e.g., cast, measurement, fitting, tightening, etc.), shoe information, and the ability to free type any specific details and comments.

SF12V2 Health Survey Forms 1

This form is also known as the "SF012v2 health Survey Scoring Demonstration" form and is recommended by Western University Hospital for patient outcome evaluations.

This form contains information regarding how the patient views his/her own health. Issues covered are general health, activity level, physical and/or emotional health effects on work and/or social activities, pain levels, general emotional well being, and level of mobility.

SF36V2 Health Survey Forms 2

This form is VERY similar to the Health Survey Form 1 (described above), and is also known as the "36v2 Health Survey Scoring Demonstration" form. It is recommended by Western University Hospital for patient outcome evaluations and covers the issues a bit more in depth than the SF012v2 form previously described.

This form contains information regarding how the patient views his/her own health. Issues covered are general health, activity level, physical and/or emotional health effects on work and/or social activities, pain levels, general emotional well being, and level of mobility.

*This form can be converted to MS Word format - see page 5-46 for more information.

Associate a Form with a Particular Patient

You may not want to have all forms associated with every patient. Therefore, Futura software allows you to pick and choose what forms you want to associate with each patient. You can select various forms from the list of 15 existing, pre-designed forms.

From the Patient list (see page 5-32):

1. Select the name of the patient for whom you want to complete a form.
2. Click Edit to display the patient's record.
3. Click "Options" in the lower left corner of the patient record to display a list of options.

SHORT CUT

F10 opens the patient Options menu.

4. Select "Patient Forms" to display the Patient Forms list.

- Once you have selected a form or forms to associate with this patient, those forms will appear in this list.

5. Click Add/Insert to display the list of available forms.

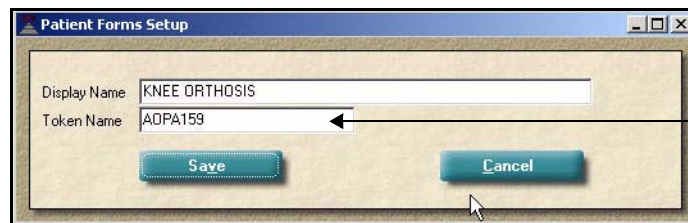

6. Select the name of the form you want to associate with the current patient.

HINT:

Once you complete step 6, you can press Ctrl + Shift + P to display the Patient Forms Setup window. This allows you to rename the form. This is handy if you would like to use a form name that is easier for you to recognize in particular situations.

**DO NOT CHANGE
THE TOKEN
NAME!**

Example:

You may want to rename one of the survey forms to “Short Survey” and the other to “Long Survey” which might make it easier for you to quickly distinguish which survey is which.

IMPORTANT!

DO NOT CHANGE THE TOKEN NAME. The token name is used by the system to identify each form. If you change the token name, the system will no longer be able to recognize and associate the selected form with the current patient.

7. Click Add/Insert to display the form.

The screenshot shows a software window titled "Orthotics and Prosthetics Group of America Patient Outcomes at Three Months" for patient "Priscilla Wagner". The window has three tabs: "Functionality", "Functionality chnd", and "Medication/General". The "Functionality" tab is active. It contains a form with the question "What is your functional status today for the following activities of daily living?". A date field shows "Today's Date 07/30/2002". Below the question are three columns of radio buttons labeled "No Assistance", "Some Assistance", and "Unable to do". The activities listed are: "Walk or transfer on level surfaces around home", "Walk fast or slowly and get around without much difficulty", "Walk and manage curbs, stairs, etc. outside home", "Walk one block without stopping in 2-3 minutes", "Walk a half mile without stopping in 20 minutes", "Climb one flight of stairs", "Walk down one flight of stairs", "Take a shower or bath", "Get dressed", "Do the same work as a year ago", "Bend over to pick up a bag of groceries", and "Get up from the floor if you have been lying down". At the bottom of the form are three buttons: "Save", "Cancel", and "Place In Word".

- If you don't want to complete the form at this point, skip to step 9.
8. Enter or select the appropriate information in the form for this patient.
9. Click Save to save the information and store this form in the Patient Forms list associated with the current patient.
- You can go back and review this form at any time, see page 5-45.
 - You can also save the form in MS Word (.doc) format, see page 5-46.

Review, Edit, Delete, and Duplicate Patient Forms

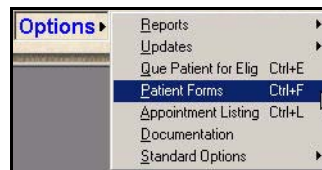

Once you associate a specific form with a particular patient (see page 5-42), you can go back and review and/or make changes to the form. You can also delete or duplicate the form for the patient.

From the Patient list (see page 5-32):

1. Select the name of the patient for whom you want to access an associated form.
2. Click Edit to display the patient's record.
3. Click "Options" in the lower left corner of the patient record to display a list of options.

**SHORT CUT**

F10 opens the patient Options menu

4. Select "Patient Forms" to display the Patient Forms list
 - *Any and all forms associated with this patient will appear in this list.*
5. Click Edit to display the first page of the selected form (see page 3-8).
 - *From here you can just review or edit as needed. If you make changes, you will need to make sure that you click Save to store the changes.*

OR

Click Delete to display a confirmation message asking you if you are sure you want to delete the current form from the patient's record (see page 3-8).

- *If you want to continue with the deletion, click Yes. If you do not want to delete the form, then click No to leave the form in place.*

OR

Click Duplicate to make a copy of this form within the patient's record (see page 3-8).

- *You might want to do this if you need to keep several of the same forms for this patient at different times.*

Example:

You may want to update this form every 3 months without losing any of the previous information. By creating an identical form, you can edit the new form using the most current information.

**NOTE:**

You can also convert certain Futura forms to MS Word (.doc) format, see page 5-46

Save a Patient Form in MS Word Format

There may be times when you want or need to convert certain patient forms into a more universal document format. Converting forms to MS Word format allows you to easily E-mail such documents to recipients who, more than likely, have the ability to open and print Word documents on their system. In addition, this conversion allows you to easily edit text, as well as import other graphics and objects.

IMPORTANT!

In order to save the form in MS Word, you **MUST** have access to the MS Word application. No other word processing application (e.g., Microsoft Works, WordPerfect, ClarisWorks, etc.) can be used.

The following is a list of forms available for conversion to MS Word (see page 5-40 for information about each):

- **Initial Patient Assessment LE Prosthetics,**
- **Initial Patient Assessment LE Orthotics,**
- **Orthotic and Prosthetic Group of America Patient History Information**
- **Orthotic and Prosthetic Group of America Patient Outcome(3 months)**
- **Progress Note LE Prosthetics**
- **Progress Note LE Orthotics**

. IMPORTANT!

While the procedure below shows you how to convert a Futura form to MS Word, you will need to refer to user information from MicroSoft (printed user guide, online help, etc.) to find out how to work within MS Word once the conversion is made.

From the Patient list (see page 5-32):

1. Select the name of the patient for whom you want to access an associated form.
2. Click Edit to display the patient's record.
3. Click "Options" in the lower left corner of the patient record to display a list of options.

SHORT CUT

F10 opens the patient Options menu

4. Select "Patient Forms" to display the Patient Forms list.
 - *Any and all forms associated with this patient will appear in this list.*
5. Click Edit to display the first page of the selected form (see page 3-8).
 - *From here you can just review or edit as needed. If you make changes, you will need to make sure that you click Save to store the changes.*

- Click "Place in Word" to automatically open MS Word on your system and display the newly converted form.

The screenshot shows a Microsoft Word window titled "Document1 - Microsoft Word". The menu bar includes File, Edit, View, Insert, Format, Tools, Window, and Help. The toolbar shows various icons for file operations, editing, and formatting. The document content is as follows:

Patient Outcome at Three Months
07/30/2002

Re Patient: Priscilla Wagner
ReDoc: Linda Bradbury

FUNCTIONALITY
 Walk or transfer on level surfaces around home: No assistance
 Walk fast or slowly and get around without much difficulty: No assistance
 Walk and manage curbs, stairs, etc. outside home: No assistance
 Walk one block without stopping in 2-3 minutes: No assistance
 Walk a half mile without stopping in 20 minutes: No assistance
 Climb one flight of stairs: No assistance
 Walk down one flight of stairs: No assistance
 Take a shower or bath: No assistance
 Get dressed: No assistance
 Do the same work as a year ago: No assistance
 Bend over to pick up a bag of groceries: No assistance
 Get up from the floor if you have been lying down: No assistance
 Put on your orthosis or prosthesis: No assistance
 Take off your orthosis or prosthesis: No assistance
 Vary the speed of your walking with ease: No assistance
 Ability to play 18 holes of golf without a cart: No assistance
 Participate in active athletics, eg. volleyball: No assistance
 I have lots of energy: All the time
 I feel tired: All the time
 I am happy: All the time
 I am depressed: All the time
 I experience pain: All the time
 I feel anxious: All the time

MEDICATIONS
 Number of medications taken daily by patient: 1

EFFECTS
 Effects inflicted upon patient due to orthotic or prosthetic treatment:
 Medication: Increase
 Endurance: Increase
 Comfort: Increase
 Pain: Increase

The status bar at the bottom shows: Page 1, Sec 1, 1/1, At 1", Ln 1, Col 1, and a row of icons for Print, Find, Replace, and other functions.

- You can edit the contents as well as import other text and graphics. Please refer to the MS user documentation provided with your MS software.

IMPORTANT!

Once you convert and display the form in the Word format document, you will need to save it as you would any other Word document. Please refer to Microsoft's online help or user guide for more information.

Printing Patient Forms

IMPORTANT!

When your system is installed by your Futura representative, he/she will help you make sure your matrix printer is set up to work with the Futura forms. Once that is set up, DO NOT use the paperfeed knob or the micro-line feed to adjust the form. Because the form feeding is set up to automatically feed to the precise location at which printing will begin for each form, you should only use the Auto-feed/Form-feed/Eject button (the name and location of this button will differ depending upon the model of printer you are using).

Updating Demographics

This feature allows you to change information in a patient record, and apply that updated information to any and all transactions and/or work orders associated with the patient.

Example:

You create a transaction at 9:00 am for Martha Smith. However, at 11:00am she phones you to let you know she has tertiary insurance that she didn't know about. You could go into her patient record, add the tertiary insurance information, then update demographics. This would send the tertiary insurance information to the transaction you created at 9:00am.

IMPORTANT!

You must use this feature cautiously. Because ALL associated transactions and work orders are affected by this action, you need to make sure that is what you want to do. You may not want previous transactions/work orders to have this updated information as it may not apply to prior visits, etc. If this is the case, you will need to individually edit only those transactions/work orders that require the updated information.

From the Patient list (see page 5-32):

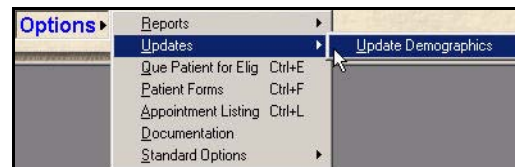

1. Select the name of the patient for whom you want to update information.
2. Click Edit to display the patient's record.
 - Please see "Patient Record" on page A-43 for more information about the fields on this record.
3. Change or add information as needed.
4. Click "Options" in the lower left corner of the patient record to display a list of options.

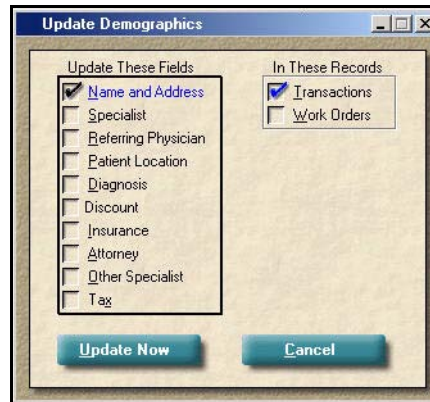

SHORT CUT

F10 opens the patient Options menu

5. Select "Updates" to display a submenu.

6. Select "Update Demographics" to open the Update Demographics window.

7. Select which information you want to have updated.
8. Select whether you want to apply the changes to associated Transactions and/or to Work Orders.
9. Click Update Now to apply the changes as specified to all associated Transactions and/or Work Orders.
 - Depending upon the number of transactions and/or associated with this patient, the update may happen instantaneously or take several seconds.

Run Basic Patient Reports

In addition to the reports you can run using the general Reports function of Futura, you can run a few additional reports related to the currently displayed patient record only.

You can run:

- **Deductible Summary Reports** that list all unpaid deductibles for the current patient.
- **Chart Reports** that include all patient information and notes accumulated throughout the patient's treatment.
- **Note Reports** that include all patient (clinical) notes, as well as notes from transactions.

Run a Deductible Summary Report

This is useful if and when you have deductibles listed for the current patient. It allows you to view all unpaid deductibles for which this patient is responsible. In addition, when running this report, you can specify whether you want to view deductibles by service, Entry or Post dates. You can also include pending and/or history transactions. Futura also allows you to further specify whether or not you want to run only certain account types (see page A-43) for the report.

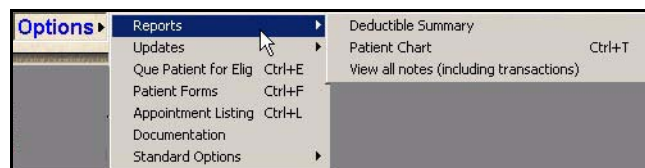

From the Patient record (see page 5-32):

1. Click "Options" in the lower left corner of the patient record to display a list of options

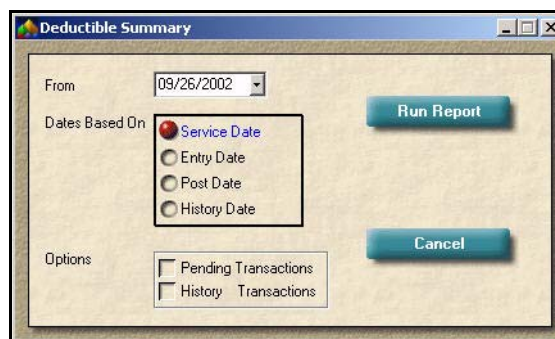

SHORT CUT

F10 opens the patient Options menu.

2. Go to Reports ► Deductible Summary to display the Deductible Summary options window.

3. Select the appropriate options according to which unpaid deductibles you want to view.
4. Click Run Report to display a list of any unpaid deductibles for the current patient.
5. Click in the upper right corner of the window to close it and display the print option to the list as needed.

Run a Chart Report

This report will include any and all information that has been recorded in the Futura application for the current patient. Since The Health Insurance Portability and Accountability Act of 1996 (HIPAA) has strict regulations as to how a patient's paper chart/folder is to be handled, running a chart report allows you to maintain and keep the patient's paper chart in tact and in place. Such a report provides the same information you have in the patient's folder (as long as you have entered it into the system), and makes an easy method for information to be transported or sent.

**NOTE:**

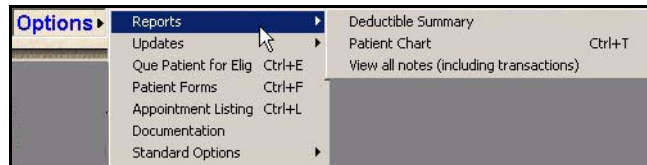

The format and the way the information is presented in this report can be customized by Futura. Please contact Futura Technical Support for assistance.

From the Patient record (see page 5-32):

1. Click "Options" in the lower left corner of the patient record to display a list of options.

**SHORT CUT**

F10 opens the patient Options menu

2. Go to Reports►Patient Chart to display the patient's chart in Notepad format.
3. Click  in the upper right corner of the window to close it and display the print option to the list as needed.

Run a Patient Notes Report

You can collect and combine any and all patient/clinical and transactions notes that have been accumulated for the current patient.

IMPORTANT!

The Health Insurance Portability and Accountability Act of 1996 (HIPAA) regulations prevent you from editing patient notes. You can append to the notes, but you cannot delete or change them. While this technically can be done according to security settings in Futura, it is recommended that you NEVER edit patient notes.

If you attempt to edit the notes (without the appropriate security rights), the existing notes will “disappear” from the screen, and Notepad goes into “append mode”. The appended notes will be time and date stamped and the user name will also be recorded. You can then save and print the newly added notes. At that point, the existing notes will reappear.

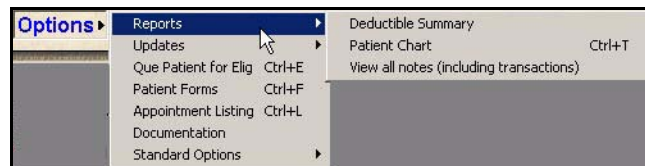

From the Patient record (see page 5-32):

1. Click “Options” in the lower left corner of the patient record to display a list of options.

SHORT CUT

F10 opens the patient Options menu

2. Go to Reports►View All Notes (including Transactions) to display the patient’s chart in Notepad format.
3. Click  in the upper right corner of the window to close it and display the print option to the notes as needed.

View Patient Documentation

You can use this option to view and print any and all patient related electronic processed documentation such as prescriptions, claims, and letters. This is an excellent way to resolve any problem issues to show what was and wasn't done.

Example:

On September 4th, Esther Escobar's insurance company reports that they have not received a claim that you show as having been processed on July 27th. You can easily open her record, print out this proof, and forward it to the insurance company as verification of the processed claim.

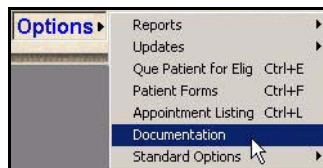

From the Patient record (see page 5-32):

1. Click "Options" in the lower left corner of the patient record to display a list of options.

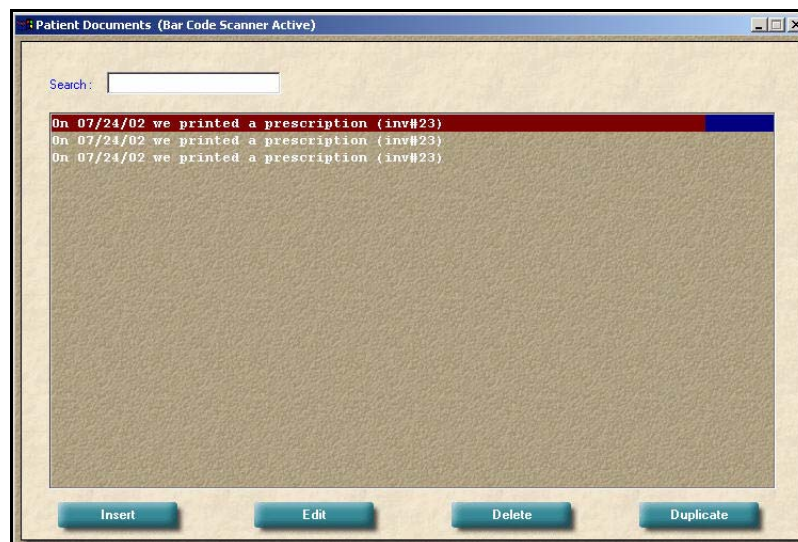

SHORT CUT

F10 opens the patient Options menu.

2. Click on Documentation to display a list of patient documents.

Working with Transactions

Besides working with Patient accounts and records, the majority of your daily tasks will be spent creating and working with Transactions.

Note:

- If you need to create a transaction for a patient you have not yet set up in the system, you can do so from the transactions screen. You can either enter the patient as a one-time visit, or insert a name from the existing patient list.
- Any information carried over into a transaction from a patient's stored record can be edited at the time the transaction is created.

Creating Transactions

Each transaction allows you to input, store, link, and process patient information with office visit and billing information. You will need to create a transaction for every patient for every visit. However, this process is easier once a patient is permanently added to the system. This does not mean that you can't add a patient as a one time visitor.

There are 2 ways to create a transaction. The most common way is to add a transaction from a selected patient in the Patients list (see below). The other is to open a new transaction and insert a patient's name. The second method will most commonly be used for walk-in patients rather than permanent patients.

Create a Transaction from the Patient List:

When you create a transaction from the Patient list, certain patient information stored for the specified patient will automatically appear in the transaction record. Besides basic information such as name, address, and phone number, some of the other patient information carried over includes: assignment accepted status, diagnosis codes, insurance information, referring physician.

NOTE:

Once you have opened a patient transaction record, be sure to verify the information as appropriate for this specific transaction, then skip to step 3 on page 5-58.

- When you are creating a transaction for a patient record that has already been set up with prices, POS, TOS, and HCPC codes, this information will autofill in this transaction.
- If you have set up modifiers on an account type set up for this patient, the modifier information will autofill in this transaction.
- If you have set up the fee schedule on the selected HCPC codes and within the patient's insurance information, the price will autofill from there for this transaction.

HINT:

It is a good idea to confirm that this information is appropriate for the current transaction (e.g., it is not uncommon that you will need to change the diagnosis code and/or specialist from visit to visit for a particular patient).

1. Go to Receivables ► Patients to display the Patients list.

Patients (Bar Code Scanner Active)

Search: Balance Transactions

3. Enter the information as appropriate for the following tabs:

- Please see “Transaction Record” on page A-96 for more information about the fields on this record.

SHORTCUT:

If you want to immediately begin entering charges (service lines), click Insert (or press the Insert key) to display the Service Line window. Refer to page 5-60 for more information about service lines.

Transactions

This is the main page of the transactions feature. You will need to enter all of the basic information for a specific patient. If the patient’s information is already in the system, you will only need to select the patient name from the list, and all stored information will automatically appear in the corresponding fields of the Transaction page.

IMPORTANT!

- If you are creating a transaction for an existing patient, then you need to use the Name drop down menu to select the patient. If no existing patient name is selected from the patient list, then this transaction will default to a “walk-in” (1 time only) transaction and will not be associated with the existing patient’s permanent record.
- When you are creating a transaction for a patient record that has already been set up with diagnosis, specialist, physician information, this information will autofill in this transaction.
- If you have set up modifiers on an account type set up for this patient, the modifier information will autofill in this transaction.
- If you have set up the fee schedule on the selected HCPC codes and within the patient’s insurance information, the price will autofill from there for this transaction.
- It is a good idea to confirm that an existing information that is automatically carried over from the patient record is appropriate for the current transaction (e.g., it is not uncommon that you will need to change the diagnosis code and/or specialist from visit to visit for a particular patient). The majority of the information that automatically appears from the patient record can be changed per transaction without affecting the permanent patient record.

Insurance 1 - 2 tab

Contains all primary and secondary insurance information needed for billing. If this information is already associated with a patient for whom you are creating a transaction, the information will automatically appear in the corresponding fields.

HINT

Part of the convenience of Futura software is that you can change insurance carriers per transaction. This means that for each transaction you create for a patient, you can change the insurance carrier (without changing the insurance information stored in the patient record. This is very useful for one-off situations.

Example:

Fernando Curochio is a Medicare patient. However, his recent hospitalization means that your services need to be billed to the hospital and not the patient’s insurance. Futura allows you to quickly and easily change the carrier on the transaction for this bill only (to the hospital instead of Medicare). This one time change will be stored in the transaction you create, but will not affect the patient’s permanent record.

Insurance 3 tab

Contains any information available on a 3rd (tertiary) insurance source if there is one. If this information is already associated with a patient for whom you are creating a transaction, the information will automatically appear in the corresponding fields. Please refer to the HINT shown above.

Claim

This page allows you to process and track the claim associated with this transaction, if there is one. It allows you to keep track of any claims filed with the patient’s insurance(s) of record, and any other action or result that has taken place from that claim.

Payments

Just as its title implies, you can enter and track payments using this window. You can enter the method of payment (e.g., check, cash, credit, etc.), as well as the amount and date of the payment. You can also enter any additional information related to a particular payment (e.g., batch number, check number, notes, etc.). For more information, see page 5-71.

You can also apply specific portions of a payment to various service lines within the transaction (see pages 5-60 and A-87 for information about adding payments to specific service lines). You may also apply batch payments (see page 5-78).

Incident

the Incident tab is only used if/when the patient's visit is related to an accident of some sort vs. a systemic problem (i.e., car accident vs. diabetic related amputation). You can record cause, date, and ability to work. You can also associate any additional documentation and special program information. You can also record authorization numbers here.

Job Tracking

This tab allows you to follow specific steps or portions of a patient's course of treatment. You can also keep track of how long the particular step will take, as well as when, and who performed the service. For more information, see page 5-86.

Balance

Contains balances from all sources of insurance for this specific transaction, as well as status of the account (i.e., 30, 60, and 90 days), and total balance of this transaction.

4. Click Save to store the information for the transaction.

Adding Service Lines to a Transaction

When creating a transaction, you need to include at least one service line. Service lines are based on HCPC codes and are the basis for all your patient and insurance billing.

NOTE:

- Service lines may or may not be based on products. If based on a service visit only, you will need to use a miscellaneous HCPC.
- You may also use MultiCodes (see page 5-68).

From the main Transaction record window (see page 5-54):

Click here to place the cursor in the service line area.

OR

Press Insert to display the service line window.

Click here to display the service line window as shown in step 1.

Click here if you need to change the service date.

HINT:

The Change Service Date feature is also very useful when there are multiple service lines since it can be used to refresh the date for "all" service lines at one time.

These dates are all significant as they are used when formulating various reports.

These dates can only be changed by users with supervisory/administrative rights.

You can use the MultiCode tool to add service lines (see page 5-68 for more information).

1. Click on the Service line area to place the cursor there.
 - You will not be able to see the cursor when it is placed in the service line area.

SHORTCUT:

- Click Insert or press the Insert key to display the service line window.

2. Click Add/Insert to display the service line window.

3. Enter the appropriate information into the fields.

- Please see “Transaction Record” on page A-96 for more information about the fields on this record.

IMPORTANT!

DO NOT leave the Allowed field at 0.00, otherwise, the entire amount will be automatically written off.

NOTE:

Once you have entered a total payment into the transaction, you can then go to the service line window and apply portions of that payment to each service line as appropriate (see page A-87 for information about adding payments to specific service lines). However, remember that if you do not include a total payment first, the detailed service line payments will not be saved under the Payment tab of this transaction.

SHORTCUT:

Press F2 to display the HCPC code list.

NOTE:

- If you have set up modifiers on an account type set up for this patient, the modifier information will autofill in this transaction.
- If you have set up the fee schedule on the selected HCPC codes and within the patient’s insurance information, the price will autofill from there for this transaction.

4. Specify a CMN, if applicable, from the list.
 - Until you add one or more CMN Certificate Types to the list, "<None>" will be the only item in the list as shown below.
 - See "Add A Certificate Type To The CMN List" on page 5-67 for more information.

5. Click Save to store the information and display it in the service line field.
6. Click Save to store the information in the transaction and close the transaction record.
 - Repeat steps 1 through 8 for each service line you want to add. You can add an unlimited number of service lines. However, once you exceed 6, the screen will automatically scroll so you can move through this list.

HINT:

If you are going to be adding more than one service line to this transaction, you can click on Apply to save a service line without closing the transaction. This will allow you to continue to add service lines without having to reopen the transaction record each time.

Editing or Deleting Service Lines

You can edit and delete service lines in the same way you edit and delete other items in a list.

From the Transactions record (see page 5-54):

The screenshot shows the 'Transaction' window with tabs for Payments, Incident, Job Tracking, and Balance. The 'Incident' tab is active, showing details for 'Ins. 162'. The 'Service Lines' section contains a table with the following data:

Srv From	Qty	HCPC	Mod1	Mod2	Mod3	Mod4	Pnt	Fee	Total
01/16/03	1	E0660	RL				1	1525.50	1525.50
01/16/03	6	A6219	RL				1	4.00	24.00

Below the table, the SubTotal is 1549.50, Tax is 0.00, Discount is 0.00, and Total is 1549.50. At the bottom, there are buttons for Edit, Insert, Delete, Duplicate, Change Svc Date, MultiCode, Apply, Save, Options, Work In Progress, and Cancel.

These dates are all significant as they are used when formulating various reports.

These dates can only be changed by users with supervisory/administrative rights.

1. Click on the service line item you want to edit or delete.
2. Click Edit to open the Service Line window for editing.

OR

Click Delete to delete the specified service line item.

Change the Post Status of a Transaction

There may be times when you need to change the status of a transaction.

Example:

Your patient, Alvin Tostig, has a transaction currently with a status of “Open”. However, the CMN for Mr. Tostig has not been received yet. You can use the procedure below to change the status from “Open” to “CMN Pending”.

Also, remember that only transactions with a status of “Open” will be included in the Daily Close (see page 5-115).

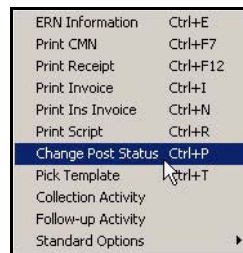

From the Transactions record (see page 5-54):

1. Click “Options” in the lower left corner of the Transaction record to display a list of options.

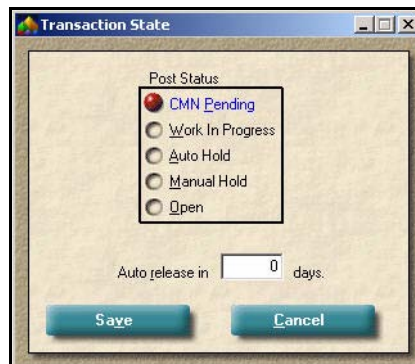

SHORT CUT

F10 opens the transaction Options menu

2. Select Change Post Status to open the Transaction State window.

3. Select the status you want to apply to the current transaction.
 - See page A-117 for an explanation of each of the status options.
4. Click Save to make the change to the current transactions.

Change the Service Date of a Transaction

When you create a transaction, the system will default service date to match the entry date. The difference being that the entry date is the date you create the transaction, and the service date is the ACTUAL date of service or “delivery” of an item to a patient.

There may be times when you may need to change the service date because the transaction was not created the same day as the service (meaning that it will automatically default to the entry date - which inaccurately reflects the date of service or delivery). You may also find it necessary to change the service date in a case where a transaction has remained in a “work in Progress” state for some time (e.g., if you were waiting for a device to be ready or delivered from a vendor), and you are now ready to “deliver” the item to the patient. In a case such as this, you will need to change the service date of the transaction. would need to change the service date to the actual delivery date.

**HINT**

The Change Service Date feature is also very useful when there are multiple service lines since it can be used to refresh the date for "all" service lines at one time.

Example:

Your patient, Dat Nguyen, is waiting for his prosthetic device to be completed. You have created a transaction on 1/20/03 to record the service and wait for the device to be completed. Let's say that the device is finally completed on 2/11/03 and Mr. Nguyen will be in on 2/13/02 to pick up the device. You will want to change the service date of the transaction to match the date that the patient comes in to pick up the item.

From the Transactions record (see page 5-54):

Service date
has defaulted to
the entry date.

The screenshot shows the 'Transaction' window with tabs for Payments, Incident, Job Tracking, and Balance. The 'Transaction' tab is active, showing patient details for 'Dat Nguyen' and a service line table. The 'Serv From' column in the table shows '01/20/03', which is circled in red. Below the table, the 'Change Svc Date' button is also circled in red. Other buttons like 'Edit', 'Insert', 'Delete', 'Duplicate', 'MultiCode', 'Apply', 'Save', 'Cancel', and 'Options' are visible.

1. Click Chg Svc Date to display the Change Service Dates window.

The 'Change Service Dates' window is shown with 'From' and 'To' date fields. Both fields are set to '1/20/2003'. There are 'Process' and 'Cancel' buttons at the bottom.

2. Enter/select the appropriate dates of service for this transaction.
3. Click Process to change the dates as specified and return to the transaction.
 - *The new date will appear on the service line.*

Service date has been changed. —

Srv From	Qty	HCPC	Mod1	Mod2	Mod3	Mod4	Pnt	Fee	Total
02/13/03	1						1	1850.00	1850.00

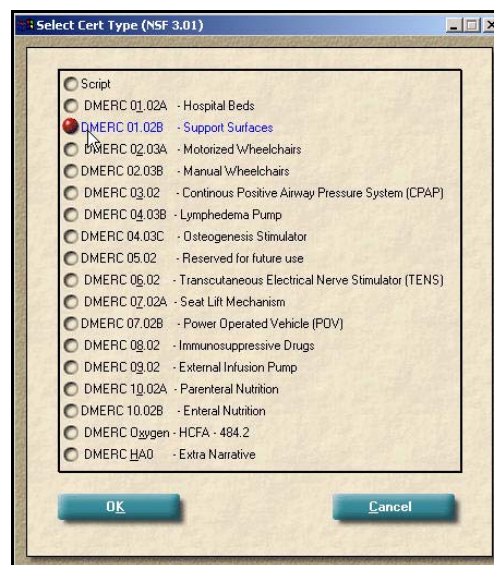

4. Click Save (or Apply) to make the date change to the current transaction.

Add A Certificate Type To The CMN List

From the Select CMN list (see page 5-62):

1. Click Insert to display the list of Certificate Types.

2. Select the Certificate Type you want to add to the list.
3. Click OK to add the selected Certificate type to the list and return to the service line window.

Using Multicodes in a Transaction

Once you have created a group or set of MultiCodes, you can easily use them to complete the service line area of a transaction. MultiCodes provide you with a set of reusable information for procedures or visits that entail the same HCPC codes (see page 4-29).

NOTE:

Even when you use MultiCodes you can continue to add other codes not in the selected group for a particular transaction.

From the patient's Transaction record (see page 5-54 or 5-57 for more information about creating a transaction):

The screenshot shows the 'Transaction' window with various tabs (Payments, Incident, Job Tracking, Balance) and a 'Transaction' sub-tab. It contains fields for Company, Name, Address, City/State, Spclty, Referral, Location, and several diagnostic codes (Diag 1-4). Below these fields is a table with columns: Srv From, Qty, HCPC, Mod1, Mod2, Mod3, Mod4, Pnt, Fee, and Total. At the bottom, there are buttons for Edit, Insert, Delete, Duplicate, Change Svc Date, MultiCode (circled in red), Apply, Save, and Cancel. There are also status indicators for SubTotal, Tax, Discount, and Total.

1. Click MultiCode to display the Select MultiCode list.

The screenshot shows the 'Select MultiCodes (Bar Code Scanner Active)' window. It has a search bar at the top with a 'Select' button. Below the search bar, there is a list of MultiCodes, with the first one being 'BK BK W/LOCK PIN'. Below the list, there are buttons for Insert, Edit, Delete, and Duplicate. The status bar at the bottom indicates '<Search Completed>'.

2. Select the MultiCode you want to use for this transaction.
3. Click Select to display the Pick List window for this MultiCode group.

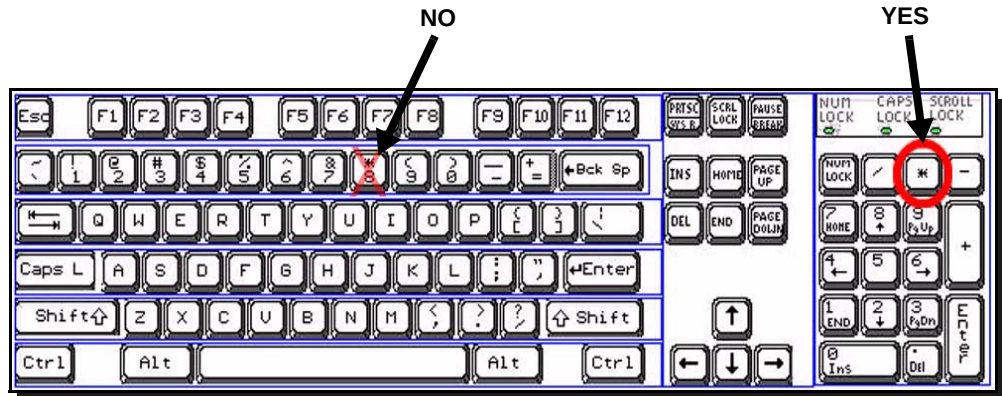

**IMPORTANT!**

If you set this list to use all codes as the default, once you click the Select button, the MultiCodes will automatically appear in the service line area of the transaction. You will not see the Pick list and you can skip to step 7 on page 5-70).

4. Click on the code you want to include in the transaction.
5. Press the asterisk key (*) on your number keypad to designate the selected code for this transaction (see **IMPORTANT** note and illustration below).
 - An asterisk will appear next to each code as you selected to indicated that it will be included in the transaction.

**IMPORTANT!**

You **MUST** use the asterisk key on the number keypad portion of your keypad. The asterisk that appears above the 8 key on the alphanumeric portion of your keyboard will not work for this function. See illustration below.

ON YOUR KEYBOARD...

6. Press Esc to close the Pick List window when you have completed your selections and return to the Transaction window.

Srv From	Qty	HCPC	Mod1	Mod2	Mod3	Mod4	Pnt	Fee	Total
10/01/02	1	L5300					1	3128.60	3128.60
10/01/02	1	L5629					1	302.51	302.51
10/01/02	1	L5667					1	1593.71	1593.71
10/01/02	1	L5910					1	344.75	344.75
10/01/02	6	L8420					1	23.86	143.16
10/01/02	2	L5620					1	264.64	529.28

SubTotal: 6794.48 Tax: 0.00 Discount: 0.00 Total: 6794.48

- Repeat steps 1 through 7 for each set of MultiCodes you want to include in the current transaction.

NOTE:

The chosen MultiCode group will appear in the service line. You can add to, edit, and delete (see pages 5-60 through 5-63) any of the codes shown in the service line area as you would any other service lines without affecting the original set of MultiCodes.

7. Click Apply to save the selected MultiCodes in the current transaction without closing the Transaction window.

- Repeat steps 1 through 7 for each set of MultiCodes you want to include in the current transaction

OR

Click Save to store the transaction with the selected MultiCodes and close the Transaction window.

Applying Regular Payments, Write-offs, and Adjustments

Of course, one of the most important aspects of your daily tasks is handling the money coming into your business. Futura software allows you to easily and quickly post and maintain payments (monies coming in from insurance companies, patients, etc.), Write offs (income that you know you will never receive), and Adjustments (when monies change from one source to another).

NOTE:

Once you enter a total payment, you can apply appropriate portions of that payment to individual service line items (see “Adding Service Lines to a Transaction” on page 5-60).

HINT:

Payments for several patients from a single source can be processed as Batch Payments (see page 5-78 for more information).

Posting a Payment to a Transaction

From the Transactions record (see page 5-54):

In this example, the transaction is still in the WIP status. This means that no AR activity will be applied and all payments will be shown as a negative number (see NOTE on next page).

The screenshot shows the 'Transaction' window with the 'Payments' tab selected. The 'Company' is '(1) ABC Company' and the 'Name' is 'Dat Nguyen'. The 'Invoice #' is 38. The 'Serv. Date' is 01/16/2003 and the 'Entry Date' is 1/16/2003. The 'Post Date' is blank and the 'Hist. Date' is blank. The 'Accept Assignment' checkbox is checked and circled in red. The 'Discount' is 0. The 'Diag 1' is 138, 'Diag 2' is 250.8, 'Diag 3' is 321.0, and 'Diag 4' is 315.4. The table below shows the following data:

Srv From	Qty	HCPC	Mod1	Mod2	Mod3	Mod4	Pnt	Fee	Total
01/16/03	1	E0660	RL				1	1525.50	1525.50
01/16/03	6	A6219	RL				1	4.00	24.00

The 'SubTotal' is 1549.50, 'Tax' is 0.00, 'Discount' is 0.00, and 'Total' is 1549.50. The 'Options' button is circled in red, and the 'Work In Progress' button is also circled in red.

If you select the Accept Assignment option, the balance for a service will be automatically applied to the designated insurance company.

If you do not use this option, the balance will be directly applied to the patient.

1. Click on the Payment tab to display the payment list

- Until you enter one or more payments, nothing will appear in the list as shown below.

The Transaction window displays a tabbed interface. The 'Payments' tab is selected, showing a large empty list area. Below the list are buttons for 'Insert Payment', 'Edit Payment', 'Delete Payment', 'Save', 'Apply', and 'Cancel'. At the bottom, there are sections for 'Insurance Balance' and 'Patient Balance', each with input fields for 'Primary Insurance', 'Secondary Insurance', 'Tertiary Insurance', 'Current', and 'Deductible'.

2. Click Add/Insert Payment to display the Payment Activity window.

The Payment Activity for Dat Nguyen window contains the following fields: Type (dropdown), Amount (0.00), Date (01/16/2003), Entry (01/16/2003), Post (/ /), History, Batch # (0), Check #, and Note. There are Save and Cancel buttons at the bottom.

3. Select a payment type (see page 5-75).
4. Enter the appropriate information into the rest of the fields (see "Transaction Record" on page A-96 for more information).

5. Click Save to display the payment in the payment list (refer to examples of how payments appear on page 5-74).

**NOTE:**

- Until a transaction has been processed as a claim, payments will appear as a negative amount in the balance fields as shown on in the examples on page 5-74.
- When you have designated a transaction as “Accept Assignment” the transaction balance will be automatically and directly applied to the designated insurance/payor (see illustration on previous page). If you have NOT used the “Accept Assignment” option, any balance will automatically be applied to the patient. However, no such balance application will be seen until the transaction is processed and filed as a claim.
- If you are applying a payment to a WIP transaction, the payment amount will appear as a negative (either in the insurance or patient balance - depending on the selected payment type). Until the status of such a transaction is changed from WIP to Open or Posted, no AR activity will be applied. Once the transactions is changed to an Open or Posted status, the transaction balance will appear under Patient Balance (see examples on page 5-74).
- *Repeat steps 2 through 5 for every payment you need to record.*

**NOTE:**

Once you have entered a total payment into the transaction, you can then go to the service line window and apply portions of that payment to each service line as appropriate (see pages 5-60 and A-87 for information about adding payments to specific service lines). However, remember that if you do not include a total payment first, the detailed service line payments will not be saved.

6. Click Save when you have completed all payment activities to close the transaction record.

**HINT:**

If you are going to be adding additional information to this transaction record, you can click Apply to save the payment information without closing the transaction record itself.

The Appearance of Payments in Transaction Balances

See **NOTE** on previous page for more information.

Examples: Total balance on this example transaction is \$1,549.50. Toward which the following example payments are being applied.

Payment on a WIP Transaction

The screenshot shows the 'Transaction' window with tabs for Transaction, Ins. 1&2, Ins. 3, and Claim. The 'Payments' tab is active, showing a payment of 125.00 Cash on 01/16/03. Below the payment list are buttons for Insert Payment, Edit Payment, Delete Payment, Save, Apply, and Cancel. At the bottom, the 'Insurance Balance' and 'Patient Balance' are displayed. The Patient Balance 'Current' field is circled in red and shows -125.00.

In this example, the payment has been applied to a transaction that is still at the Work In Progress (WIP). In this case, a patient cash deposit was applied, therefore, showing a negative Patient Balance.

Balance on an Open transaction

The screenshot shows the 'Insurance Balance' and 'Patient Balance' section. The 'Patient Balance' 'Current' field is circled in red and shows 1549.50.

Now that this transaction has been changed to an Open status, the transaction balance has been given to the patient.

Remember, until this transaction has been processed and filed as a claim, even if the Accept Assignment option has been checked, no balance will be applied to the Insurance.

Cash Payment on an Open transaction

The screenshot shows the 'Insurance Balance' and 'Patient Balance' section. The 'Patient Balance' 'Current' field is circled in red and shows 1424.50.

In this example, a cash payment of \$125.00, has been applied to the Open status transaction, so it was therefore, deducted from the patient balance.

Primary Payment on an Open transaction

Using the example as shown above, a Primary Payment of \$500.00 has been applied to the Open status transaction, so it now appears as a negative on the Insurance balance since no claim has yet been filed.

The screenshot shows the 'Insurance Balance' and 'Patient Balance' section. The 'Insurance Balance' 'Primary Insurance' field is circled in red and shows -500.00.

Transactions Balances Once Claim Is Filed

After the claim for this transaction is filed, the remaining balance (after the payments are deducted) appears here.

The screenshot shows the 'Insurance Balance' and 'Patient Balance' section. The 'Insurance Balance' 'Primary Insurance' field is circled in red and shows 924.50. The 'Patient Balance' 'Current' field is circled in red and shows -125.00.

After the claim for this transaction is filed, cash payment now appears as a credit to the patient.

Selecting a Payment Type

This selection is very important as it will distinguish the monies being posted as a payment, a write off, or an adjustment.

From the payment window (see page 5-72):

The screenshot shows the 'Payment Activity for Dat Nguyen' window. It contains several input fields: 'Type' (with a dropdown arrow circled in red), 'Amount' (0.00), 'Date' (01/16/2003), 'Entry' (01/16/2003), 'Post' (/ /), 'History', 'Batch #' (0), 'Check #' (empty), and 'Note' (empty). At the bottom are 'Save' and 'Cancel' buttons.

1. Click on the arrow next to the Type field to display the Payment Type list.

The screenshot shows the 'Select Payment Types' window. It has a search bar at the top and a 'Select' button. Below is a list of payment types and their descriptions:

Payment Type	Description
Automated Write-Off	System use only for Ins Allowed Adj
Cash	Credit to the Patient balance.
Check	Credit to the Patient balance.
Credit Card	Credit to the Patient balance.
Primary Payment	Credit to the Primary balance.
Secondary Payment	Credit to the Secondary balance.
Patient Deductible Payment	Credit to the Patient balance.
Patient Write-off	Credit to the Patient balance.
Primary Write-off	Credit to the Primary balance.
Secondary Write-off	Credit to the Secondary balance.
Patient Credit Adjust	Credit to the Patient balance.
Primary Credit Adjust	Credit to the Primary balance.
Secondary Credit Adjust	Credit to the Secondary balance.
Patient Debit Adjust	Debit to the Patient balance.
Primary Debit Adjust	Debit to the Primary balance.
Secondary Debit Adjust	Debit to the Secondary balance.
Refund Patient	Credit to the Patient balance.
Refund Primary	Credit to the Primary balance.
Deductible Not Met	Debit to the Patient balance.
<Search Completed>	

At the bottom are 'Insert', 'Edit', 'Delete', and 'Duplicate' buttons.

2. Select the appropriate payment type:

HINT:

Remember that in this situation, a credit deducts from the balance due and a debit adds to the balance due.

Automated Write-off

This payment type is used by the system to automatically adjust pricing when the usual and customary fee differs from the allowed.

Example:

Your usual and customary fees exceed Medicare's allowable fees by 20%. The Automated Write-off payment type will automatically write off that additional 20% preventing you from having to calculate it manually.

Cash

Choose if the patient is making a payment in currency.

Check

Choose if the patient is making a payment by personal check.

Credit Card

Choose if the patient is making a payment by credit card.

Primary Payment

Choose if you are posting a payment received from a patient's primary insurance company.

Secondary Payment

Choose if you are posting a payment received from a patient's secondary insurance company.

Patient Deductible Payment

Choose for any co-payment or deductible received from a patient.

Patient Write-off

Choose if there is an occasion when a specific amount of money is going to be deducted from the patient's balance.

Primary Write-off

Choose if there is an occasion when a patient's primary insurance company will not cover a particular fee, and it is not appropriate to bill the patient or the patient's secondary insurance for the amount outstanding. Choosing this payment type will deduct the specified amount from the primary insurance balance.

Secondary Write-off

Choose if there is an occasion when a patient's secondary insurance company will not cover a particular fee, and it is not appropriate to bill the patient or the patient's primary insurance for the amount outstanding. Choosing this payment type will deduct the specified amount from the secondary insurance balance.

IMPORTANT!

All credit adjustment functions are used for moving balances only. These will not be used by the system to record "income". Credit Adjustments reduce the balance, while Debit Adjustments (see next page) add to the balance.

Example:

An insurance company covers only a portion of Mr. Timmons' treatment. Since you are familiar with how much this insurance company generally covers, you go ahead and bill the company the full amount (\$500), but you also have asked Mr. Timmons to sign an agreement to pay any uncovered portion of the prosthetic costs.

When you receive and log the partial insurance payment (\$350), a balance for the uncovered portion will still appear for the insurance (\$150) on Mr. Timmons' record. Since you know you will not receive any further payment, you need to remove that balance from the insurance company (by entering a credit of \$150 the insurance company for the remaining amount - leaving the insurance balance as \$0).

However, to make sure that balance remains on Mr. Timmons' record, you then apply a debit (see Patient Debit Adjust on next page) to Mr. Timmons' balance so that he can be billed to pay the amount himself.

Patient Credit Adjust

Choose to reduce the patient's portion of payment due (e.g., when you receive a payment from the patient).

Primary Credit Adjust

Choose to reduce the patient's primary insurance portion of payment due (e.g., when you receive a payment from the primary insurance company).

This is generally done when there are certain items not covered by the patient's insurance for which the patient has signed an agreement to pay his/herself. This means that a credit will be made to the insurance company, then you'll need to apply a debit adjustment to the patient's balance (see example shown above and Patient Debit Adjust on next page).

Secondary Credit Adjust

Choose to reduce the patient's secondary insurance portion of payment due (e.g., when you receive a payment from the secondary insurance company). See example shown above and Patient Debit Adjust on next page.

Patient Debit Adjust

Choose this option if you are informed that a patient's bill or portion of the bill will not be covered by another source. The amount specified with this type will be applied against the patient's balance.

Primary Debit Adjust

Choose this option if you are informed that after billing, the patient's primary insurance company is actually responsible for the patient's bill or a portion of it. The amount specified with this type will be applied against the patient's primary insurance company's balance due.

Secondary Debit Adjust

Choose this option if you are informed that after billing, the patient's secondary insurance company is actually responsible for the patient's bill or a portion of it. The amount specified with this type will be applied against the patient's secondary insurance company's balance due.

Refund Patient

Choose this option if the patient is due a refund (usually due to an overpayment by either the patient or an insurance company).

Refund Primary

Choose this option if the patient's primary insurance company is due a refund (usually due to an overpayment).

Deductible Not Met

Choose this option if the amount specified needs to be applied to the patient's required deductible.

**IMPORTANT!**

PLEASE CONTACT FUTURA IF YOU WANT TO EDIT A PAYMENT TYPE. While you can add or change payment types, doing so for an existing transaction will change anything and everything else associated with that payment type. Therefore, editing a payment type is NOT RECOMMENDED as such an action could alter/corrupt thousands of payments already entered into your system.

3. Click Select to enter the selected payment type in the field.
4. Complete the rest of the form (see page 5-72).

Applying Batch Payments

It is often the case that insurance carriers and/or hospitals will send your office a payment to be applied to several patients. Instead of having to go through the steps for applying the payment to each patient, you can easily use Futura’s Batch Payments feature to credit the appropriate accounts with one entry. Another very important reason for using Batch Payments is because it can provide you with a line item detail about any payment made toward a patient’s account. It can provide you with information about which line items have been paid, not paid, shortages, etc.

Example:

You receive a check from MetLife. The EMOB accompanying the check indicates that the check should be applied to the accounts of Priscilla Wagner, Thomas Washington, Ju Nguyen, and Sandra Brown. It also tells you how much of the payment is to be applied to each account. By using Batch Payments, you can enter the check information one time, while applying it appropriately to each account as indicated. In addition, the EOMB will provide you with additional information about applying the payments for specific service lines on the corresponding accounts (e.g., payment should be applied to service line 1 and 5).

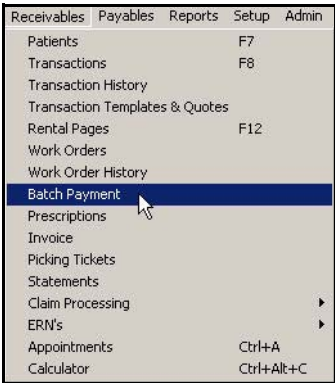

IMPORTANT!

In order to use Batch Payments for a payment from a hospital, the hospital must be set up as an insurance carrier (see page 4-11).

NOTE

- Batch payment summary information can be reviewed by running the Payment Sheet report (see page 7-19). In addition, you can review batch payment details by running the Payment Journal report (see page 7-19).
- You can also add detail to line items by entering payments into the appropriate service lines (see pages 5-60 and A-87 for information about adding payments to specific service lines).

1. Go to Receivables►Batch Payments to display a (blank) Batch Payment Setup record.

**IMPORTANT!**

The system automatically generates a batch number as soon as you begin a batch payment. It is a good idea to make note of this batch payment on the EOMB or other related document. You'll need to know this number if you should ever have to recall the information for this specific batch payment (e.g., if you are interrupted during the application of a batch payment, and have to abort the process only to return later to complete it - see "What To Do If You Are Interrupted During A Batch Payment" on page 5-85).

2. Select the appropriate payor (insurance company) from the "Payment from" drop down list.
3. Enter the total amount of the payment.
 - *You will apply the payment to various accounts later in this process.*
4. Enter the check number.
5. Enter the date of the payment.
 - *The current date will automatically appear in this field. However, if you need to change this date, you can simply overwrite it.*
6. Enter a note about the payment if appropriate (e.g., batch payment 21, the name of the payor, etc.).
 - *This note will appear next to the payment in the transaction so it is a good idea to include it here (see page 5-84 for an example).*

**NOTE**

The Batch Number will automatically be entered. It is recommended that you not change this number as this is how the system keeps track of each batch payment.

7. Select the Primary, Secondary, and Tertiary payment types.
 - *Generally, you will always select the corresponding payment type (see page 5-75 for more information about payment types).*

- You can also create your own payment types (see page 5-75).

Generally, you will select this if the payment is to be applied as primary payors.

OR

You will select this if the payment is to be applied as a secondary payor.

Payment Type	Description
Automated Write-off	System use only for Ins Allowed Adj
Cash	Credit to the Patient balance.
Check	Credit to the Patient balance.
Credit Card	Credit to the Patient balance.
Primary Payment	Credit to the Primary balance.
Secondary Payment	Credit to the Secondary balance.
Patient Deductible Payment	Credit to the Patient balance.
Patient Write-off	Credit to the Patient balance.
Primary Write-off	Credit to the Primary balance.
Secondary Write-off	Credit to the Secondary balance.
Patient Credit Adjust	Credit to the Patient balance.
Primary Credit Adjust	Credit to the Primary balance.
Secondary Credit Adjust	Credit to the Secondary balance.
Patient Debit Adjust	Debit to the Patient balance.
Primary Debit Adjust	Debit to the Primary balance.
Secondary Debit Adjust	Debit to the Secondary balance.
Refund Patient	Credit to the Patient balance.
Refund Primary	Credit to the Primary balance.
Deductible Not Met	Debit to the Patient balance.
<Search Completed>	

- Click Process to display the list of patients associated with the selected payor (e.g., if you chose MetLife, all patients with that insurance coverage will appear in the list).

This number (balance) will change (decrease) as you apply the payment to various patient accounts.

Each line in this list represents a separate transaction. Therefore, there may be one or more lines per patient.

Transaction	Date	Time	Patient Name	Amount	Type
A/R Open	09/26/2002	29	Priscilla Wagner	51.00	Primary
A/R Open	09/26/2002	30	Priscilla Wagner	225.00	Invoice
A/R WIP	10/22/2002	31	Priscilla Wagner	120.00	Invoice
A/R Open	12/28/2002	33	Thomas Washington	800.00	Primary
A/R WIP	12/28/2002	34	Ju Nguyen	6000.00	Invoice
A/R WIP	12/28/2002	35	Sandra Brown	3520.00	Invoice
<Search Completed>					

NOTE

Transactions for patients who are associated with the selected payor as a primary, secondary, or tertiary will be included in the list.

- Click on the name of the patient for whom you want to enter the first portion of the batch payment.

10. Click Make Payment to display the Batch Payment Item window for the selected patient.

Enter the total amount to be applied to this transaction.

Click and enter the amount to be applied for the specified line item.

Each line that appears in this window represents a service line in one specific transaction.

You can apply the current payment as needed to the items as specified in the EOMB.

#	Options	HCPC	Qty	Submitted	Allowed	Non-Allowed	Deductible	Paid	Tax
1	1/2	A4259	4	4000.00	4000.00	0.00			
1		A4265	1	500.00	500.00	0.00			
1		A4316	1	120.00	120.00	0.00			

Totals: 4620.00 4620.00 0.00 0.00 0.00 0.00

Process Cancel

11. Enter the total amount from the payment to be applied to this patient transaction.

IMPORTANT!

- Be aware that if you change the Non-Allowed amount, your receivable information may be adversely affected. Be sure that such a change is something you really need and want to do.
- If you do not enter a total payment, but do add specified amounts as mentioned in step 12, the system will give you the option of using the total of the individual line payments as the total (which will appear under the Payment tab in the associated patient transaction):

Confirmation

?

Total paid not entered but line payments are. Use the sum of line payments for the total payment amount ?

Yes No

12. Enter the specified amounts onto each line item as shown above.

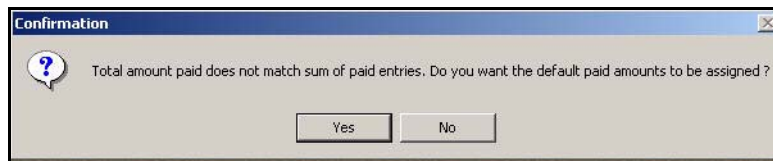

NOTE

- When you run the Payment Journal, this batch payment will be broken down by line item so you can see how much of the total payment was applied to which patient transaction, as well as to which service line in each transaction (i.e., line item details).
- Any payments entered into the Batch Payment screen as shown in step 10 above, will disappear from the batch payment screen once the payment has been processed, but will appear in the associated patient transaction(s) - see “The Appearance of Payments in Transaction Balances” on page 5-74 for more information.

IMPORTANT!

If you enter a total payment without designating a specific amount for each service line, a prompt will appear after you click on Process to ask if you want to have the system automatically break down and apply the total payment to the service lines. The system divide the total among any currently unpaid service lines The results of your answer here will appear in the related transaction(s).

13. Click Process to save the payment information for this transaction and display the next window.

**NOTE**

If the transaction has been under or over paid, the following window will appear to allow you to transfer any remaining balance.

This screen will also change according to the associated payment type (i.e., primary, secondary, etc.)

Select the appropriate option if you want to transfer the remaining balance, or select “Do Nothing” to leave the account information as is. Click OK to go to the next window.

- If you chose “Do Nothing” you will be returned to the patient transaction list (and repeat steps 9 through 13 for each patient account to which you want to apply the current payment).
- If you chose to transfer the balance, the transfer selection option will appear. You can then designate where you want to transfer the remaining balance (see page 5-75 for more information about payment types). In this way, you need to specify from where the balance is being transferred, as well as to where it should be transferred.

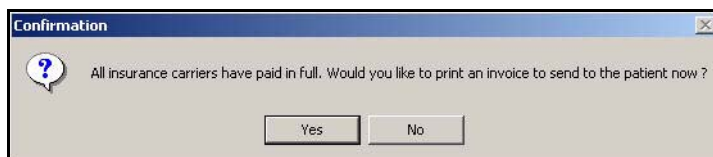

It is important that you select information for both of these fields. Please see **IMPORTANT!** note below.

Select the appropriate payment types and click OK to apply the remaining balance as designated.

**IMPORTANT!**

If you do not designate the transfer From and To information, a balance transfer will automatically be created with no payment type. This will create an error in the record.

Once all carriers have paid in full, the following window will appear:

14. Click Yes to print an invoice.

OR

Click No to return to the list of patients associated with the designated payor.

NOTE

If a single carrier has paid in full, and an associated claim needs to be passed on to another carrier, the following window will appear.

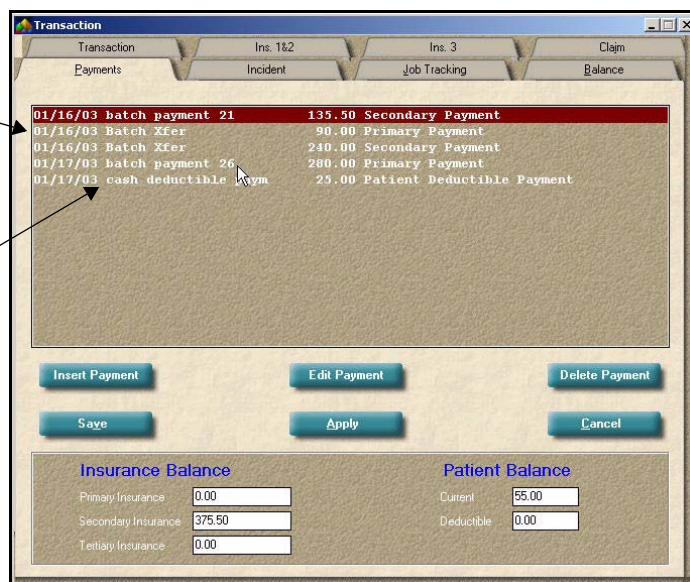

Select the appropriate option and click OK.

Once a batch payment has been applied to a patient transaction, it will appear in the transaction:

Batch payments and transfers will appear here.

NOTE

If other than a Batch Transfer, the description of the payment (e.g., in this example, Batch Payment 21, Batch Payment 26, and cash deductible payment) must be entered in the Payment Note of the Payment Setup (see step 6 on page 5-79).

What To Do If You Are Interrupted During A Batch Payment

It might well happen that you are in the middle of applying a batch payment and you are interrupted for a variety of reasons and need to come back to finish the batch payment at a later time and/or date. You can easily do this by following the procedure below.

1. Go to Receivables ► Batch Payments to display a (blank) Batch Payment Setup record.

2. Select the appropriate insurance company in the “Payment from” field.
3. You must be sure to select the payor (insurance company) that you originally designated for this batch payment (see step 2 on page 5-79).
4. Enter the batch number of the batch payment on which you want to continue working.
5. Click Process to display the list of payments who have balances for the designated payor.

A/R Open	Date	Batch #	Payor Name	Amount	Payment Type
A/R Open	09/26/2002	29	Priscilla Wagner	51.00	Primary
A/R Open	09/26/2002	30	Priscilla Wagner	225.00	Invoice
A/R WIP	10/22/2002	31	Priscilla Wagner	120.00	Invoice
A/R Open	12/28/2002	33	Thomas Washington	800.00	Primary
A/R WIP	12/28/2002	34	Ju Nguyen	6000.00	Invoice
A/R WIP	12/28/2002	35	Sandra Brown	3520.00	Invoice

6. Continue with steps 9 through 14 (pages 5-80 to 5-84) to complete the application of this batch payment.

Tracking Jobs

Job tracking is a featured offered in the Futura software that is perfect tool for monitoring your P & O company productivity, cash flow, delivery schedules, as well as determining and prioritizing workload. Job tracking can also be thought of as Time Tracking used for efficiency and effectiveness. The Job Tracking tool consists of two major functions:

- **Set up Job Types**

These determine and define any number of actions (steps) required in a particular job. Not only do you track the actions, but you can outline/estimate the time needed for each action.

- **Associate and Use Job Types for Tracking**

Once you have Job Types defined, you can begin using the Job Types for tracking various jobs for various patients. Once you associate the Job Type with a patient transaction, just as you can with other items used in a transaction (insurance company, diagnosis, etc.), you can add and change actions individually without making changes to the originally saved Job Type. In addition, you can record the actual time it takes for a particular action. In this way, you can monitor if jobs are meeting schedules, need forecast/time estimate adjustments, etc. You can add as many actions as needed.

Example:

You have several patients whom you are seeing for BK prosthetics. Because you want to make sure job costing remains effective and that the patient receives treatment and products on time, you create a job type called BK Prostheses Standard. This job type may consist of all the standard basic steps/actions required for the BK prosthetic patient treatment.

- Evaluation - 90 minutes
- Authorization - 7 days
- Casting - 2 hours
- Make Check Socket - 1 hour
- Test Fit - 45 minutes
- Central Fabrication - 14 days
- Final Fitting - 30 minutes

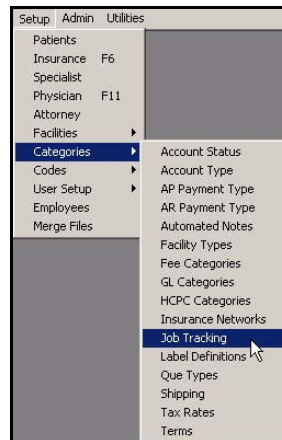

NOTE:

The information tracked by the above features, can be collected and organized into a variety of custom reports. Please contact Futura Technical Support for more information.

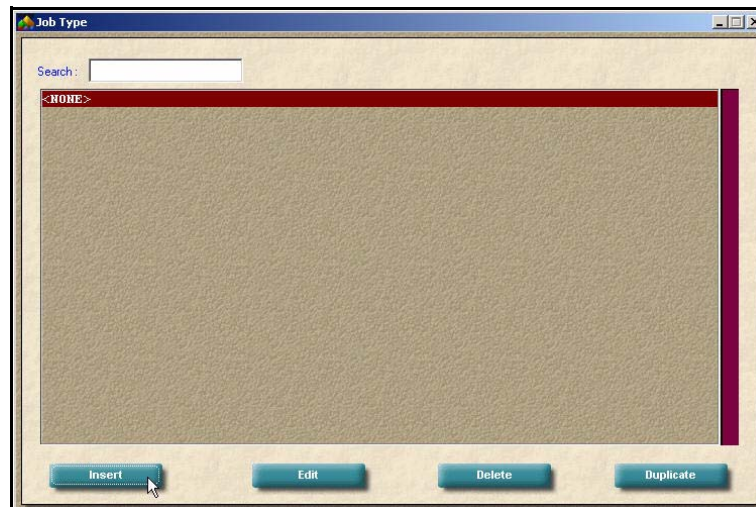

Setup Job Types

You will need to set up the specific job types that are appropriate for your company. You can set up as many job types as necessary. Once you have these stored in the system, you can associate them with patient transactions which then allows you to monitor time and productivity, etc.

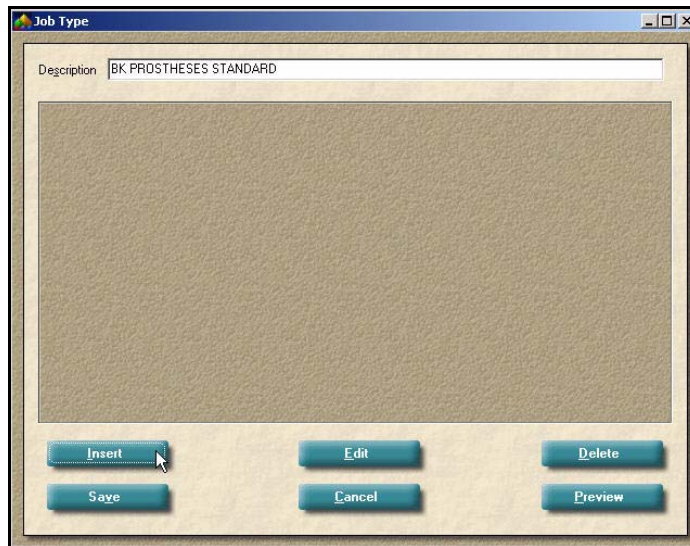

1. Go to Setup►Categories to display the Categories menu.

2. Select Job Tracking to display the Job Type list.
 - Until you create one or more Job Types, "<None>" will be the only item in the list as shown below.

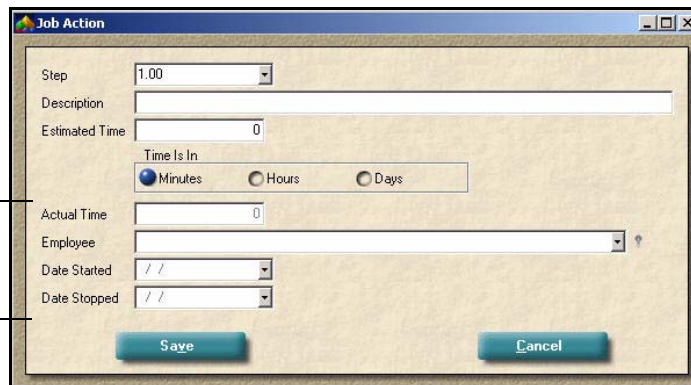

3. Click Insert to display the Job Type window.
 - This is where you will begin to create the job type and add actions.

The Job Type window is a standard Windows-style dialog box. It has a title bar with the text "Job Type" and standard window controls (minimize, maximize, close). The main area contains a text field labeled "Description" with the text "BK PROSTHESES STANDARD" entered. Below this is a large, empty rectangular area with a light brown, textured background. At the bottom of the window, there are six buttons arranged in two rows: "Insert", "Edit", and "Delete" in the top row; "Save", "Cancel", and "Preview" in the bottom row. A mouse cursor is pointing at the "Insert" button.

4. Enter a name for the current job.
5. Click Add/Insert to open the Job Actions window.

These fields are not editable until you associate the Job Type with a transaction (see page 5-90).

The Job Action window is a standard Windows-style dialog box. It has a title bar with the text "Job Action" and standard window controls. The main area contains several fields: "Step" (a dropdown menu showing "1.00"), "Description" (a text field), "Estimated Time" (a text field showing "0"), "Time Is In" (a group box containing three radio buttons: "Minutes" (selected), "Hours", and "Days"), "Actual Time" (a text field showing "0"), "Employee" (a dropdown menu), "Date Started" (a date picker showing "/ /"), and "Date Stopped" (a date picker showing "/ /"). At the bottom of the window, there are two buttons: "Save" and "Cancel". A line from the text block to the left points to the "Description", "Estimated Time", "Actual Time", "Employee", "Date Started", and "Date Stopped" fields.

6. Specify the step/action number you want to use.
 - This number designates the appropriate or desired sequence of the actions.

NOTE:

- While you can manually assign action numbers, the system will automatically assign a number. You can always change this number as needed.
- You can also add actions from the Transaction record (see page 5-95).

7. Enter a description for the action (e.g., Evaluation, Authorization, etc.).
8. Enter the number of minutes, hours, or days estimated or required for this action.
9. Select the appropriate increment of time (Minutes, Hours, Days).

NOTE:

The Actual Time, Employee, Start and Stop times cannot be used until this job type has been associated with a transaction (see page 5-90).

10. Click Save to store the action within the current Job Type and return to the Job Type window.
 - *Repeat steps 3 through 10 as shown above for every action in the current Job Type.*
11. Click Save to store the Job Type with the Job Actions you have added.

NOTE:

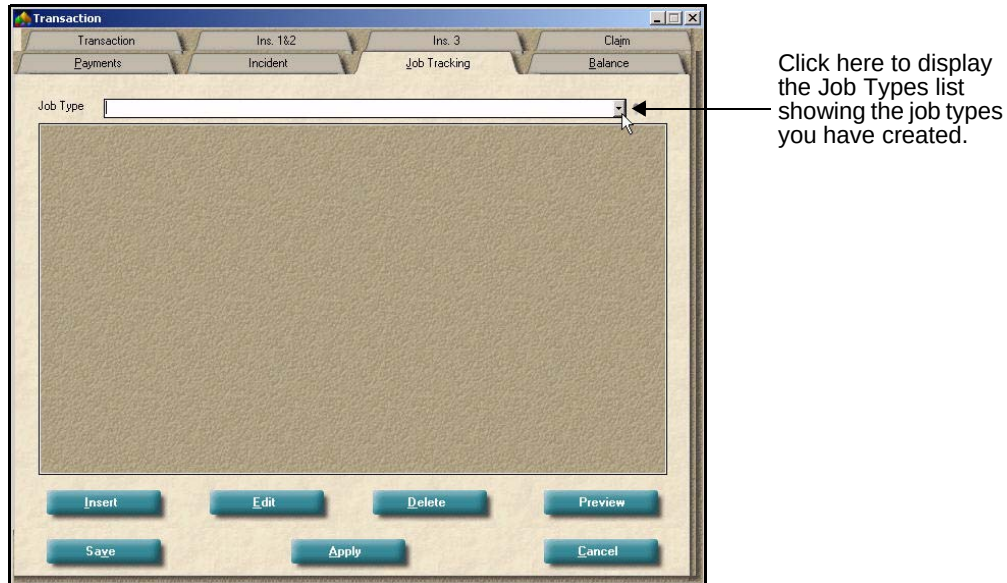

You can return to this Job Type and edit Job Actions as needed by using the Edit (button) function as you would with any other record.

Associate and Use Job Types for Tracking

Once you have created a job type (and included Job Actions), you can then associate it with a patient transaction. This is where you will see the tracking begin to take place.

From the Transaction record:

1. Click the Job Tracking tab to display the Job Tracking portion of the patient transaction.

2. Click  next to the Job Type field to display the Job Types list containing the job types you have already created.
 - Until you create one or more Job Types, "<None>" will be the only item in the list as shown below

3. Click on the Job Type you want to associate with this transaction.

4. Click Select to enter and display the selected job type in the transaction.

The Transaction window displays a list of job types and their durations. The 'Job Type' dropdown is set to 'BK PROSTHESES STANDARD'. The list shows the following actions and durations:

Action	Duration
Evaluation	90 minutes
Authorization	7 days
Casting	2 hours
Make Check Socket	1 hours
Test Fit	45 minutes
Central Fabrication	14 hours
Final Fitting	30 minutes

Buttons at the bottom: Insert, Edit, Delete, Preview, Save, Apply, Cancel.

**NOTE:**

You can view a graphical representation of the job actions by following the procedure on page 5-93.

**HINT:**

You can track/enter information for actions as they are completed. In addition, you can enter information for an action if it has begun, but not been completed. Just be sure that if you do this, you return to the job action and enter the appropriate information upon completion. If you do not, the action will remain shown as incomplete.

Remember that you can use this information in a custom report.

5. Select the action for which you want to enter actual times (e.g., if the evaluation has been completed, estimated to take 90 minutes, but in reality only took 75 minutes actual time).
6. Click Edit to open the Action window.

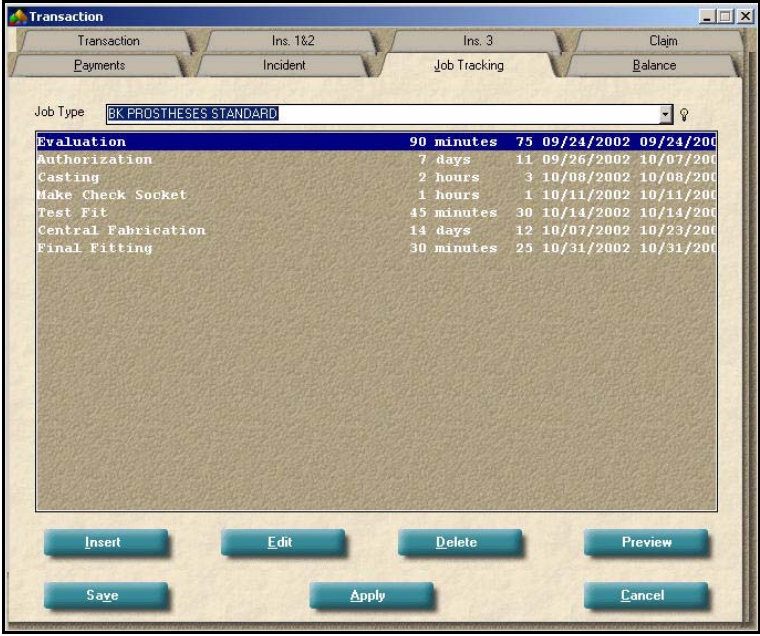

**SHORT CUT**

Press the Shift key to display the Job Action window for the selected action.

The Job Action window contains the following fields and controls:

- Step: 1.00 (dropdown)
- Description: Evaluation
- Estimated Time: 90
- Time Is In: ☒ Minutes ☐ Hours ☐ Days
- Actual Time: 0
- Employee: (dropdown)
- Date Started: / /
- Date Stopped: / /
- Buttons: Save, Cancel

7. Enter the actual time.
8. Click  next to the Employee field to display the list of employees.
9. Select the name of the appropriate employee (i.e., whoever was responsible for performing or recording the action).
10. Click Select to enter the selected name in the Employee field.
11. Select the date on which the action was started.
12. Select the date on which the action was completed.
13. Click Save to store and display the new information for the current action.

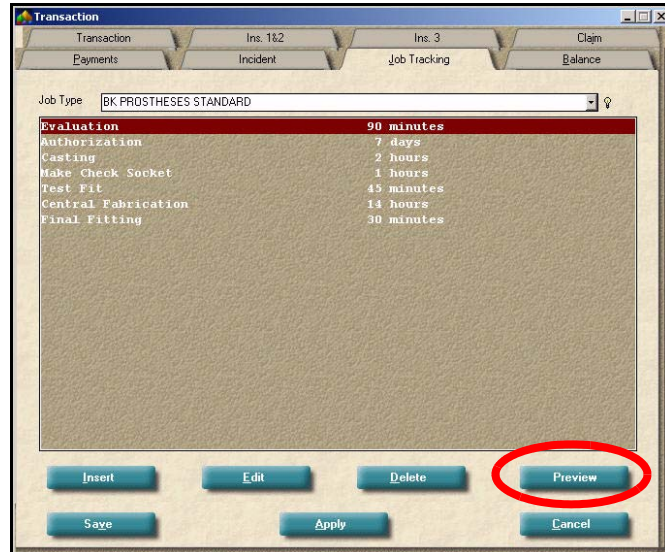

Job Type	Duration	Count	Start Date	End Date
Evaluation	90 minutes	75	09/24/2002	09/24/2002
Authorization	7 days	11	09/26/2002	10/07/2002
Casting	2 hours	3	10/08/2002	10/08/2002
Make Check Socket	1 hours	1	10/11/2002	10/11/2002
Test Fit	45 minutes	30	10/14/2002	10/14/2002
Central Fabrication	14 days	12	10/07/2002	10/23/2002
Final Fitting	30 minutes	25	10/31/2002	10/31/2002

Buttons: Insert, Edit, Delete, Preview, Save, Apply, Cancel

Preview Job Type Graphic

Once you create a job type, you can preview the estimated time schedule of the actions starting from the transaction date. The system will use the times you entered as estimates, and forecast the schedule according to those dates. In addition, once you enter any actual times, the preview and forecast will adjust accordingly (e.g., if you forecasted that the authorization would take 7 days, and instead it takes 11, the succeeding action forecasts will be automatically adjusted by 4 days).

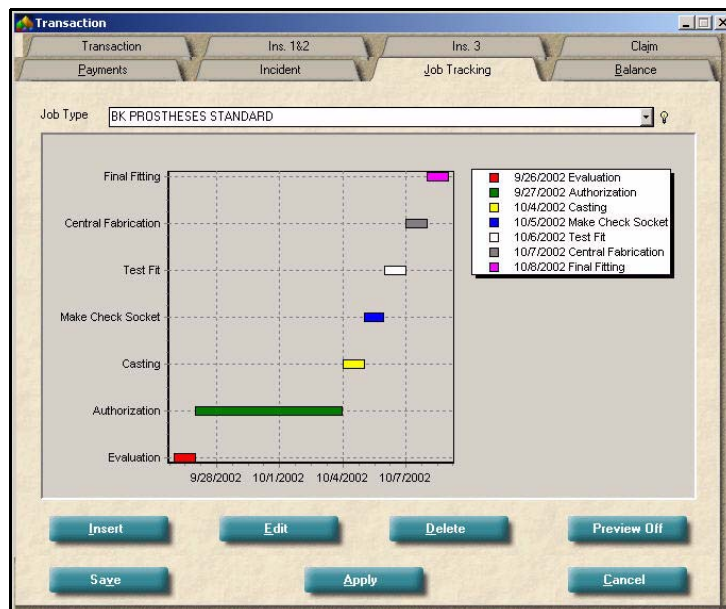

From the Job Tracking page of the Transaction record:

1. Click Preview to display a graphical representation of the current Job Type action forecast (estimates).

Example:

Estimated times shown.

Compare this image to the image on the next page which shows actual times. Note the adjustments made in the graphical image after actual times have been entered.

- Click Preview Off to close the graphical representation of the current Job Type action forecast and return to the Job Type window.

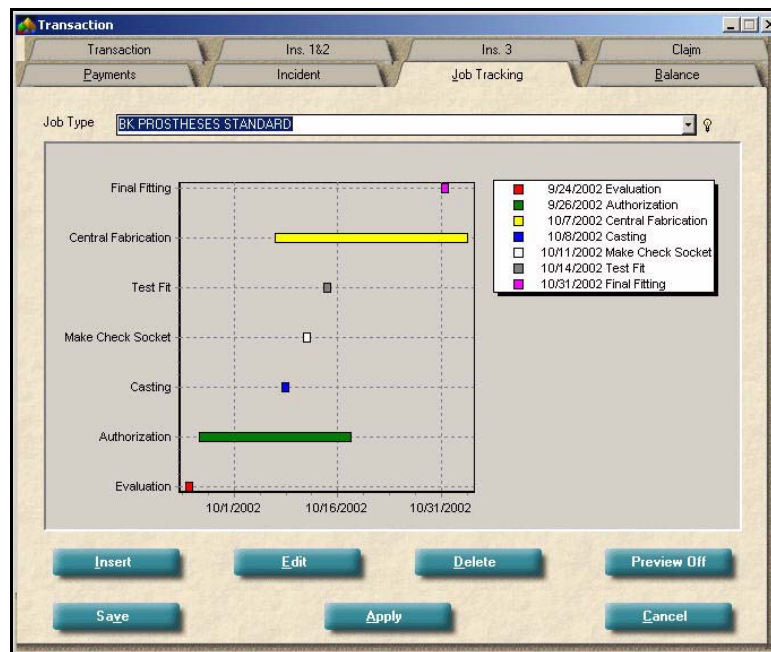

NOTE:

Once you have entered any actual times, you can use the Preview feature to view a graphical representation of them (e.g., if actual times are greater than the estimated times, any subsequent time estimates will be adjusted accordingly; the same is true if actual times are less than the estimated times).

Example:

Actual times shown.

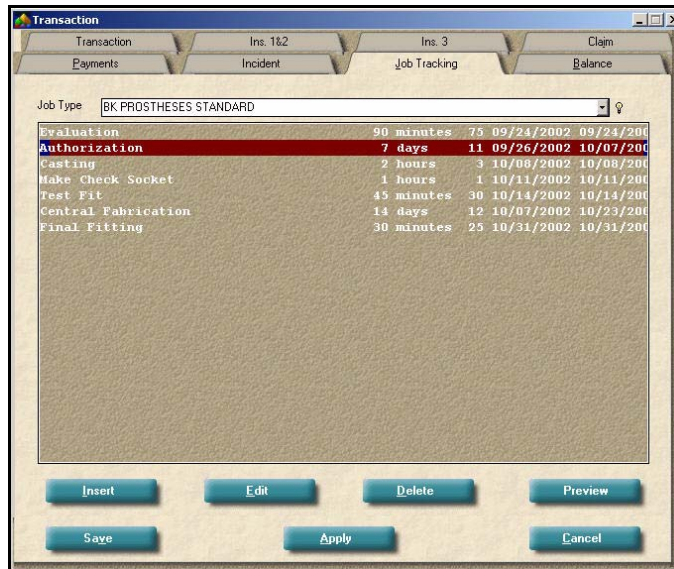

Compare this image to the image on the previous page which shows estimated times. Note the adjustments made in the graphical image after actual times have been entered.

Add an Action

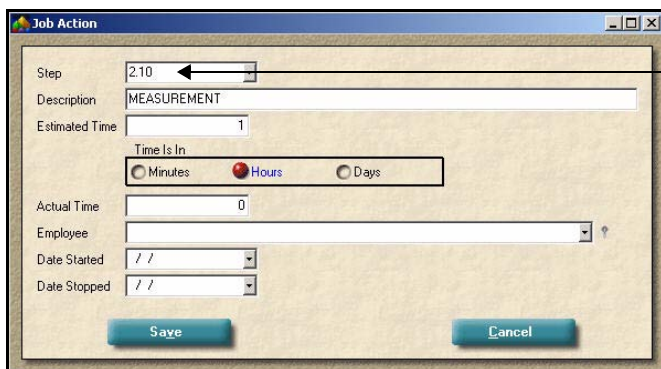

If you have a transaction that requires an action that is not included in the selected job type (e.g., an action not included in the standard BK Prosthesis job type), you can easily add one (or several) from the transaction itself. By adding the action in this way, you leave the original job type actions unchanged. This is ideal for unique, one-off, or one time changes to a job type.

From the Job Tracking page of the Transaction record:

1. Click on the existing action you want to have precede the action you want to add (e.g., to add a new action between Authorization and Casting, click on Authorization).

- Click on Insert to open a new Action window.

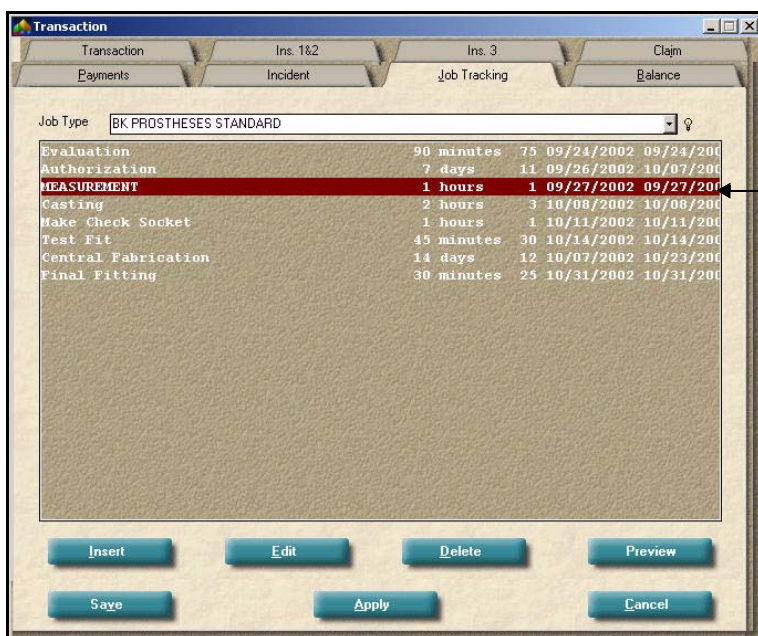

The 'Job Action' dialog box contains the following fields and controls:

- Step:** A numeric input field with the value '2.10' and a left-pointing arrow.
- Description:** A text input field containing 'MEASUREMENT'.
- Estimated Time:** A numeric input field with the value '1'.
- Time Is In:** A group box containing three radio buttons: 'Minutes' (unselected), 'Hours' (selected), and 'Days' (unselected).
- Actual Time:** A numeric input field with the value '0'.
- Employee:** A dropdown menu with a search icon.
- Date Started:** A date input field with slashes '//'.
- Date Stopped:** A date input field with slashes '//'.
- Buttons:** 'Save' and 'Cancel' buttons at the bottom.

Note that while you can manually assign action numbers, the new action will be automatically assigned a new number that will be an increment of the preceding action. In this example, the preceding action is listed as 2. Therefore, the new action will be 2.1. If you add another action after 2.1, the action will be numbered 2.2 and so on.

You can change this number manually as needed, but the placement in the list of actions will not be changed.

- Enter the information in the fields as shown on page 5-88.
- Click Save to store the new action and display it in the Job Type action list.

The 'Transaction' window displays a list of actions for 'BK PROSTHESES STANDARD'. The 'MEASUREMENT' action is highlighted in red. The list includes the following data:

Action	Time	Ins. 1&2	Ins. 3	Claim
Evaluation	90 minutes	75	09/24/2002	09/24/2002
Authorization	7 days	11	09/26/2002	10/07/2002
MEASUREMENT	1 hours	1	09/27/2002	09/27/2002
Casting	2 hours	3	10/08/2002	10/08/2002
Make Check Socket	1 hours	1	10/11/2002	10/11/2002
Test Fit	45 minutes	30	10/14/2002	10/14/2002
Central Fabrication	14 days	12	10/07/2002	10/23/2002
Final Fitting	30 minutes	25	10/31/2002	10/31/2002

At the bottom of the window are buttons: Insert, Edit, Delete, Preview, Save, Apply, and Cancel.

New action appears here.

Printing Invoices and Receipts

You can easily print out the current transaction as an invoice (for the patient or insurance) or in a receipt format.

Printing An Invoice For The Current Transaction

From the Transactions record (see page 5-54):

1. Click "Options" in the lower left corner of the Transaction record to display a list of options.

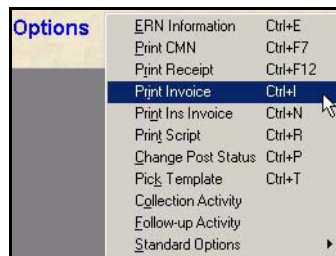

SHORT CUT

F10 opens the transaction Options menu

2. Select Print Invoice if you want to create an invoice for a patient.

OR

Select Print Ins Invoice to create an invoice for the patient's primary insurance.

OR

SHORT CUT

- You can use Ctrl + (the letter) I to open the Invoice window if you want to print a patient invoice.
- You can use Ctrl + N to open the Invoice window if you want to print an invoice for an insurance company.

- The corresponding invoice window will be displayed.

Example:

Example here shows Patient

When you select Print Insurance Invoice, this information will be automatically entered unless no insurance company information is associated.

This is also often used when billing hospitals.

Invoice

Provided To	Priscilla Wagner	Phone	(949) 555-5487
Address 1	54321 Dunbar Road	Work	
Address 2		Srv Date	07/26/2002
City	Diamond Bar		
State	CA	Zip	93456
Bill To	Priscilla Wagner	Phone	(949) 555-5487
Address 1	54321 Dunbar Road	Fax	(555) 555-5555
Address 2		Contact	
City	Diamond Bar

Note - Press F2 to select from Automated Notes

Inv # 6 09/08/2002

Buttons: Delete, Print, Cancel

If any invoices have been created prior to the current invoice, the date of the most recently printed invoice will appear here.

Creating Prescriptions (Scripts)

The process for creating a prescription is that you will need to create the prescription (enter the appropriate information), print out the script, then provide the printed page to the appropriate physician for his/her signature. Prescriptions are generally used when your company/location is providing an item to a patient that must have a signed approval from the referring physician. The prescription is actually the approval form that will be forwarded to, signed by, and returned from the referring physician.

Example:

A physician refers Sally Montez to your facility for a fitting for an AFO. Your specialist does an evaluation and decides what is actually needed. You would then create and print a prescription, send it to the referring physician for his/her signature. Once the physician signs and returns the prescription, you can provide the approved AFO to Sally.

IMPORTANT!

Be sure you have a service line to reflect this associated prescription.

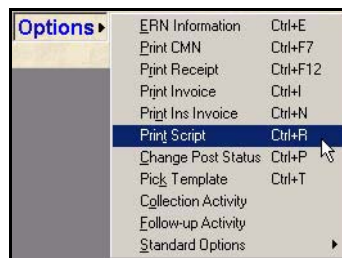

From the Transactions record (see page 5-54):

1. Click "Options" in the lower left corner of the Transaction record to display a list of options.

SHORT CUT

F10 opens the transaction Options menu

2. Select Print Prescription to display the Prescription window.
 - Since you are creating this prescription from an existing transaction, any of the existing information will appear in the related prescription fields (e.g., patient's name, patient's physician, etc.). Service line information will appear in the text box at the bottom of the script window.

3. Edit any information as necessary (including the information in the text box).
 - *For more information about the fields on this record, see page A-66.*
4. Click Save to store this prescription with the patient's information without printing immediately.
 - *You can always go back to the prescription and print it later.*

AND/OR

Click Print to display the script in the Notepad window.

ABC Company

Prescription Date: 07-31-02

Patient : Priscilla Wagner
54321 Dundar Road
Diamond Bar CA 92456

Start Date of Order : 07-26-02

Length of Need : 6 9 12 (months)

Diagnosis : 250.6 DIABETIC ANYTHOPHY

Prognosis : GOOD FAIR OTHER

Prescription for :
AN311 CATHETER WO BAG 2WAY LATEX

Medically Necessary

Sign Date: _____

Linda Hendbury

Phone : () -
Fax : () -
CITY :
07-26-02

- *If you click Print without saving first, you will be given the opportunity to save again upon closing the transaction window. Review the script for accuracy.*

**NOTE:**

You can make changes at this point directly into the Notepad version. However, once you make changes in this format, you will need to use the File ► Print option from within the Notepad function.

5. Click (in the upper right hand corner of the screen) to close the Notepad window.
 - *A confirmation message will appear to ask you if you want to print now or not.*

6. Click Yes to print the script on the designated printer.
 - *Another message will appear to remind you to load the printer with the appropriate invoice paper.*

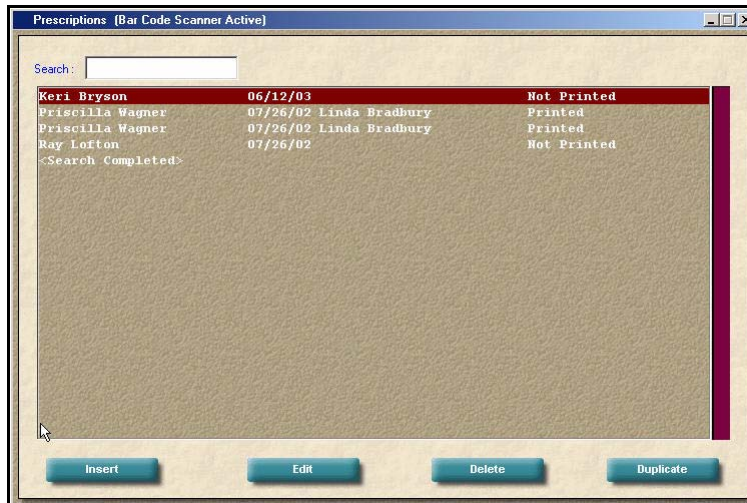

- *Once you have created and saved the prescription you can return to it at any time by way of the associated transaction or follow the procedure below to review prescriptions by patient.*

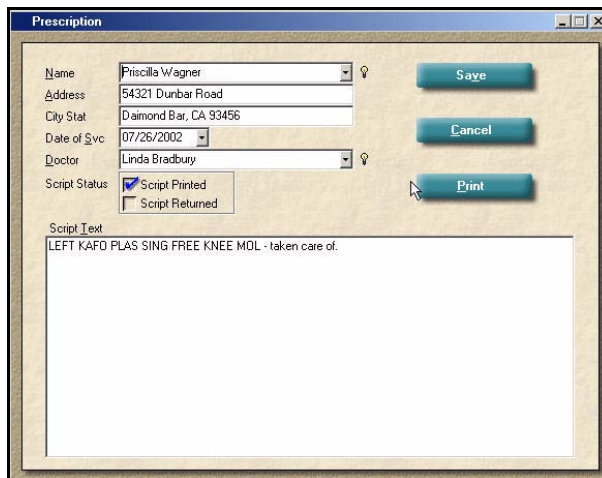

Viewing and Editing Existing Prescriptions

Once a prescription has been created through a transaction (see page 5-98), you can use the procedure below to view prescriptions by patient:

1. Go to Receivables►Prescriptions to display the Prescriptions list.

2. Select the patient for whom you want to view a prescription.
 - If there are two or more prescriptions listed for an individual patient, you will then need to look at the date of service listed for the prescription to decide which prescription you want to view.
 - In addition, the print status of the prescription will be noted (i.e., printed vs. not printed) for your reference.

3. Click Edit to display the selected prescription.

4. View the prescription.

AND/OR

5. Edit the information shown in the prescription.

- *For more information about the fields on this record, see page A-66.*

IMPORTANT!

Before editing the prescription, be aware of the consequences any changes may have elsewhere in the system, especially if the prescription has already been printed. Also, changing a date may impact the associated transaction and/or claim.

6. Click Save to store this prescription with the patient's information without printing immediately.

- *You can always go back to the prescription and print it later.*

AND/OR

7. Click Print to display the script in the Notepad window.

- *If you click Print without saving first, you will be given the opportunity to save again upon closing the transaction window. Review the script for accuracy.*
- *You can make changes at this point direction into the Notepad version.*

NOTE:

However, once you make changes in this format, you will need to use the File►Print option from within the Notepad function. However, using this print option for multiple page prescriptions may result in the prescription printing incorrectly as the printer settings originally made within the Futura software application will no longer apply for this printing.

8. Click  (in the upper right had corner of the screen) to close the Notepad window.

- *A confirmation message will appear to ask you if you want to print now or not.*

9. Click Yes to print the script on the designated printer.

- *Once you have created and saved the you can return to the prescription at any time by way of the associated transaction or follow the procedure below to review prescriptions by patient.*

NOTE:

You can have any form, including a prescription form, customized by Futura. You can even have special information and/or wording added. If you want to have a prescription customized, please print out the current prescription format, mark the changes you'd like to have made on the printout, then fax it to Futura Tech Support.

Picking Tickets (shipping slips)

Picking tickets are based on service line items entered in a transaction. They can be created to help with listing the items on an order that have been delivered or picked up by a patient. They are an excellent tool for maintaining inventory, but they can be used without such an affiliation. You can run picking tickets a day or two prior to a patient's appointment so that you can make sure you have all the items ready for pickup on that visit. Picking tickets can be run for a particular range of dates or for a specific transaction.

1. Go to Receivables►Picking Tickets to display a confirmation message asking if you want to print labels.

2. Click Yes if you want to print labels for the items.

OR

Click No if you do not want to print labels for the items.

- Another confirmation will appear to ask if you want to sort the picking tickets alphabetically.

3. Click Yes if you want the specified items alphabetized by patient name to display the Picking Tickets Run window.

OR

Click No if you do not want the specified items alphabetized to display the Picking Tickets Run window.

- In this case, if you select a series of items, they will be printed in order of dates.

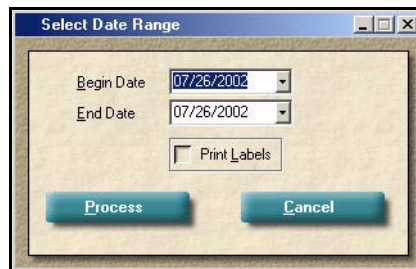

If you want to create a range of picking tickets:

The default setting on this window is to run all picking tickets. This setting allows you to print a range of picking tickets according to their date of the associated transaction. If you want to run this range of items, follow the steps below.

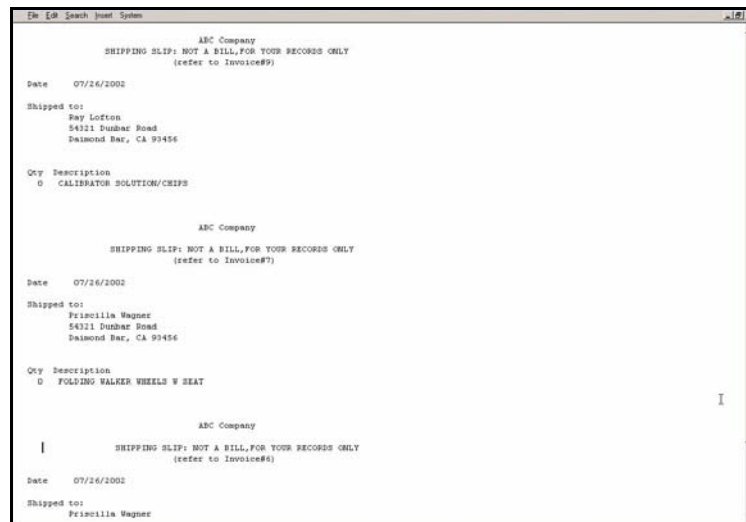

From the Picking Tickets window (see page 5-102):

1. Click Run to display a window that allows you to specify a range of dates.

2. Enter or select the dates between which you want to run picking ticket items.
3. Click Process to display the picking tickets in the Notepad format.

**NOTE:**

- You can edit the list from this point, but remember any changes will not be transferred to the associated transaction.
- Also, once you make changes in this format, you will need to use the File ► Print option from within the Notepad function. However, using this print option for multiple page picking tickets may result in the pages printing incorrectly as the printer settings originally made within the Futura software application will no longer apply for this printing.

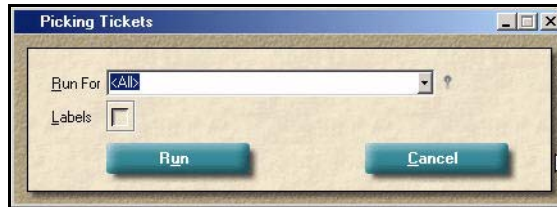

4. Click  (in the upper right hand corner of the screen) to close the Notepad window.
 - A confirmation message will appear to ask you if you want to print a list of supplies that were used.
5. Click Yes to print the list of items on the designated printer.

OR

If you want to create a picking ticket for a single transaction:

If you have a specific patient for whom you want to run a picking ticket, follow the procedure below.

From the Picking Tickets window (see page 5-102):

1. Click  next to the “For” field to display a list of pending transactions available for creation of picking tickets.

- If there are two or more transactions listed for an individual patient, you will then need to look at the date of service listed to decide which transaction you want to use for your picking list.
2. Select the transaction you want to use for this picking ticket.
 3. Click Select to place the associated patient’s name in the “For” field.
 4. Click Run to display the picking ticket for the specified patient in the Notepad format

NOTE:

- You can edit the list from this point, but remember any changes will not be transferred to the associated transaction.
- Also, once you make changes in this format, you will need to use the File►Print option from within the Notepad function.

5. Click  (in the upper right hand corner of the screen) to close the Notepad window.
 - A confirmation message will appear to ask you if you want to print a list of supplies that were used.
6. Click Yes to print the list of items on the designated printer.

Processing Claims

When all entries, updates and edits are complete for a transactions (most specifically the service lines - see page 5-60), you can then process/file the claim. Claims can be filed electronically or on paper. For the most part, the filing process is the same, only the “output” is different.

1. Select File to set the claim to be processed.

IMPORTANT:

Only select Refile if you have already filed the claim and it was rejected or was not processed completely the first time. If you simply want to print, or reprint, select No change and Print Immediately.

2. Click on Que to Batch to move the current claim into a list of claims to be filed at one time.
 - You may want to choose this option if you are short on time and prefer to quickly move the claim to the side for later processing.

OR

Click on Print Immediately to print the form on the corresponding claim form for mailing.

- You can choose Do not Print if you want to wait until later to print and/or this is an electronic claim.

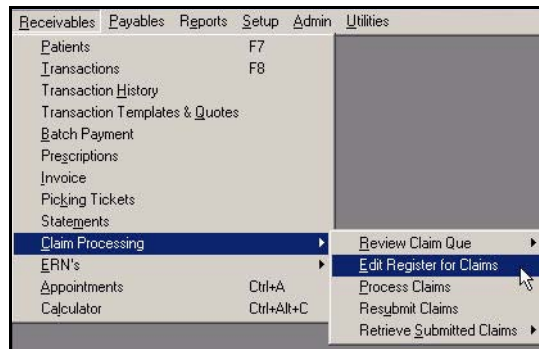

NOTE:

- Claim forms are set up for each insurance company during the insurance setup process (see page 4-13). Since many insurance carriers have their own special forms, you can have Futura customize your forms to accommodate the insurance carriers as needed. Please contact Futura Technical Support for more information.
- You have the option of printing paper claims in addition to processing them electronically.
- Once you file a claim, any payments or balances on the associated transaction may appear differently than they did prior to the processing of the claim. Please review the information on payments on pages 5-71 through 5-74.

Once You Have Placed Claims In The Queue For Batch (Edit Register)

Once you have completed a claim and added to the queue for batch, it's recommended that you check the queued claims for any errors. Futura software allows you to do this virtually automatically.

1. Go to Go to Receivables►Claims Processing► Edit Register for Claims to display the list of currently queued claim forms.
 - *The claims you have queued are grouped by the forms on which they will be printed or electronically filed.*
2. Click on the form name that you want to confirm is ready to process.
3. Click Select to display any errors or other information that will prevent the selected claim form from processing appropriately.
4. Return to the claim to correct any specified errors and/or make other necessary changes.

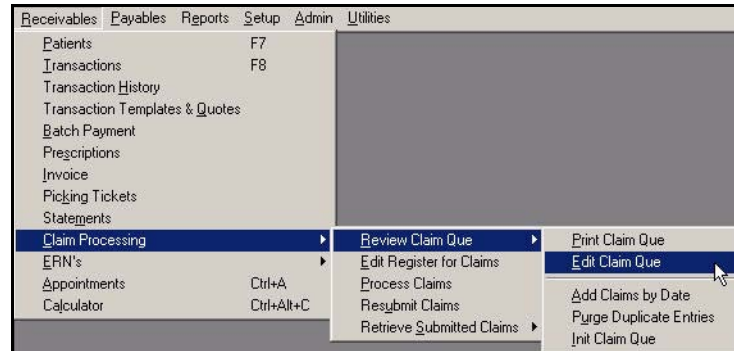

IMPORTANT

Repeat steps 1 to 4 until all claims are reviewed without error.

Edit the Queue

You can add, delete, and edit claims currently in the queue:

1. Go to Receivables►Claims Processing►Review Claim Que to display the submenu.

2. Select Edit Claim Que to display the list of currently queued claim forms.
 - *The claims you have queued are grouped by the forms on which they will be printed or electronically filed.*
3. Click on the claim form you want to edit or delete.
4. Click Edit to open the selected claim form.
 - *You can change the form information as needed and click Save.*
 - *Repeat steps 1 to 4 until you have completed all changes to forms/claims as needed.*

OR

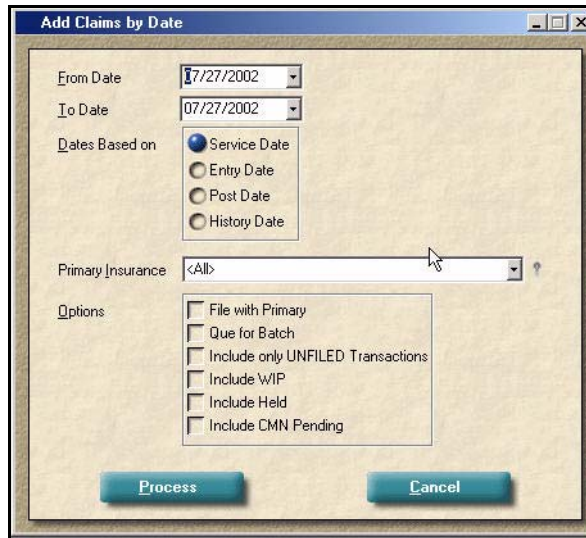

Click Delete to delete the selected form.

- *Repeat steps 1 to 4 until you have deleted all forms/claims as needed.*

Add Claims To The Queue By Date

To add claims into the queue by service, Entry or Post dates, you need to make sure the queue is empty (using the Edit Que option see page 5-107). Processing or removing existing claims from the queue before adding new claims by service date, will ensure that the queue is organized and processed according to the selected dates only.

1. Go to Receivables►Claims Processing►Review Claim Que to display the submenu.
2. Select Add Claims by Date to display the Add Claims by Date window.

3. Select or enter a range of dates for which you want to add claims to the queue.
4. Select whether you want to use service, Entry or Post dates.
5. Select an insurance company if you want to specify claims for this date range for a specific insurance company.
 - Otherwise, leave the primary insurance set at the default "All".
6. Select any additional options you want to apply during the processing of the specified claims
7. Click Process to add the specified claims to the queue.

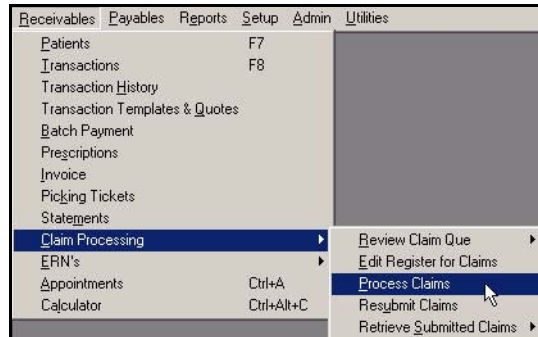

NOTE:

Remember to use the Edit Register function to make sure all of the currently queued claims will be processed accurately (see page 5-106).

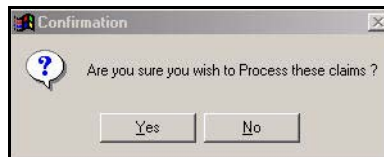

The Final Step in Processing Claims:

When you have completed and set a claim (or claims) to be filed, then edited the claims for any errors, and/or edited the queue as needed, you are ready for the final step which is the actual processing of the claim. If you are processing paper claims, you can complete and print the processing here if you haven't already done so. If you are processing electronic claims, this is the final part of the procedure you'll need to complete.

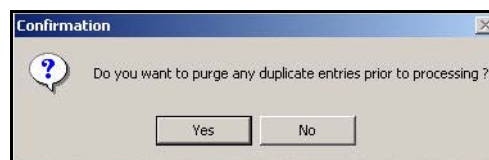

1. Go to Receivables►Claims Processing►Process claims to display the submenu.

2. Select Process Claims to display the list of currently queued claim forms.
The claims you have queued are grouped by the forms on which they will be printed or electronically filed.
3. Select the form for which you want to process claims.
4. Click Select to display a confirmation message asking you to confirm that you want to process this claim (or claims).

5. Click Yes to process the selected claim form and the associated claims in the queue.
 - If any duplicate claims exist, a message will appear to ask if you want to remove them.

6. Click Yes if you want to delete the duplicates.
 - A message will appear to let you know how many, if any, duplicates were deleted. Click OK to display the next message/option.
 - Another message will appear to ask if you want to run a Batch Report prior to processing claims.
7. Click Yes to display the Batch Report.

8. Click to close the Batch Report.
 - *Once the Batch Report has closed, you will have the option to print the report.*

- *It is recommended that you print the batch report so that you can compare it to any confirmation reports that you receive for any electronic claims. See Appendix C: "From Futura: Day 1" on page B-1.*
9. Click Yes to print the report and display the next option.

If you are submitting claims electronically:

A message will appear at this point to prompt you to specify the region to which you are submitting claims (i.e., Region A, B, C, or D). Once you have done this, the WinEngine window will appear. Click Send Claims to start the electronic submission process.

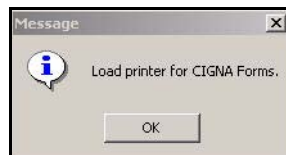

- See "Once the Claims Have Been Submitted via Envoy, Medicare, or EMC Carrier" on page 5-112 for more information on what to do next.

OR

If you are printing claims:

If you choose to print the report, a message will appear to prompt you to load the printer with the Batch Report form.

10. Click No to display the next option.
 - *A message will appear to prompt you to load the printer with the appropriate claim forms.*

11. Load the forms as prompted.
12. Click OK to begin printing the designated claims.
 - *Once the first claim has printed, a window will appear to offer you additional options:*

13. Check the first printed claim to make sure the placement of the type on the form is correct.
 - *Make any adjustments as necessary and go to the next step.*
14. Click Reprint Current if you want to print the current claim again.

OR

Print Next to print the next claim only.

OR

Print Continuous Print if you want to begin printing all the claims in the queue without stopping until all have been printed.

NOTE

- Once printing of claims has been completed, an option will appear to allow you to print labels for the claims you just printed. If you click Yes, the list of available labels will be displayed. Select the label you want to use, and click OK. A message will then appear to prompt you to load the designated labels in the printer. Load the labels and click OK.
- While printing of labels this way is virtually automatic and very easy, you may want to consider using window envelopes to mail any paper claims you process. This is because when you print labels, a label will be printed for each claim. However, it may be that many of the claims go to the same address (all to one payor, etc.). If this is the case, it is unlikely that you will want to create a label for every claim. By using window envelopes, you can simply print the claims and those that are to be submitted to a single address into one envelope.

15. Print Labels for mailing paper claims as described above.

Once the Claims Have Been Submitted via Envoy, Medicare, or EMC Carrier

Once the claims have been processed as described in the previous section, there are a few more steps you need to make sure that your claims have processed correctly.

1. Retrieve the confirmation report(s) from Envoy.
 - See Appendix C: "From Medicare/Envoy/EMC Carrier: Day 2+" on page B-2.
 - These reports will be available 24 hours after submission. However, they MAY be available the same day the submission is made, it depends on where in the Envoy batch cycle the claims were processed. However, no matter when you submitted the claims, they will be available no later than 24 hours later.
2. Compare the confirmation report you printed in step 6 in the previous section to the confirmation report to verify which claims you sent have been accepted or rejected.
3. Continue to retrieve the confirmation reports until all claims from the Batch Report (see step 6 in the previous section) appear on the confirmation reports OR until 5 days have passed.

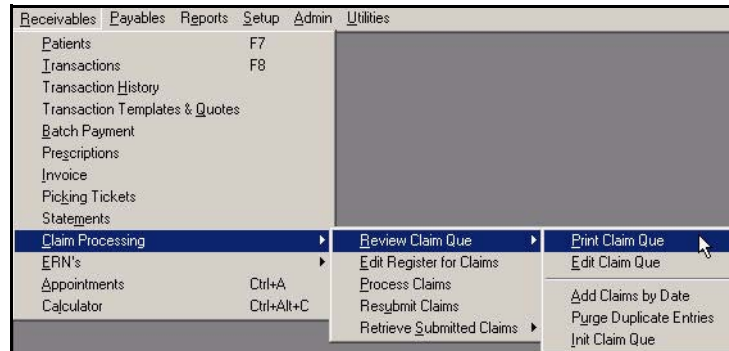

IMPORTANT

Remember that if the reports mentioned above will not be created if a claim or a batch claim has been rejected by Envoy, Medicare, or EMC Carrier.

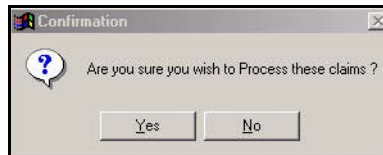

Print Claim Que

If you want to print a list of what claims are being filed using what forms, follow the steps below:

1. Go to Receivables►Claims Processing►Review Claim Queue to display the submenu.

2. Select Print Queue to display the list of currently queued claim forms.
 - The claims you have queued are grouped by the forms on which they will be printed or electronically filed.
3. Select the form for which you want to print a list of associated claims.
 - The claims themselves will not be printed; only a summarized list of what claims will be processed in association with the selected form.
4. Click Select to display a confirmation message asking you to confirm that you want to process this claim (i.e., in this case printing).

5. Click Yes to display a list of associated claims for the selected form in the Notepad format.
 - If you select No, you will be returned to the Form Types list.
6. Click  (in the upper right had corner of the screen) to close the Notepad window.

OR

Press Esc to close the Notepad window.

 - A confirmation message will appear to ask you if you want to print a the list.
7. Click Yes to print the designated list of claims currently in the queue.
 - If you select No, you will be returned to the Form Types list.
 - Repeat steps 1 to 7 until you have printed the lists for all forms/claims in the queue as needed.

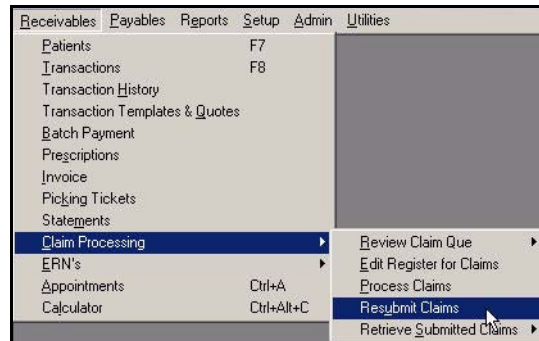

Resubmit Claims

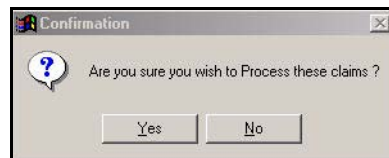

IMPORTANT

You should only use this feature IF and WHEN a claim or set of claims has not successfully been processed or transmitted originally. If you simply want to reprint a claim, go to the Transaction►Claims tab, select “No Change” and “Print Immediately”.

1. Go to Receivables►Claims Processing to display the submenu.

2. Select Resubmit Claims to display the list of currently queued claim forms.
The claims you have queued are grouped by the forms on which they will be printed or electronically filed.
3. Select the form for which you want to resubmit claims.
4. Click Select to display a confirmation message asking you to confirm that you want to process this claim (or claims).

5. Click Yes to process the selected claim form and the associated claims in the queue.
 - If you select No, you will be returned to the Form Types list.
 - Repeat steps 1 to 5 until you have resubmitted all forms/claims as needed.

NOTE:

- If you select the Print Immediately option, you will be prompted to confirm that you want to print (and load the appropriate forms in the printer).
- If you are processing electronic claims, the claims will be processed accordingly as per the settings made for you by Futura International, Inc.
- Once you file a claim, any payments or balances on the associated transaction may appear differently than they did prior to the processing of the claim. Please review the information on payments on pages 5-71 through 5-74.

Performing Daily Close Procedures

It is very important for your record keeping and upkeep of the system to perform the daily close and backup functions every day. However, since the process is so simple, you should be able to get through it quicker than you might think. The overall process consists of the following procedures:

- **Daily Close with Automatic Report Generation**
- **System Backup**

Close Process

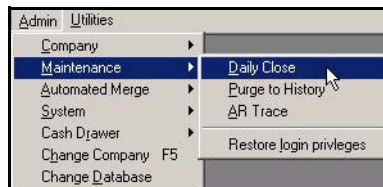

The Daily Close posts the day's date to all open items. In addition, keep in mind that only transactions with a status of "Open" will be included in the Daily Close (see page 5-64).

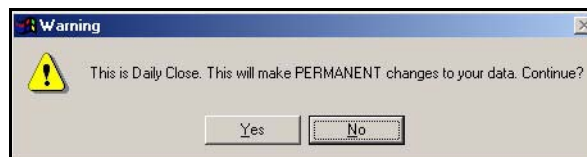

NOTE:

- You can run the daily close as many times as you need to during the day. By performing several closes throughout the day, posted statuses are applied to transactions preventing any alterations to transactions regardless of security rights.
- If any insufficient inventory (see page 8-1) is detected by the system, the daily close cannot be completed.

1. Go to Admin►Maintenance to display the submenu.

2. Select Daily Close to display a warning message asking if you are sure you want to proceed with the closing (as permanent changes will be made to your data)
 - *If you click No, the daily close process will stop immediately.*

3. Click Yes to continue and display another message asking you if you want to generate reports.

4. Click Yes to automatically run the Summary Journal and Payment Sheet reports and display the setup menu.
 - *If you click No, you can always run these reports at a later time using the Futura reports menu.*

NOTE:

- Information in the Summary Journal includes the names of patients with associated transactions for the day, the day's total UC fees, the day's Allowed fees, and the difference between the UC and Allowed fees.
- The Payment Sheet report includes any payments collected and entered into the system for the day (both individual payments and batch payments), the employee that entered the payment(s), the type of payment (i.e., cash, credit, insurance, etc.), total income and write offs, as well as credit vs. debit payments.

5. Enter or select the date you want to use as the close/post date for the reports.

NOTE:

You may set the date to a previous date (e.g., for month-end close activities). However, any transactions and payments in the system dated later than the date selected here will NOT be included in the close (i.e., will not be posted).

6. Click Process Post to complete the daily close and print reports (see step 4 above)
 - *A confirmation message will appear when this process is complete.*
 - *Depending upon the number of transactions and payments, this process may occur very quickly or take several seconds to a few minutes to complete).*

7. Click OK to close the confirmation message.
 - *You can now exit from the Futura system and run your daily backup. Please see "Backing Up the Data in the System" on page 5-117 for more information.*

Backing Up the Data in the System

By making sure you do a daily system back up, you are protecting all of the data and daily activities in the system. Backing up the system makes sure that all of your data is safe and up-to-date in case of an electronic or system failure (e.g., due to loss of power) which can sometimes result in loss of information. Because of the way the Backup Utility is installed with the Futura Software, the process is essentially automatic.

**HINT:**

Be sure to review the next section about restoring files as that shows how these backup files can come in handy (see page 5-121).

**IMPORTANT!**

- Because the daily backup protects all of your hard work and information contained in the system, it is vitally important that you perform this procedure at the end of EVERY DAY!
- You must have supervisory/administrative rights in order to run this backup procedure.

1. Log out of the Futura application (see page 4-2).

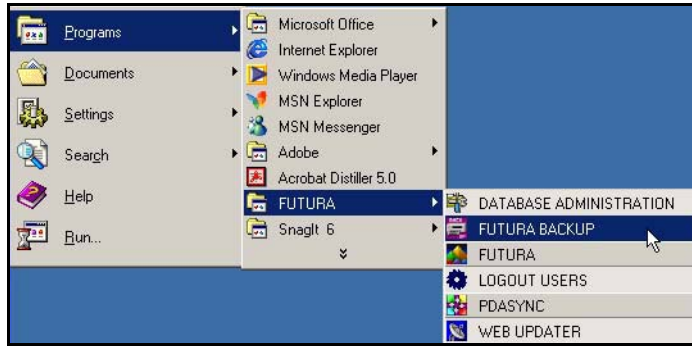

**IMPORTANT!**

The backup cannot be run when anyone is logged into the system. Therefore, you must make sure you and anyone else in your company is properly logged out of the Futura application.

2. Click the  button at the bottom left corner of your computer screen to display the Start menu.

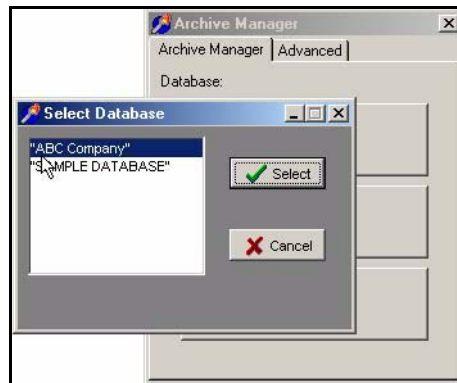

3. Go to Programs►Futura to display a list of utilities for the Futura application.

IMPORTANT!

Steps 4 and 5 as shown below are only applicable if you have more than one database associated with your Futura system. If you only have one database, you will be directly prompted for your login information (see step 6 below).

4. Select Backup to display the Select Database window.

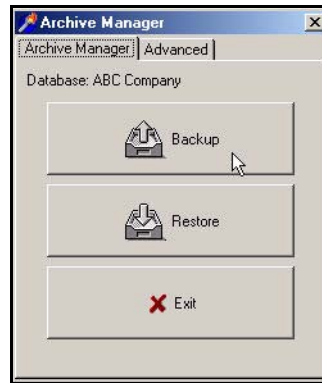

5. Select the database you want to back up.
 - You can repeat this process for every database you want to save.
6. Click Select to display the login window.

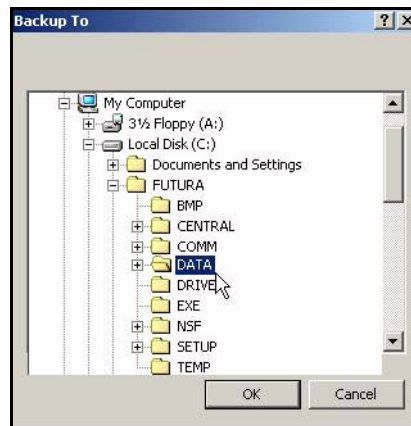

IMPORTANT!

You must have supervisory/administrative rights in order to run this backup procedure.

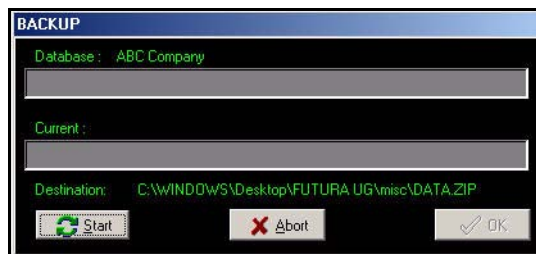

7. Log in as usual (see page 4-1) to display the Archive Manager window.

8. Click Backup to display the Backup To window.

9. Locate the folder or location where you want to store the backed up information.
 - This may be a folder on the computer, a network drive, floppy or zip disk or CD.
10. Click OK to display the Backup status window.

11. Click Start to begin the backup of the data to the chosen location.

- The status window will change as the backup continues to show you how the backup is progressing.
 - A message will appear to let you know when the process is complete.
12. Click OK to close the Backup Utility.
 - Repeat steps 2 through 12 for each database you need to back up.

Restoring Backed Up Files

The restoration of files can be a major benefit of doing a daily back up. The backup allows you to save and store information upon a daily basis. In this way, if something happens to your data for any reason, although you may lose SOME information, you can still save the majority of your work.

Example:

On August 15th, you do a daily close and daily backup. You have seen 12 patients that day. In addition, you spent a good amount of time posting payments, processed a number of claims, etc. It was a busy day to say the least. Which means that you have completed several transactions that have taken you several hours to finish.

Then, on August 16th, you see 3 patients just before a lightening strike hits the transformer outside your building which knocks out the electricity in your building. This means that any unsaved information could be lost. In addition, for this example, let say when electricity comes back on, you find that all of your data is lost or damaged.

Since you hadn't done a back up for the day yet, you will probably lose the transactions you completed for the 3 patients you saw on the 16th. However, through the restoration tool, you can "rescue" all previously backed up information (e.g., all of the transactions you input the day before). In a case like this (even though it isn't likely to happen), the ability to restore your data can be a business saver.

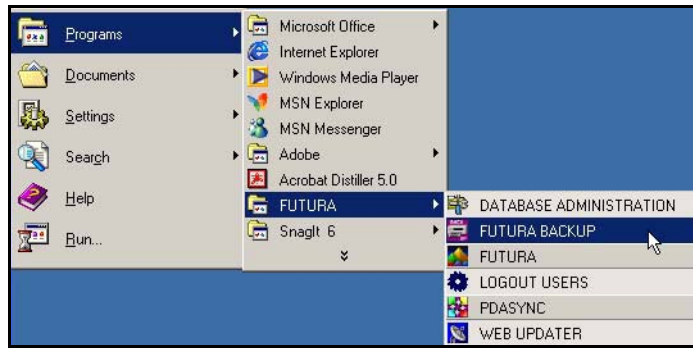

IMPORTANT!

- You must have supervisory/administrative rights in order to run this restore procedure.
- The restoration cannot be performed when anyone is logged into the system. Therefore, you must make sure you and anyone else in your company is properly logged out of the Futura application.

1. Log out of the Futura application (see page 4-2).
2. Click the  button at the bottom left corner of your computer screen to display the Start menu.

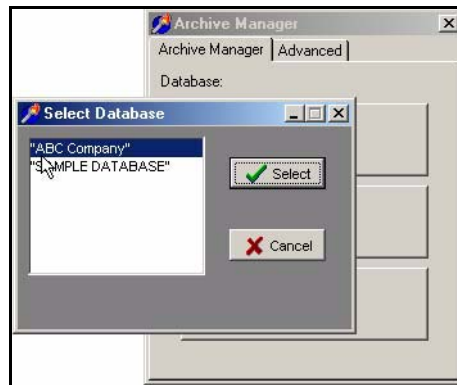

3. Go to Programs►Futura to display a list of utilities for the Futura application.

IMPORTANT!

Steps 4 and 5 as shown below are only applicable if you have more than one database associated with your Futura system. If you only have one database, you will be directly prompted for your login information (see step 6 below).

4. Select Backup to display the Select Database window.

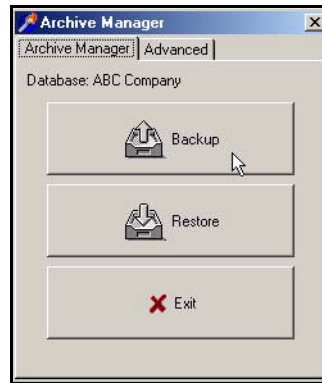

5. Select the database you want to restore (from the last backup).
 - You can repeat this process for every database you want to restore.
6. Click Select to display the login window.

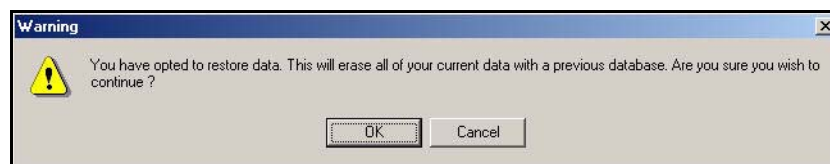

IMPORTANT!

You must have supervisory/administrative rights in order to run this restore procedure.

7. Log in as usual (see page 4-1) to display the Archive Manager window.

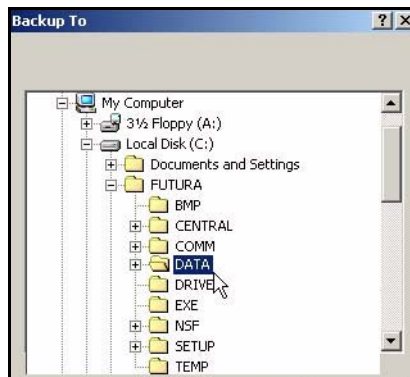

8. Click Restore to display a message asking if you are sure you want to restore the selected database.

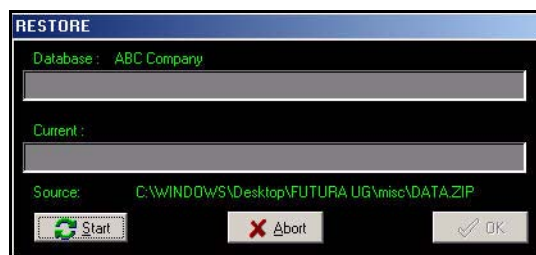

IMPORTANT!

When you restore a database from backed up data, it will replace anything you currently have in the system. Using the example on the previous page, if you restore information backed up on the 15th, anything that you entered on the 16th will be erased and replaced by the previous day's data.

9. Click OK to continue and display the Restore From window.

10. Locate the destination where you have the backed up data you want to restore.
11. Click OK to display the Restore status window.

12. Click Start to begin the restoration of the data to the chosen location.

- The status window will change as the restoration continues to show you how the it is progressing.
 - A message will appear to let you know when the process is complete.
13. Click OK to close the Restore utility.
- Repeat steps 2 through 13 for each database you need to back up.

Creating and Using Templates (and Quotes)

A template can be thought of as a basic transaction containing a set of information that is used repeatedly. Futura templates are designed to use when you have patient's that return again and again for the same services or when you have an order for a patient that gets the same refill time and time again. By setting up a template for such a patient, you prevent having to enter the information over and over again for each new service or re-order. This, in turn, makes the repeated transaction more accurate and much faster to complete. A Futura template can simply be considered a transaction with a set of pre-defined information that can be used as a starting point for repeated use without requiring you to recreate it for each use.

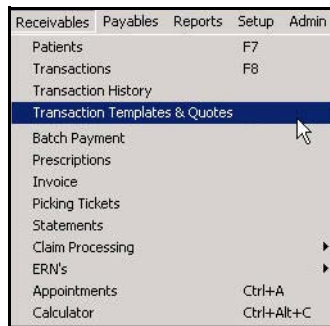

In addition, since you can create and use a template without actually entering a transaction into the patient's history/chart, you can use the template tool to create quotes for patients and insurance companies to provide estimates for supply costs.

Example:

Mrs. Wagner is an BK amputee patient with a prosthesis. She will therefore need to continually re-order stump socks. You may first want create a template as a quote to provide her and her insurance company with an estimate of what those will cost. This will allow her to find out how many of the socks the insurance company will or won't cover as well as what it will cost her to provide any that the insurance company won't. In addition, once she decides that she will be ordering the socks through your business, you can use the quote as a template for future orders. In this way, you won't have to repeatedly enter the order and you will also be sure that what you order is exactly what you provided the quote for.

Create a Template

From the Receivables menu:

1. Select Transaction Templates & Quotes to display the Copy Transaction list.
 - Until you create one or more Templates/Quotes, "<None>" will be the only item in the list as shown below.

2. Click Insert to open a new (blank) transaction record.
 - *This is what you will use as the basis of your template or quote.*
3. Select the appropriate patient's name from the patient list.
4. Create the template as you would any other transaction (see page 5-54).

NOTE:

You only need to enter the information for the Transaction tab. All other tabs in the Transaction Template are inaccessible as they are not applicable to templates or quotes.

The screenshot shows the 'Template' window with the 'Transaction' tab selected. The form contains the following fields and values:

- Company: (AS YOU WERE) ABC Company
- Name: Priscilla Wagner
- Address: 54321 Dunbar Road
- City Stat: Diamond Bar, CA 93456
- Spclty: Harvey Villa
- Referral: Linda Bradbury
- Location: Los Angeles General Hospital
- Invoice #: T5
- Serv. Date: 09/30/2002
- Entry Date: 09/30/2002
- Post Date: / /
- Hist. Date: / /
- Accept Assignment: ☒
- Discount: 0

The table below the fields contains the following data:

Srv From	Qty	HCPC	Mod1	Mod2	Mod3	Mod4	Pnt	Fee	Total
09/30/02	5	05	Mod1	Mod2	Mod3	Mod4	1	68.25	341.25

At the bottom of the window, the following buttons are visible: Edit, Insert, Delete, Duplicate, Change Svc Date, MultiCode, Apply, Save, and Cancel. There is also an 'Options' section with a 'Template' button.

5. Click Save to store the template for later use.

Use a Template to Print a Quote

Once you create a template that you want to also use as a quote, you can easily print it out to send to a patient or insurance company.

From the template you created (see page 5-125):

1. Click on Options in the lower left corner of the transaction record to display a list of options.

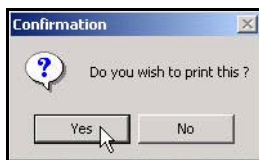

2. Select Print Quote to display the quote in the Notepad format.

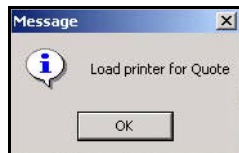

NOTE:

You can make changes at this point direction into the Notepad version. However, once you make changes in this format, you will need to use the File►Print option from within the Notepad function. However, using this print option for multiple page prescriptions may result in the prescription printing incorrectly as the printer settings originally made within the Futura software application will no longer apply for this printing.

- Click  (in the upper right had corner of the screen) to close the Notepad window.
 - A confirmation message will appear to ask you if you want to print now or not.

- Click Yes to display another print prompt asking you to load the printer (with the appropriate quote paper).
 - This is in case you have special letterhead or other special paper on which you like to print your quotes.

NOTE:

You can have any form, including a quote form, customized by Futura. You can even have special information and/or wording added. If you want to have a quote format customized, please print out the current format, mark the changes you'd like to have made on the printout, then fax it to Futura Tech Support.

- Click OK to print the quote.

Use a Template to Open a New Transaction

Once you have created a template, you can then use it for repeated patient orders or services.

- Go to Receivables►Transactions to display the Transactions list.

2. Click Add/Insert to open a new (blank) transaction record.

NOTE:

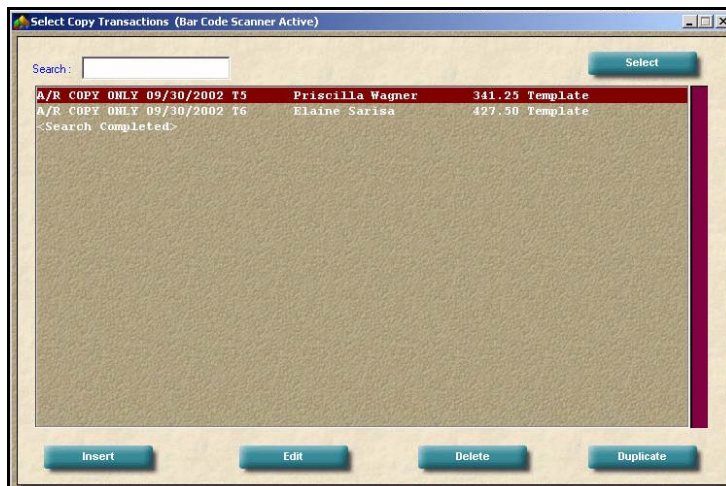

If the “Prompt for Status” setting has been enabled in your User Rights (found by going to: Company►User Rights►Transaction Controls), you will be prompted to select a status for this transaction BEFORE you create it.

- Remember that once the transaction is created, regardless of the status, you can use the “Change Post Status” option found in the Transactions “Options” list (see page 5-64).

- If this setting has not been made, then the new (blank) Transaction record will appear.

3. Click on Options in the lower left corner of the transaction record to display a list of options.

4. Select Pick Templates to display a list of existing templates.

5. Select the appropriate template (according the patient name).
6. Click Select to open that template as a new transaction.
 - *All of the information stored in the template will be carried over into the new transaction. In addition, other patient information (e.g., insurance, payment, and balance information) will be carried over from the patient record. You can edit this information as you would in any other transaction (see page 5-54).*

Printing a CMN

Futura allows you to easily print a particular CMN (Certificate of Medical Necessity) for any patient record that contains one.

IMPORTANT!

Because of the way the system allows you to print styles of CMNs, it is recommended that you use MedPass form 031L for general claims, and CMN484 for oxygen. Please contact Futura Tech Support for more information.

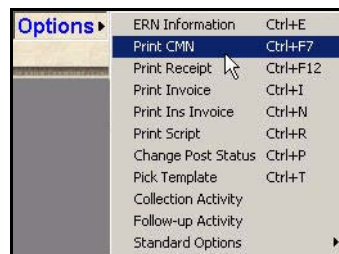

From the Transaction record (see page 5-54) of the patient for whom you want to print the CMN:

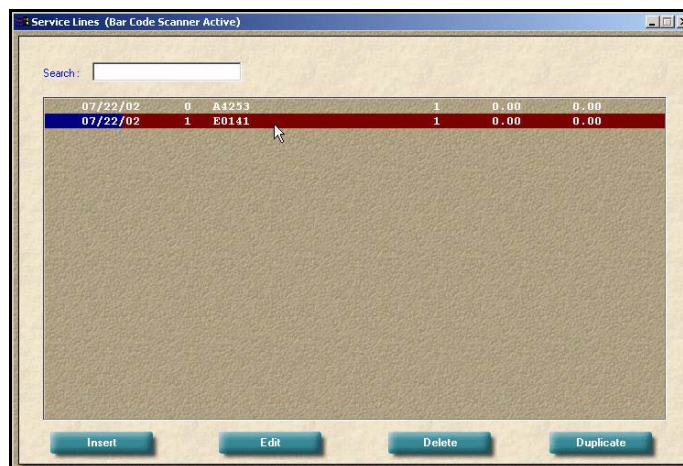

NOTE:

Be sure that the Transaction you choose contains a service line with at least one defined CMN (see pages 5-60 and A-87).

1. Click on Options in the lower left corner of the transaction record to display a list of options.

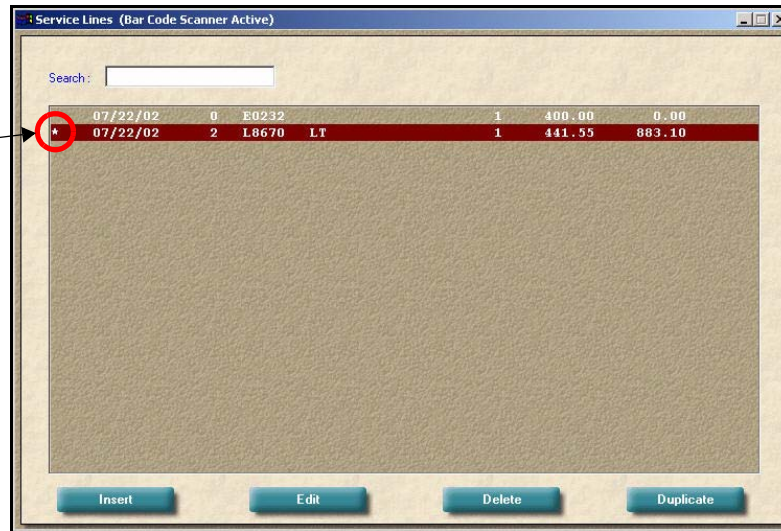

2. Select Print CMN to display the Service Lines list for this transaction.

3. Click on the service line that contains the CMN you want to print.

4. Press the asterisk key (*) on your number keypad to designate the selected service line (see **IMPORTANT** note and illustration below).
 - An asterisk will appear next to the selected service line to designate it for printing.

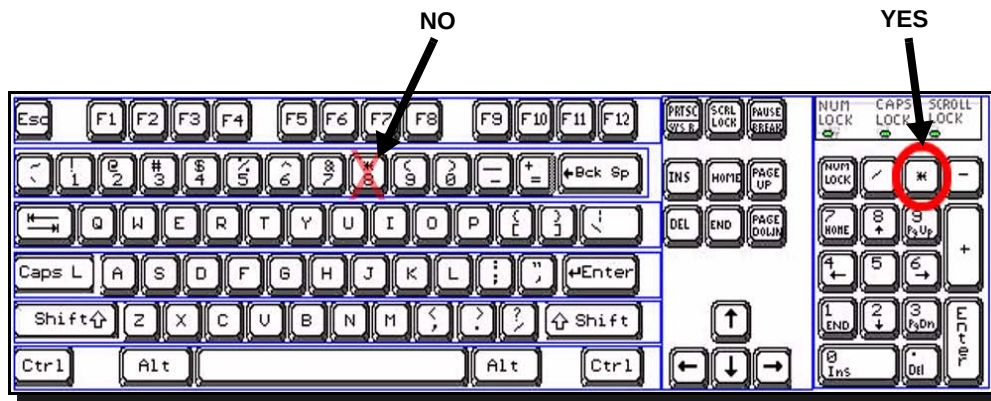

The selected service line will be designated with an asterisk

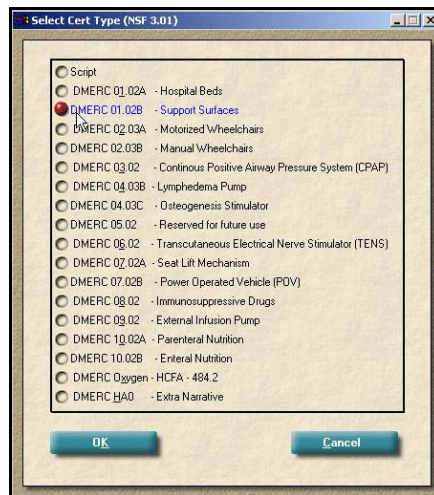

IMPORTANT!

You **MUST** use the asterisk key on the number keypad portion of your keypad. The asterisk that appears above the 8 key on the alphanumeric portion of your keyboard will not work for this function. See illustration below.

ON YOUR KEYBOARD...

5. Click  in the upper right corner of the window to close the Service Line list and display the Select Cert Type list.

6. Select the certification type (DMERC) for the CMN you want to print for this service line.

NOTE:

If more than one CMN is associated with this service line, only the one that corresponds to the Certificate Type (DMERC code) you have selected above will print out. If you want to print them both, you will need to repeat this steps 1 through 5 as shown above, then select another Certificate Type (DMERC code) that corresponds to one you want to print.

7. Click OK to print the corresponding CMN and display the Reprint window.
- The designated CMN will be printed and the Reprint window will appear so that you can reprint as needed. Each time you reprint the CMN the Reprint will reappear until to you click Done to complete the printing process.*

8. Click Done to complete the printing process.

Document Collection and Follow-up Activities

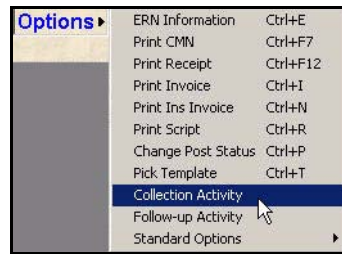

You can keep general and/or detailed notes about any collection (for payment) and follow-up (non-payment related issues such as patient care).

Documenting Collection Activities

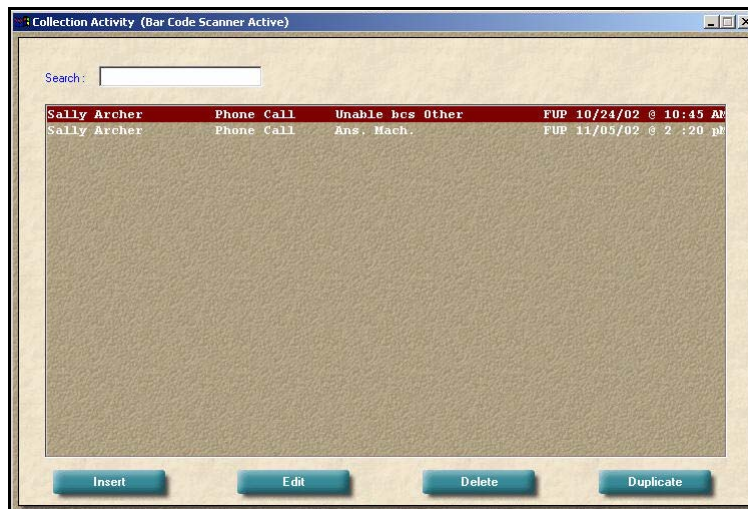

If and when you need to contact a patient or an insurance provider, or other payment source, you can record the activity and related information in the Futura software.

From the Transaction record (see page 5-54) related to the payment in question:

1. Click on Options in the lower left corner of the transaction record to display a list of options.

2. Select Collection Activity to display the list of collection activities for this transaction.

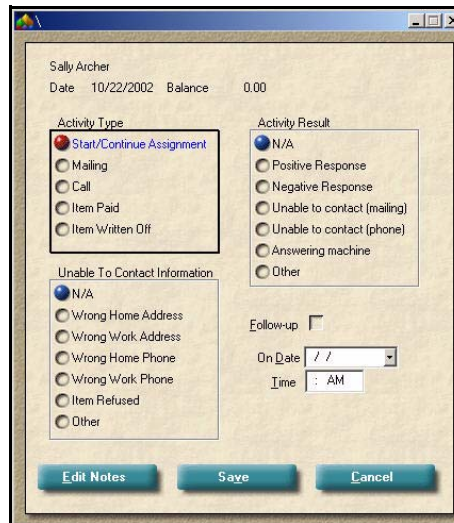

- Until you create one or more activities, nothing will appear in the list.

3. Click Insert to open the employee list.

4. Select your name (or the name of the employee performing the activity).
5. Click Select to display the collection activity window.

6. Select the appropriate Activity Type.
7. Select the Activity Result.

NOTE:

If the result was that you were unable to make contact, you can specify the reason in the Unable to Contact Information list.

8. Select the Follow-up option if follow up is required.
9. Enter the date and time.
10. Click Edit Notes to open the Notepad feature if you want to include details about the activity (e.g., left message to ask patient to call us about current insurance information).
11. Go to File►Save in the Notepad to save the notes you have entered.
12. Click Save to store the collection activity for this transaction.

Documenting Follow-up Activities

If and when you need to make a call on the patient's behalf (other than for collection purposes), you can record those activities within the Futura software (e.g., find out why supplies have not been delivered for this patient, make sure patient has followed special care instructions, etc.).

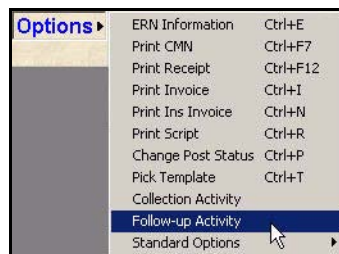

NOTE:

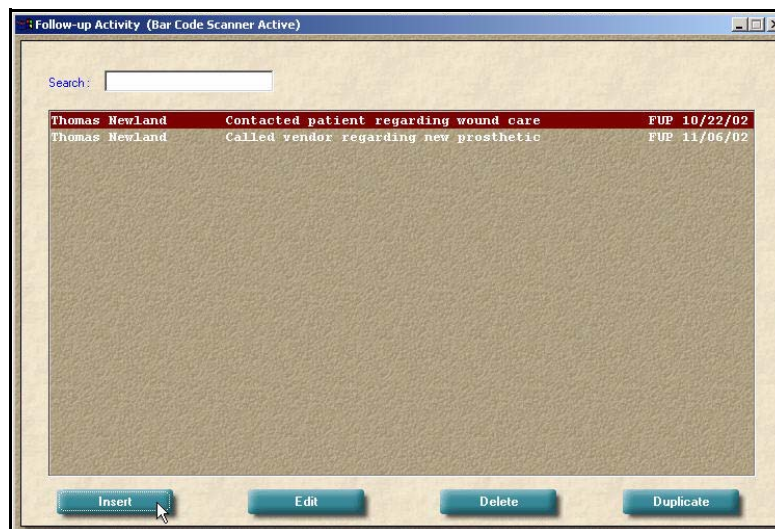

You can easily review a listing of these activities by using the Follow-up Activities report (see page 7-37).

From the Transaction record (see page 5-54) related to the issue in question:

1. Click on Options in the lower left corner of the transaction record to display a list of options.

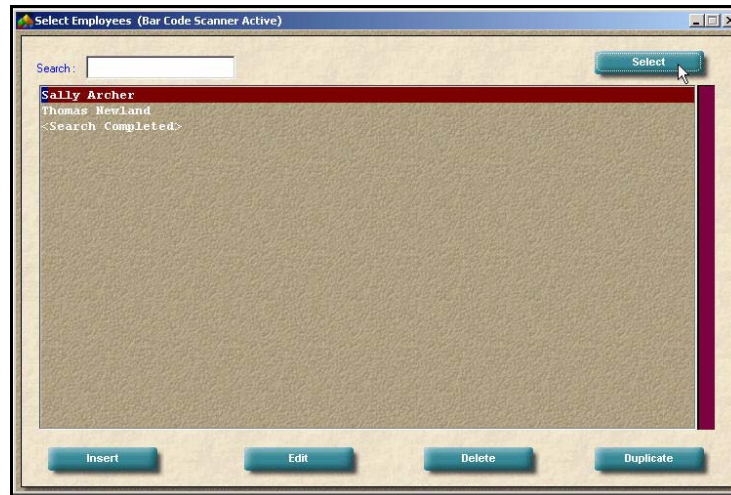

2. Select Follow-up Activity to display the list of follow-up activities for this transaction.

- Until you create one or more activities, nothing will appear in the list.

- Click Insert to open the employee list.

- Select your name (or the name of the employee performing the activity).
- Click Select to display the Follow-up Activity window.

- Enter the reason for the follow-up activity.
- Select the Follow-up option if further follow up is required.
- Enter the date and time.
- Click Save to store the follow-up activity for this transaction.

SECTION 6

DME TASKS

What You'll Find In this Section:

Page 6-1 ■ Renting Durable Medical
Equipment

NOTES:

Renting Durable Medical Equipment

In addition to all of the features described throughout this guide, Futura software provides a set of special tools to help you DME business run smoothly and nearly effortlessly. Among these tools is the Rental Pages function.

Use Rental Pages

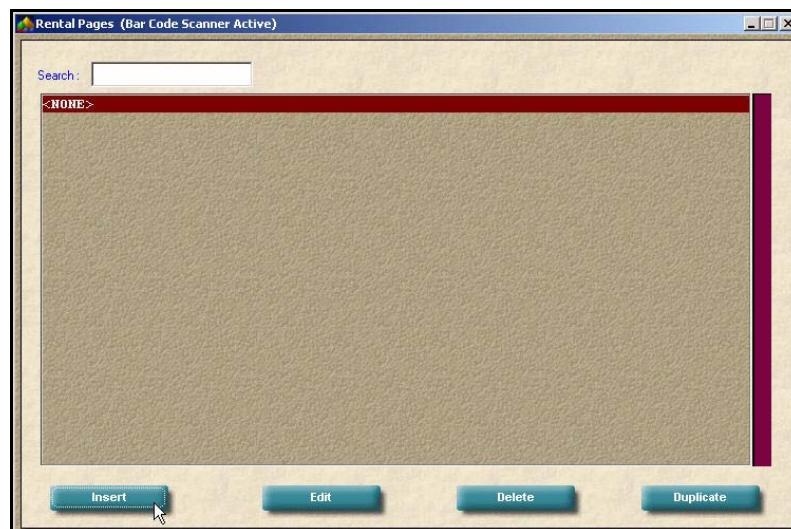

Rental Pages are similar to Transactions (see page 5-54), but instead of recording service information, they allow you to easily enter and track all durable medical equipment rental transactions. In addition, rentals can be quickly converted to sales transactions with a few clicks of the mouse. This features automatically keep track of billing cycles and uses insurance information, diagnoses, etc., to process the rental transactions for each patient/client.

NOTE:

You can also designate rental pages to be standard or capped rentals (see page 6-5). The standard rental option can be used for rentals that are not capped, as well as recurring rentals and purchases (e.g., supplies). Capped rentals can be applied to Medicare billing as appropriate.

1. Go to Receivables►Rental Pages to display the Rental Pages list.
 - Until you create one or more Billing Tables, "<None>" will be the only item in the list as shown below.

2. Click Add/Insert to display the Rental Page record.

3. Enter the information as appropriate for the following tabs:

- Please see “Rental Pages Record” on page A-67 for more information about the fields on this record.

SHORTCUT:

If you want to immediately begin entering rental items (rental lines), press Alt + F to display the HCPC code list.

Refer to page 6-4 for more information about rental lines.

Rental Page

This is the main page of the rental pages feature. You will need to enter all of the basic information for a specific patient. If the patient’s information is already in the system, you will only need to select the patient name from the list, and all stored information will automatically appear in the corresponding fields of the Rental page.

IMPORTANT!

- If you are creating a rental page for an existing patient, then you need to use the Name drop down menu to select the patient. If no existing patient name is selected from the patient list, then this rental page will default to a “walk-in” (1 time only) rental page and will not be associated with the existing patient’s permanent record.
- If you have set up modifiers on an account type set up for this patient, the modifier information will autofill in this rental page.
- If you have set up the fee schedule on the selected HCPC codes and within the patient’s insurance information, the price will autofill from there for this rental page.
- Before you can select a Billing Table, you will need to create one or more. See pages 6-4 and for more information about Billing Tables and how to create them.
- It is a good idea to confirm that an existing information that is automatically carried over from the patient record is appropriate for the current rental page (e.g., at some time, you may need to change the diagnosis code and/or specialist from one rental to another for a particular patient). The majority of the information that automatically appears from the patient record can be changed per rental page without affecting the permanent patient record.

Insurance 1 - 2 tab

Contains all primary and secondary insurance information needed for billing. If this information is already associated with a patient for whom you are creating a rental page, the information will automatically appear in the corresponding fields.

HINT

Part of the convenience of Futura software is that you can change insurance carriers per rental page. This means that for each rental page you create for a patient, you can change the insurance carrier (without changing the insurance information stored in the patient record. This is very useful for one-off situations.

Example:

Fernando Curochio is a Medicare patient. However, his recent hospitalization means that your services need to be billed to the hospital and not the patient's insurance. Futura allows you to quickly and easily change the carrier on the rental page for this bill only (to the hospital instead of Medicare). This one time change will be stored in the rental page you create, but will not affect the patient's permanent record.

Insurance 3 tab

Contains any information available on a 3rd (tertiary) insurance source if there is one. If this information is already associated with a patient for whom you are creating a rental page, the information will automatically appear in the corresponding fields. Please refer to the HINT shown above.

Incident

the Incident tab is only used if/when the patient's DME rental is related to an accident of some sort vs. a systemic problem (i.e., car accident vs. diabetic related amputation). You can record cause, date, and ability to work. You can also associate any additional documentation and special program information. You can also record authorization numbers here.

NOTE:

Use the Release Now button on the rental page to release all available bills for the current rental.

Create a Billing Table

Rental types define the way payments and bills are to be handled for this rental page.

From the main Rental Page record window (see page 6-1):

The screenshot shows the 'Rental Page' window with various fields for company, patient, and rental details. Annotations include:

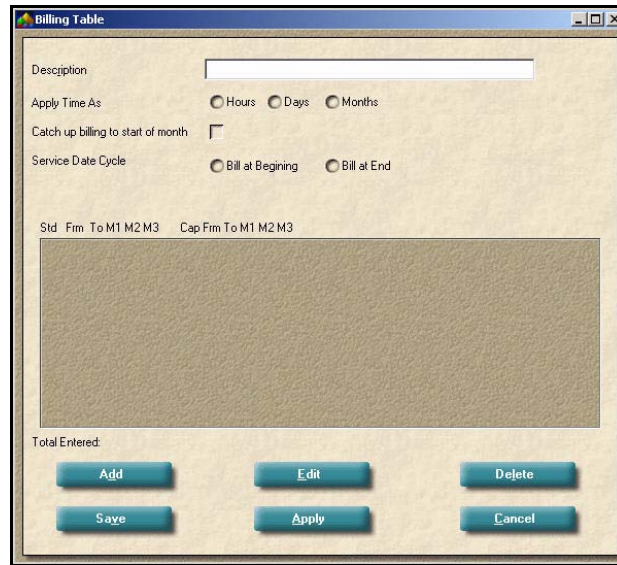

- An arrow pointing to the 'Bill Table' dropdown menu with the text: "Click here to display the Billing Table list."
- An arrow pointing to the 'Item Out' and 'Bill From' date fields with the text: "These dates are all significant as they are used when formulating various reports."

The window includes fields for Company, Name, Address, City/State, Specialist, Referral, Location, and Bill Table. It also has date pickers for Item Out and Bill From, and a section for diagnosis codes (Diag 1-4). At the bottom, there are summary fields (SubTotal, Tax, Discount, Total) and action buttons (Edit, Insert, Delete, Duplicate, Release Now, Apply, Save, Cancel).

- Click  next to the Bill Table field to display the Select Billing Table list containing the Billing Tables you have already created.
 - Until you create one or more Billing Tables, "<None>" will be the only item in the list as shown below.

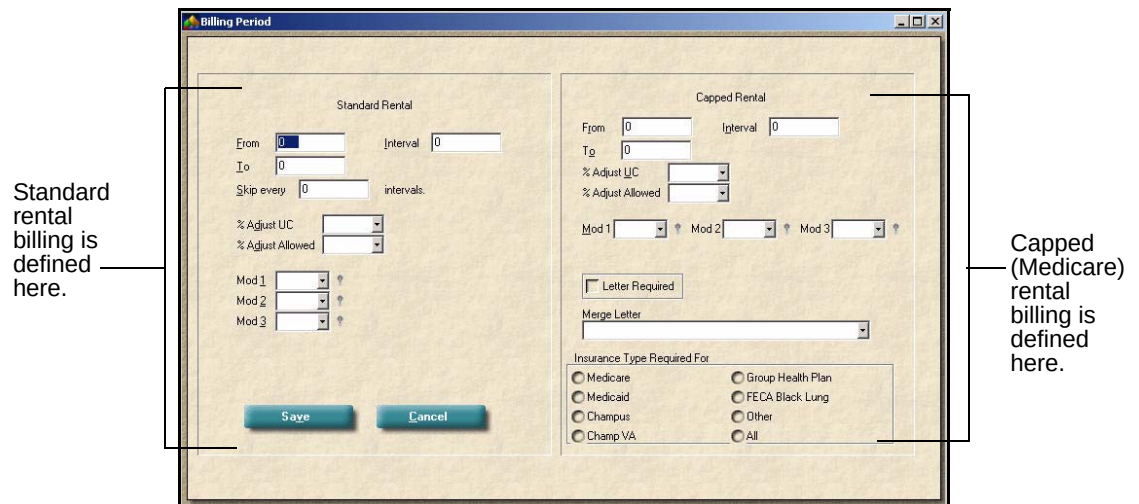

The 'Select Billing Table' dialog box shows a search field at the top. Below it, a list box contains the text '<None>'. At the bottom, there are buttons for 'Insert', 'Edit', 'Delete', and 'Duplicate'. A 'Select' button is located at the top right.

2. Click Add/Insert to display the Billing Table window.
 - This is where you will begin to create the Billing Table and define billing periods.

The Billing Table window is a dialog box with a title bar. It contains a Description field, an Apply Time As section with radio buttons for Hours, Days, and Months, a checkbox for Catch up billing to start of month, and a Service Date Cycle section with radio buttons for Bill at Beginning and Bill at End. Below these is a large empty table with columns labeled Std, Frm, To, M1, M2, M3, Cap, Frm, To, M1, M2, M3. At the bottom, there is a Total Entered field and six buttons: Add, Edit, Delete, Save, Apply, and Cancel.

3. Enter a name for the current Billing Table (e.g., Standard Monthly Rental, Capped Yearly Rental, etc.).
4. Select the appropriate information for the Apply Time As, Catchup Billing, and Service Date Cycle (see page A-9 for more information about these items).
5. Click Add/Insert to open the Billing Period window.

The Billing Period window is a dialog box with two main sections: Standard Rental and Capped Rental. The Standard Rental section includes fields for From, To, Interval, Skip every, % Adjust UC, % Adjust Allowed, and three Mod fields. The Capped Rental section includes fields for From, To, Interval, % Adjust UC, % Adjust Allowed, three Mod fields, a Letter Required checkbox, a Merge Letter dropdown, and an Insurance Type Required For section with radio buttons for Medicare, Medicaid, Champus, Champ VA, Group Health Plan, FECA Black Lung, Other, and All. Callouts point to the Standard Rental section with the text 'Standard rental billing is defined here.' and to the Capped Rental section with the text 'Capped (Medicare) rental billing is defined here.'

NOTE:

This is where you specify whether this is a standard or capped (Medicare) rental. You will need to define one or the other, but you cannot use both at the same time.

- **Standard Rentals**

For Standard rentals may include any non-capped rental situation as well as non-medicare recurring billing and purchases of equipment and/or supplies. In addition, you can set up intervals that allow you to skip billing periods.

Example

The diabetic supplies for Mrs. Rose is provided in cases. In Mrs. Rose's case, each case will provide her with a 45 day supply. Each prescription from Mrs. Rose's physician provides her with a 90 day supply. This means that she will need 2 cases. Therefore, you will need to bill her only twice since 2 cases will give her the 90 day supply as prescribed. To set this up for appropriate billing then, you will need to bill 3 intervals and skip every 3rd interval.

- **Capped Rentals**

Capped rentals are used for Medicare billing. Be sure to refer to the supplier guide in order to define the capped billing as appropriate.

6. Enter the information in the fields as appropriate to define the billing period.

- *See page A-6 for more information about the information that goes into the fields in this window.*

7. Click Save to store the billing information within the current Billing Table and return to the Billing Table window.

- *Repeat steps 2 through 8 as shown above for Billing Table you want to add.*

NOTE:

- You can return to this Billing Table to edit the information as needed by using the Edit (button) function as you would with any other record.
- Use the Release Now button on the rental page to release all available bills for the current rental.

Adding Rental Lines

When creating a rental page, you need to include at least one rental line. Rental Lines are based on HCPC codes and are the basis for all your patient and insurance billing.

From the main Rental Page record window (see page 6-2):

The screenshot shows the 'Rental Page' window with various fields for patient and insurance information. Annotations include:

- Click here to place the cursor in the rental line area. **OR** Click Insert or press the Insert key to open the Rental Line window.
- Click here to display the rental line window as shown in step 1.
- These dates are all significant as they are used when formulating various reports.

The window contains fields for Company, Name, Address, City/State, Specialist, Referral, Location, Bill Table, Item Out, Bill From, Number of Bills, Accept Assignment, Discount, Options, and a table for rental lines with columns: Srv From, Srv To, Qty, HCPC, Mod1, Mod2, Mod3, Pnt, Fee, Total. At the bottom are buttons: Edit, Insert, Delete, Duplicate, Release Now, Apply, Save, Cancel, and an Options section.

1. Click on the rental line area to place the cursor there.
 - You will not be able to see the cursor when it is placed in the rental line area.

**SHORTCUT:**

Click Insert or press the Insert key to open the Rental Line window.

2. Click Add/Insert to display the Rental Line window.

The 'Rental Line' window contains fields for Service From, Service To, Quantity, Bll Quantity, HCPC, Modifier, Diagnosis 1, Description, PQS, Fee, Allowed, Prescription, CMN 1, CMN 2, Prior Authorization, Max Rx, and Bx#.

3. Enter the appropriate information into the fields.

- Please see “Billing Table Window (in a Rental Page)” on page A-9 for more information about the fields on this record.

IMPORTANT!

DO NOT leave the Allowed field at 0.00, otherwise, the entire amount will be automatically written off.

4. Verify the dates of service.

5. Enter the quantity as appropriate.

6. Select the appropriate HCPC code.

SHORTCUT:

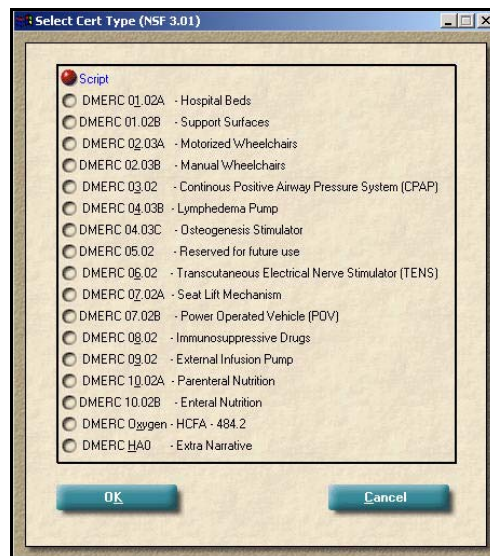

Press F2 to display the HCPC code list.

NOTE:

- If you have set up modifiers on an account type set up for this patient, the modifier information will autofill in this transaction. However, remember that if this is a DME transaction, you need to verify that DME HCPC codes have been selected as appropriate.
- If you have set up the fee schedule on the selected HCPC codes and within the patient’s insurance information, the price will autofill from there for this transaction. Be sure to verify that the codes that you are using are DME appropriate.

7. Specify any appropriate CMN.

8. Click Save to store the information and display it in the rental line field.

9. Click Save to store the information in the rental page and close the rental page record.

- Repeat steps 1 through 8 for each rental line you want to add. You can add an unlimited number of rental lines. However, once you exceed 6, the screen will automatically scroll so you can move through this list.

HINT:

If you are going to be adding more than one rental line to this transaction, you can click on Apply to save a rental line without closing the transaction. This will allow you to continue to add rental lines without having to reopen the transaction record each time.

Editing or Deleting Rental Lines

You can edit and delete rental lines in the same way you edit and delete other items in a list.

From the Rental Pages record (see page 6-1):

These dates are all significant as they are used when formulating various reports.

Srv From	Srv To	Qty	HCPC	Mod1	Mod2	Mod3	Pnt	Fee	Total
09/28/02	09/28/03	1	A4613				250.00	250.00	

1. Click on the rental line item you want to edit or delete.
2. Click Edit to open the rental line window for editing.

OR

Click Delete to delete the specified rental line item.

SECTION 7

REPORTS

What You'll Find In this Section:

- Page 7-1 ■ Using the Right Report
- Page 7-3 ■ Familiarizing Yourself
with Report Basics
- Page 7-16 ■ Generating AR Reports
- Page 7-28 ■ Generating Sales
Analysis Reports
- Page 7-35 ■ Create Custom Reports
with Report Writer

NOTES:

Using the Right Report

The Futura Application includes real-time accounting feature. This means when a new charge or payment is entered, it is immediately a part of the database, and the system adjusts the accounts receivable balances. This allows reports to run on the most current information every time. The only reasons this might change would be a change in the system date or a deletion or modification of data that has been posted. If the system date has been rolled back, it may adversely affect the previous post cycle.

**IMPORTANT!**

Rolling the system date back is strongly discouraged.

Futura offers you a large variety of reports from which to choose:

- **Accounts Receivable**
You can choose from several different reports here to compile just about any information you need about your accounts receivable activities.
- **Accounts Payable**
There are many reports available that allow you to track your accounts payable tasks.
- **Inventory**
You can easily run one of several inventory reports to help you to keep careful records of current and used inventory, inventory management, as well as for the purposes of re-ordering, etc.
- **Sales Analysis**
These reports give you the ability review any and all sales activity related to a number of items associated with patients and/or transactions.
- **Custom Reports**
There are many custom reports provided with the Futura application installation. These custom reports are those that have previously been found to be the most useful and most common. However, in addition to those included with the software, you can have any existing report type customized, as well as have nearly any report that doesn't exist created for you by the Futura Tech Support Department.

**NOTE:**

Contact Futura Tech Support for more information on creating custom reports for your business.

Cross Checks

There are areas of different reports which should give identical information (calculated in different ways) which are handy for checking the accuracy of your data. They are as follows:

- A) The total of new transactions from the Period Journal Summary (see page 7-17) should equal the total of new transactions from the Business Activity report (see page 7-21).
- B) Total income from the Deposit Slip report (see page 7-18) should equal the income of the Payments Sheet report (see page 7-19).
- C) The total AR Credits from the Payments Sheet report (see page 7-19) should equal the total credits from the Business Activity (see page 7-21).
- D) The total AR Debits from the Payments Sheet report (see page 7-19) should equal the total debits from the Business Activity (see page 7-21).

IMPORTANT!

- All of the above assume that the period in question is identical for all reports and that the options selected are identical for all reports. If you get discrepancies run the AR Trace report to locate data anomalies and follow its' instructions to make corrections.
- It is also recommended that you use the Audit Trail (see page 7-22) report to track any posted data or items that may have changed.

Familiarizing Yourself with Report Basics

While each report you run will result in different and varied information from each other, there are some aspects of running reports that will be the same or similar for all of them. These include:

- **Standard Windows and Options**
- **Printing Reports**
- **Elemental Report Functions**

Standard Windows and Options

Many of the reports in the Futura application use the same sets of windows and options. Below is a general listing of some of these similarities as well as where they appear.

Basic Journal Reports and Sales Analysis Options Window

This window appears when creating most of the AR Journal reports (see page 7-16) and when creating several of the Sales Analysis reports (see page 7-28) available in the Futura application. While the title of each window will change to refer to the specific report being run, the options and their effects will operate the same for each report.

Example:

See pages as noted for more information about these options:

See
IMPORTANT!
below

See page 7-4

NOTE

AR Aging and Collections reports use a different standard option window (see page 7-5).

IMPORTANT!

It is important that you include the history option when running reports. This is particularly true if you frequently use the Purge to History feature.

The options in the Basic Journal Options window are:

To/From Date Range

This date range will include the dates for which you want to run the current report.

Company

If your business consists of more than one company, you can choose to run this report for one of those companies only. However, if you want to run the report for all companies **OR** your business consists of only one company, leave the setting at the default (i.e., <All>).

Date Range Based On

Relating to the date range you selected above, you now need to specify on what criteria those dates are to be based (i.e., do you want to run the report based on service, Entry or Post dates).

NOTE

It is recommended that you use Entry or Post dates for running reports as Service dates can change.

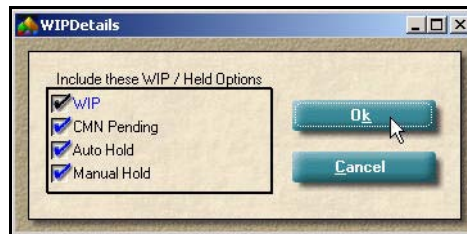

Report Options

These options allow you to specify in a general way the kind of information you want to include in the current report (e.g., pending transactions, WIP, include walk-ins, include active, etc.)

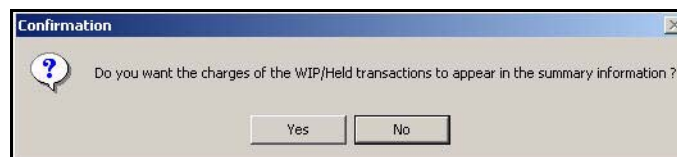

NOTE:

- If you select the Print Details options, details of the information in the report will be included. If you do not select this option, only a summary of the information will be generated. Depending upon the report for which you choose to include details, you will be presented with a series of choices about these details (see page 7-11 for more information).
- If you choose to include WIP in the report, a window will appear to ask which type of WIP you want to include before going onto the next window option for this report. If you did not include WIP, the next appropriate window for the current report will appear instead.

Include WIP Charges in a Summary Report

Some of the Journal reports (e.g., Period Journal, Patient Journal, Reimbursement Journal) in the Futura application give you the option to include any work-in-progress charges to the report.

Sort Report Results by Last Name or Date

There are various reports that require you to decide whether you want to sort the information alphabetically by patient name (in ascending order - A-Z) or chronologically by date (in ascending order - earliest to latest). During the time you are making the settings to generate one of these reports, the following options will appear.

Click Yes if you want the information to be organized by last name.

OR

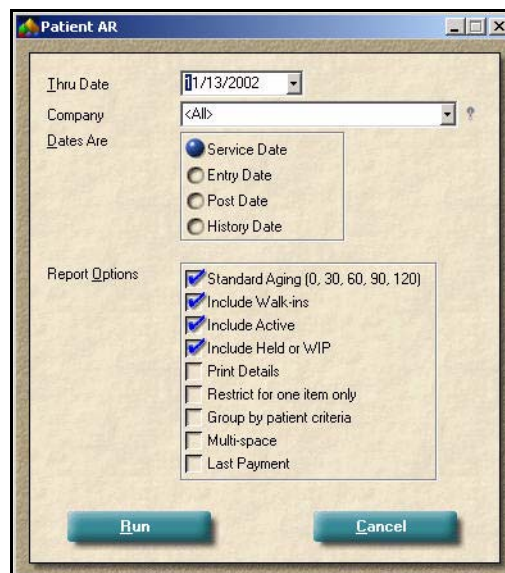

Click No to display the Sort by Date option.

**IMPORTANT!**

You **MUST** choose one of the sort options in order to generate the report. If you select No on both options, you will be returned to the Sort by Last Name window to repeat the process of selecting a sort option.

Basic Aging and Collection Reports Options Window

This window will appear in nearly all of the aging reports available in the Futura application. The options in this window allow you to set dates and aging options. While the title of each window will change to refer to the specific report being run, the options and their effects will operate the same for each report.

Example:

The options in the Basic Aging and Collection Reports Options window are:

Thru date

You will need to set an “ending” date for the aging. The system will automatically figure for the earliest date of any aged items (any unpaid item based on the basis set by the “Date Based On” option (e.g., through 5/14/03 will result in all aging information from the earliest possible date up through and including May 14, 2003).

Company

If your business consists of more than one company, you can choose to run this report for one of those companies only. However, if you want to run the report for all companies **OR** your business consists of only one company, leave the setting at the default (i.e., <All>).

Date Range Based On

Relating to the “Thru Date” you selected above, you now need to specify on what criteria that date is to be based (i.e., do you want to run the report based on service, Entry or Post dates). The beginning date will be automatically configured according to this setting (e.g., if you choose a through date of 5/14/03 based on service dates, the report information will result in all aging information from the earliest possible service date up through and including May 14, 2003).

NOTE

It is recommended that you use Entry or Post dates for running reports as Service dates can change.

Aging Report Options

In addition to the basic options that appear on the Most Common AR Window (e.g., Walk-ins, Active, WIP, and Print Detail options - see page 7-3), Additional Aging Report options include: Standard Aging, Restrict For One Item Only, Group by Patient Criteria, Mutli-space, Last Payment.

NOTE

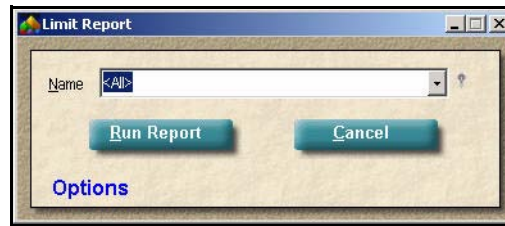

- If you choose to use the Standard Aging option, your report will include items for 0, 30, 60, 90 **AND** 190 days. If you do not use this option, before the report is generated, you will be asked to customize the various time breaks for which you want to run the aging report (e.g., 45, 90, 180 days -see Custom Aging Points window shown below). To use these settings you will need to enter the “breaks” in order to set the aging timing (e.g., using the previous example of 45, 90, 180 days, you would set line 1 to 45 days, line 2 to 90, and line 3 to 180 and the rest of the lines to 0).

Custom Aging Points

1. Age break at	0	days old (leave blank or zero to skip)
2. Age break at	0	days old (leave blank or zero to skip)
3. Age break at	0	days old (leave blank or zero to skip)
4. Age break at	0	days old (leave blank or zero to skip)
5. Age break at	0	days old (leave blank or zero to skip)
6. Age break at	0	days old (leave blank or zero to skip)
7. Age break at	0	days old (leave blank or zero to skip)
8. Age break at	0	days old (leave blank or zero to skip)
9. Age break at	0	days old (leave blank or zero to skip)
10. Age break at	0	days old (leave blank or zero to skip)

Note : To use these settings, change the aging breaks (in order) to your new break points. For instance, to setup 60, 120, and 240+ day aging, set #1 to 60, #2 to 120, #3 to 240, and #4 to 0.

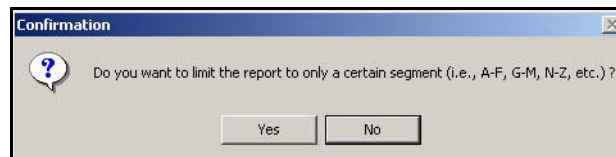

- You can use the Restrict for One Item Only option if you want to run aging for a specific patient or insurance company. Before the report is generated, a window will appear that allows you to specify the item (patient or insurance company) for which you want to run the report (see page 7-8 for more information).

- If you want to restrict the information in a report according to particular criteria (e.g., patient criteria), you can use this option. Before the report is generated, a Restrict Report window will appear (see below) to allow you to specify which criteria you want to use (i.e., account type, account status, referring source, etc.). From there you will be further asked to define the criteria based on the selection from the window shown below:

- You can use the Multi-space option to add more line spaces between rows of information. You will be given a chance (see option window below) to select the line spacing (e.g., 2 would equal 2 lines of space between each item). This feature allows you extra workspace to make notes, etc.

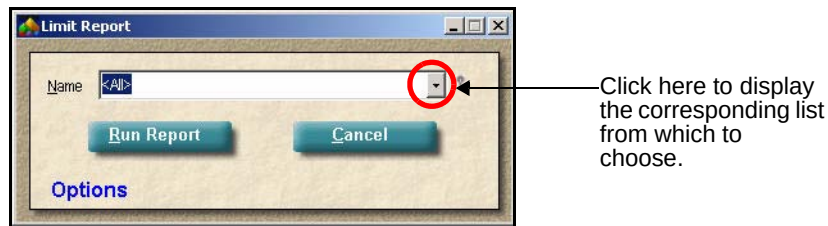

- You can select the Last Payment option to include the last payment made to any account included in the report.

Elemental Report Functions

There are additional and varied standard functions that appear in several reports besides those mentioned on pages 7-3 to 7-7.

Limit Reports by Item

Several reports (e.g., Aging reports, Patient Journal reports, some of the Sales Analysis reports, as well as a few others) contain an option that allows you to limit the report to a single item (e.g, specific patient or insurance company, etc.). Somewhere within the process of generating these reports, the window shown below appears. When it does, you can:

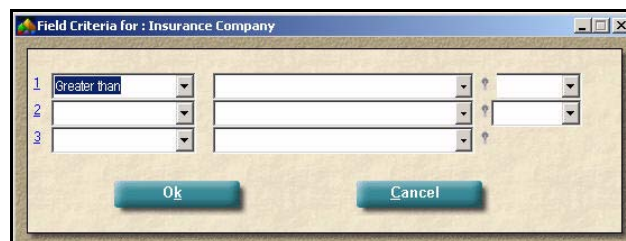

1. Click the drop down arrow to display the corresponding list of items (patients or insurance companies).
2. Select the item for which you want to run the report.
3. Click Run Report to display another option or generate the report
 - *This step may vary from report to report.*

Limit a Report by Segment

Some of the Futura reports (e.g., Cash Drawer, Aged Patient Aged Insurance, Sales Analysis by Transaction for HCPC Codes) allow you to sort information by segment (e.g., if you only want information about insurance carriers from Blue Cross to MetLife or patients names Carter to Rojas). During the process of generating these reports, the window shown below appears.

1. Click Yes if you want to limit the report to a certain group (e.g., carrier names from Blue Cross to MetLife) and display the window.
 - *If you choose to limit the report to a certain segment, the following window will appear.*

2. Select the parameters of the range of names (i.e., equal to, greater than, less than, etc.).
3. Select the first name to apply to the parameters.

Example:

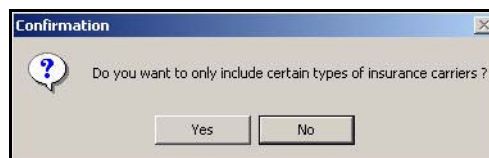

If you want to print all carriers with names after “Blue”, you would select “Greater than” and the name “Blue”. This would result in a report with carrier names AFTER any carrier with the name of Blue (i.e., Blue will not be included).

In addition, you can select the and/or option. For example, you could use the above example, then select OR, then on line 2 you can select the name of Blue Shield. Finally, once all your selections have been entered and/or selected, click OK to display the next option.

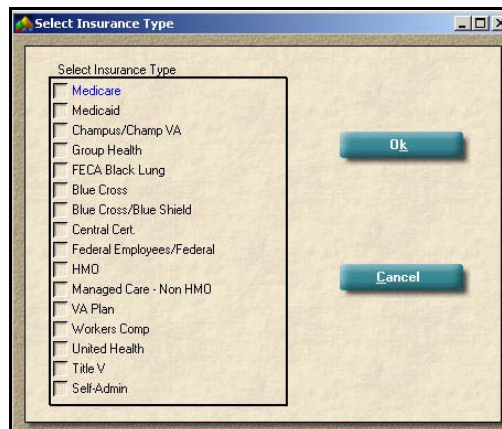

Include Only Particular Insurance Types in a Report**IMPORTANT!**

In order to use this option in a report, you must make sure that the insurance companies set up in your system have been assigned an Insurance Type (see pages 4-12 and A-25 for details about this setting).

Certain reports that you generate with regard to insurance companies give you the opportunity to specify the type of insurance companies you want to include (e.g., Medicare, Champus, VA Plan). During the set up for these reports, you will click Run and the following window will appear.

1. Click Yes to display the window that allows you to select which carrier types you want to include.

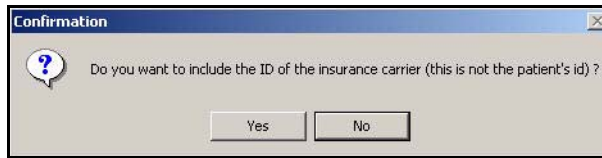

2. Select the insurance types you want to include in this report, then click OK to display the Insurance ID window:

OR

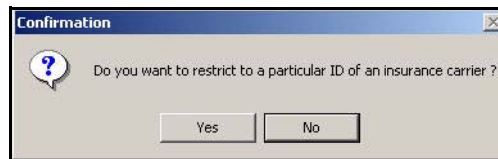

Click No to include all carriers.

Include Only Particular Insurance Carriers in a Report.

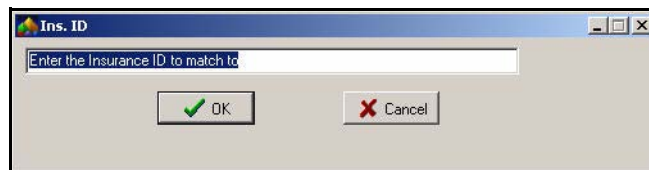

Like the previously mentioned option (see “Include Only Particular Insurance Types in a Report” on page 7-9) there are certain reports that you can generate with regard to insurance companies that give you the opportunity to restrict the insurance information included in them. The option as shown below allows you to specify whether or not you want to include carrier ID’s and whether or not you want to limit the report to one single carrier. After you click Run to generate these reports, another set of options will appear. Among them will be the following:

1. Click Yes to display the Insurance ID restriction option.

2. Click Yes to display the Insurance ID specification option.

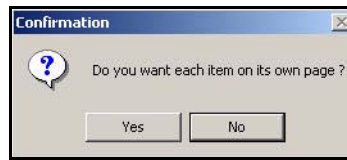

3. Enter the Insurance ID that matches the single carrier for which you want to run this report.

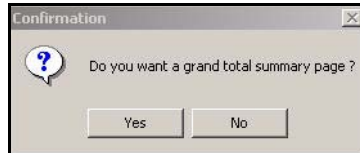

Print Detail Option

As one of the Standard options, if you choose this option, certain reports will present you with another series of choices to be made for the current report:

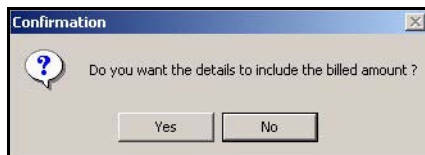

- **Print Each Item on a Separate Page**

- **Create a Grand Total Summary Page**

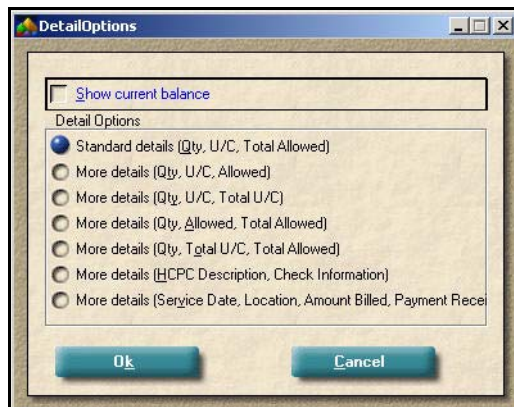

- **Include Billed Amounts**

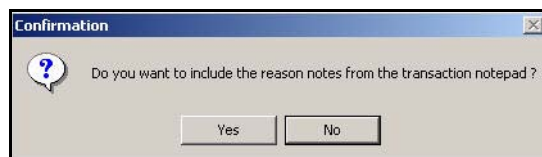

If you click Yes on this option, you will be presented with 3 more options:

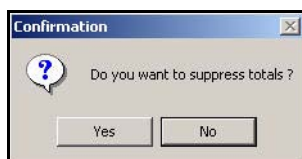

- *Detail Options - make the selection you want to apply to the details of this report with regard to billed amounts.*

- *Include Reason Notes from Taxes*

- *Suppress Totals*

Printing Reports

Although the options you have for each report and the information included in each generally varies from one to another, the method for printing never changes. Once you have completed the settings and selections for any report, it will be displayed in Notepad. Once it is displayed, you can then print it the following the procedure shown below.

- Depending upon the amount of information to be included in the report, it may take a few minutes for the report to generate and display on your screen.

**NOTE:**

Although it is not advisable, you can make changes at this point directly into the Notepad version. However, once you make changes in this format, you will need to use the File►Print option from within the Notepad function.

**IMPORTANT!**

- When using the File►Print option in Notepad, your print job may not be lined up properly.
- Since information can be changed in any item of a report, you cannot save a report within Futura. It is preferable that each time you need a report you regenerate it to make sure that any changes are reflected. However, once the report appears in the Notepad format, you can print it. However, you can also go to File►Save to save the report for later reference. This is the only way you can save the report. Otherwise you will need to regenerate the report.

From the displayed report:

1. Click (in the upper right hand corner of the screen) to close the Notepad window.
 - A confirmation message will appear to ask you if you want to print now or not.

2. Click Yes to print the report.

Printing Part of a Report Only

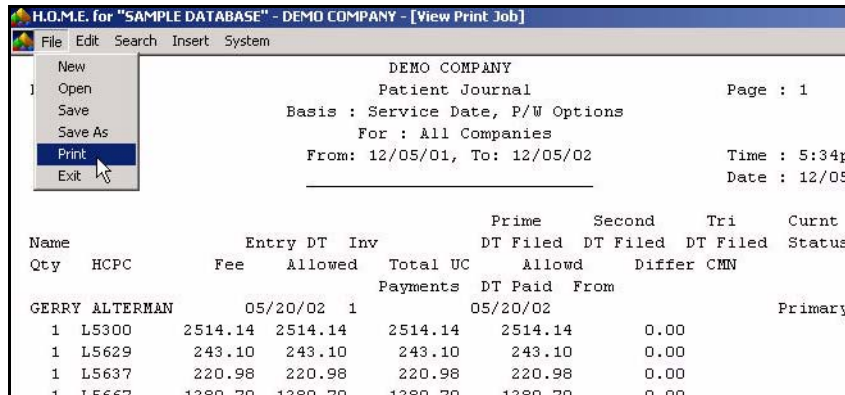

Once you have generated a report and it is displayed in the Notepad application, you can easily print a particular section of a report.

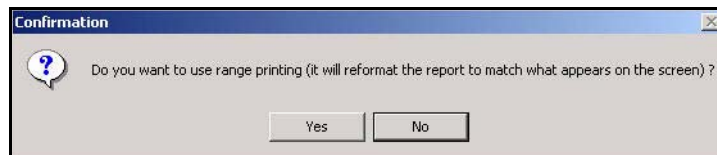

IMPORTANT!

When using the File►Print option in Notepad, your print job may not be lined up properly.

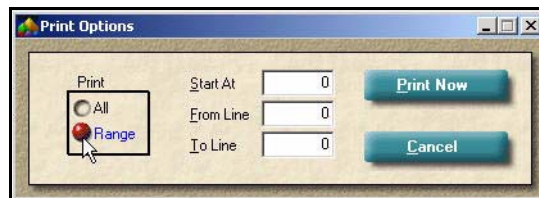

In Notepad:

1. Go to File►Print to display an option asking if you want to use “range printing” that allows you to select the part of the report you want to print.

2. Click Yes to display the Print Options window that allows you to specify which part of the report you want to print.

3. Select Range to set the option to print a partial report.
4. Enter the column number of the part of the report you want to print from (e.g., if you enter 1, the report will print from the first character space from the left margin; if you enter zero, the report will begin printing at the left margin).

NOTE:

Each character that appears within a horizontal line across the page represents a column. Most reports will be 80 characters or columns wide.

5. Enter the line number of the first line you want included in the report.
6. Enter the line number of the last line you want included in the report.

HINT:

Whenever you place the cursor in a report, its location (column and line positions) appear in the lower left corner of the Notepad window.

Transaction Summary Information

(1, 18) INS Printer File

This shows that the cursor is placed in at line 18 (18 lines from the top margin.

This shows that the cursor is placed in column "1" (one character space from the left margin.

7. Click **Print Now** to print the designated portion of the current report.

Generating AR Reports

You can run any and all of several different AR reports. These reports are grouped into three types:

- **Journal**

Journal reports provide a variety of chronological information regarding any of the activities recorded within your daily transactions and activities.

- **Aging**

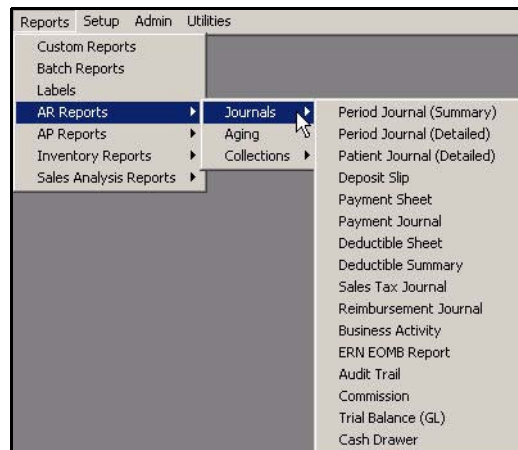

You can generate any of several reports that allow you to review any accounts with current and outstanding balances (e.g., accounts at 30, 60, and 90 days).

- **Collections**

These reports give you the ability to produce a listing of any accounts that are over due in payments.

Run Reports with Information about Your Daily Transactions (Journal Reports)

A description of each journal report available is included on the following pages. Journal reports include:

Period Journal (Summary)

This report is based on a date range that you specify. It includes a summary of transactions entered within the specified date range for the appropriate patients. You can have the report include details or just show only totals.

Example:

Your accountant needs to review the daily transactions for the 1st Quarter. However, he doesn't want to read 10 pages of details. He basically only needs the totals. You can quickly run this report for his use.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Group the Transactions** (see page 7-7 for information about grouping by criteria)
- **Sub-Group the Information by Company**
 - If you decide to sub-group in this way, click Yes to display the company list, then you can select the company by which you want the information sub-grouped
- **Show Only Outstanding Amounts**

You can use this option to include only transactions with unpaid balances.

**NOTE:**

This report balances with the Business Activity, Detailed Journal, and Analysis Reports.

Period Journal (Detailed)

Similar to the Period Journal (Summary) report, this report is based on a range of dates you specify. However, it includes specific details about the daily transactions within that range (e.g., charges, payments, and claim filing information). This report is usually quite extensive and lengthy.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Sort Report by Last Name or Date** (see page 7-5)

You must choose to sort the current report by the last name of the patients or by date.

Patient Journal (Detailed)

This report provides the same type of information as the Period Journal. However, this reports specifically and only provides such information about one particular patient only. It provides a complete financial history of the patient's account.

Example:

This report is useful for collection activities, as well as providing information to an outside party such as an attorney.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Limit the Report to a Specific Patient** (see page 7-8)
- **Sort Report by Last Name or Date** (see page 7-5)
You must choose to sort the current report by the last name of the patients or by date.

Deposit Slip

Like the other Journal Reports, this report is based on a date range. It generates a listing of selected payments (prepared for deposit) entered between those dates. However, only payments set to an income state are included. The details of each payment include the patient account, the payment type, and the amount of the payment.

In addition to this information two summary pages are printed at the end of the report. The first summary page reflects the total of each payment type from the details on the previous pages. The second summary page provides a breakdown of various income statistics.

You can set this report to provide details or only the summary pages as described above. In addition, you can generate the report and have it detailed by user. When you use this sort option, the information will be listed by batch number, check number, by date, and by user (i.e., user that entered the information).

Example:

You can use this report to proof the entries made for a large number of Medicare payments.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Payment Details** (see page 7-5)
- **Sort by Date, User, Batch and Check Number**
This option means that the information will first be sorted by date, then user, then batch (if there is one), then by check number (if there is one).
- **Sort by Tax Type**
Please see "Patient Record" on page A-43 for more information about Tax Types.
- **Sort by Company and/or Specialist**
You can sort just by company, OR you can choose to sort first by company, then by corresponding specialist(s).
- **Sort by Specialist and Company**
This option allows you to sort by Specialist then by corresponding company.

Payment Sheet

This report provides a listing of ALL payments entered within a specified range of dates; including any adjustments. This report allows you to use the same sort and detail vs. summary choices as the Deposit Slip Report (e.g., details, summary only, sort by user).

NOTE:

This report balances with the Business Activity Report.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Payment Details** (see page 7-5)
- **Sort by Date, User, Batch and Check Number**
This option means that the information will first be sorted by date, then user, then batch (if there is one), then by check number (if there is one).
- **Sort by Tax Type**
Please see “Patient Record” on page A-43 for more information about Tax Types.
- **Sort by Company and/or Specialist**
You can sort just by company, OR you can choose to sort first by company, then by corresponding specialist(s).
- **Sort by Specialist and Company**
This option allows you to sort by Specialist then by corresponding company.

Payment Journal

Similar to the Payment Sheet in that it provides a listing of ALL payments entered within a specified date range. However, this report also shows the charges that are offset by the payments. This report looks very much like the Period Journal (Detailed) report, but the report generates the balance for the payment sheet, not the Period Journals (i.e., only payments and payment affects are included).

Options available for this report are:

- **Standard Options** (see page 7-3)

Deductible Sheet

As the name implies, this report provides a list of details of all patient deductible payments entered within a particular date range. This report allows you to use the same sort and detail vs. summary choices as the Deposit Slip Report (e.g., details, summary only, sort by user).

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Payment Details** (see page 7-5)
- **Sort by Date, User, Batch and Check Number**
This option means that the information will first be sorted by date, then user, then batch (if there is one), then by check number (if there is one).
- **Sort by Tax Type**
Please see “Patient Record” on page A-43 for more information about Tax Types.
- **Sort by Company and/or Specialist**
You can sort just by company, OR you can choose to sort first by company, then by corresponding specialist(s).
- **Sort by Specialist and Company**
This option allows you to sort by Specialist then by corresponding company.

Deductible Summary

This report provides a summary listing of patient deductible payments for a specified date range.

Options available for this report are:

- **Limited Standard Options** (see page 7-3)
The Standard Options available for this report are From date, Date Based On, and the Pending and History Transactions Report Options.
- **Restrict by Group of Account Types**
If you click Yes, the Account Type list will appear. Click on the account type by which you want to restrict the report, then click Select to generate/display the report.
 - Please see “Patient Record” on page A-43 for more information about Tax Types.

Sales Tax Journal

As with the other journal reports, this report is based on a specified date range. It provides a listing of all sales tax due on items purchased by patients. It details this information as per the transactions and the associated tax categories.

Options available for this report are:

- **Standard Options** (see page 7-3)

Reimbursement Journal

This report can and should be used to get information about over payments made/entered for transactions within a certain date range. However, such overpayments are only included when the total payments received exceed the total charges AND there is an outstanding credit balance.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Sort Report by Last Name or Date** (see page 7-5)
You must choose to sort the current report by the last name of the patients or by date.

Business Activity

You can use this report to get a information regarding the balance forward amount from a previous month, as well as new charges (billing), new payments and an ending balance all within a specified date range.

Example:

This report can be easily run for accounting purposes to provide a quick summary and review of such activities.

NOTE:

This report balances with the Aged Summary Reports.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Sort Report by Last Name or Date** (see page 7-5)

ERN EOMB Report

This report is used only for ERN printouts, and, therefore, only applies if you receive ERN information from DMERC carriers. If this type of report is applicable to your situation, then the report you generate will process the ERN information and produce it in an EOMB-like report.

NOTE:

ERN Batch information must have previously been added to the system before this report can be run.

Options available for this report are:

- **Limit Report to a Specific ERN**
See page 7-8 for more information about limiting reports.

Audit Trail

This report provides any information that has been edited/changed with regard to payments or charges posted within a specific date range. It includes who made the change, when the change was made, and what change was made.

Example:

If you have a problem in balancing an account, you may want to run this report to review any changes that may have been made that may be affecting your balance as described above.

Options available for this report are:

- **To/From Date Range** (see page 7-4)
- **Select A/R or A/P changes**

Commission

You can easily get a listing of any commissions to be paid for transactions within a specific date range. You can include current/pending transactions, historical transaction information, etc. In addition, you can base the date range on entry, post, or service dates.

Example:

You can easily review the sales produced by a sales person or specialist who has a commission agreement with you to find out past and present commissions paid or due.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Include Status Codes for Each Specialist**

Trial Balance (GL)

This report generates a listing of all account balances within a certain date range, and provides a means of testing of how total charges compare to total payments for all accounts.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Include Status Codes for Each Specialist**

Cash Drawer

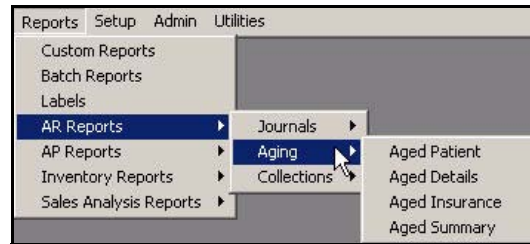

If your company has purchased the special Cash Drawer equipment from Futura, you can use this report to generate information about the payments (including cash, check or credit card) handled by a specific cash drawer user for a specific time period. This is an excellent way to summarize the day's "cash" for making bank deposits and reconciliation purposes.

Options available for this report are:

- **To/From Date Range** (see page 7-4)
- **Select a Specific Cash Drawer User**
- **Cash Drawer Lock**
When a cash drawer is created, it is assigned a number. You can enter the (lock) number of the cash drawer for which you want to run this report.

Run Reports to Find Out What Payments are Due and When (Aging Reports)

A description of each aging report available is included on the following pages. Aging reports include:

Aged Patient

This report provides payments due and owed by a patient (or patients) as per a specific date. You can designate whether you want just the patient portion of the balance due or the full balance. In addition, you can choose to view deductible amounts only. The amount(s) due will appear in 30, 60, 90, and 120 day breakdowns.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Include Patient IDs**
- **Sort the Report By Outstanding Balances Due**
This means that who owes the most will appear at the top of the report and those who owe the least will appear at the bottom of the report).
- **Include the Patient Addresses**
- **Restrict to A Certain Segment** (see page 7-8)
- **Include Detailed Percents Other Than Just The Totals For Each Item**
- **Include Only The Amounts (Monies) To Be Paid By Each Patient**
- **Include Amounts Due on Patient Deductibles**

HINT:

You can combine amounts to be paid by each patient and amounts due as deductibles to include only deductible amounts owed by patients.

Aged Details

You can generate this report to automatically view all of the details about any transactions containing any unpaid balances. It will include patient name, invoice number (if there is one), etc. The amount(s) due will appear in 30, 60, 90, and 120 day breakdowns.

NOTE:

You will not need to select any options. Just go to AR Reports►Aging►Aged Details to generate/display the aging details report.

Aged Insurance

Similar to the Aged Patient report, but this report provides payments due and owed by insurance carriers as per a specific date. The amount(s) due will appear in 30, 60, 90, and 120 day breakdowns.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Run This Report For Specific Carrier Types Only** (see page 7-9)
- **Include Insurance IDs**
This is the first field that appears in the Insurance record (see page A-27 for more information). You can choose to include insurance IDs for each carrier listed in this report. If you decide to include them, you will then have the following option:
 - **Restrict By Insurance ID**
This option allows you to run the report based upon the insurance IDs as described above.
- **Sort the Report By Outstanding Balances Due**
This means that the insurance company owes the most will appear at the top of the report and those that owe the least will appear at the bottom of the report).
- **Include The Carriers' Addresses And Phone Numbers**
- **Limit The Report To A Certain Segment** (see page 7-8)
- **Include Detailed Percents Other Than Just The Totals For Each Item**

NOTE:

If you chose to use the Print Details option (see page 7-11) for this report, you will also be asked if you want to include the Patient Insurance IDs (see page A-51).

Aged Summary

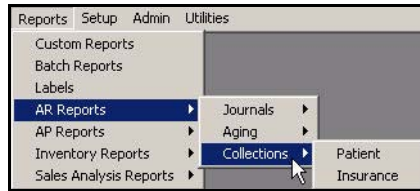

This report combines the Aged Patient and Aged Insurance reports. No specific details are listed, it simply summarizes the totals owed by patients and/or insurance carriers.

Options available for this report are:

- **Standard Options** (see page 7-3)

Run Reports to Find Out What Payments are Past Due (Collections Reports)

A description of each aging report available is included on the following pages. Collections reports include:

Patient

This report provides any over due owed by a patient (or patients) as per a specific date. You can designate whether you want just the patient portion of the balance due or the full balance. In addition, you can choose to view deductible amounts only. The amount(s) due will appear in 30, 60, 90, and 120 day breakdowns.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Include Patient IDs**
- **Sort the Report By Outstanding Balances Due**
This means that who owes the most will appear at the top of the report and those who owe the least will appear at the bottom of the report).
- **Include the Patient Addresses**
- **Restrict to A Certain Segment** (see page 7-8)
- **Include Detailed Percents Other Than Just The Totals For Each Item**
- **Include The Amounts To Be Paid By Each Patient**

Insurance

Similar to the Collections Patient report, but this report provides any over due payments owed by insurance carriers as per a specific date. The amount(s) due will appear in 30, 60, 90, and 120 day breakdowns.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Run This Report For Specific Carrier Types Only** (see page 7-9)
- **Include Insurance IDs**
This is the first field that appears in the Insurance record (see page A-27 for more information). You can choose to include insurance IDs for each carrier listed in this report. If you decide to include them, you will then have the following option:
 - ***Restrict By Insurance ID***
This option allows you to run the report based upon the insurance IDs as described above.
- **Sort the Report By Outstanding Balances Due**
This means that the insurance company owes the most will appear at the top of the report and those that owe the least will appear at the bottom of the report).
- **Include The Carriers' Addresses And Phone Numbers**
- **Limit The Report To A Certain Segment** (see page 7-8)
- **Include Detailed Percents Other Than Just The Totals For Each Item**

**NOTE:**

If you chose to use the Print Details option (see page 7-11) for this report, you will also be asked if you want to include the Patient Insurance IDs (see page A-51).

Generate Sales Analysis Reports

Futura provides several reports that allow you to review your revenue and by whom or how it was generated. A description of each Sales Analysis Report is included on the following pages. A wide assortment of Sales Analysis reports can be run for either of the following;

- **Transactions**

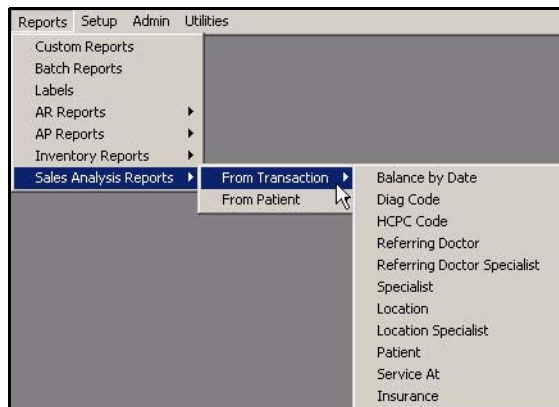

You can find out what revenue can be attributed to various aspects of transactions (i.e., where or how in a transaction revenue was generated).

- **Patients**

You can easily examine revenue and its sources by patient (i.e., what in the patient service generated revenue) - see page 7-34 for more information.

Run an Analysis of Your Revenue By Transactions

A description of each Sales Analysis Transaction report available is included on the following pages. Sales Analysis Transaction reports include:

Analyze Your Transaction Revenue Balance by Date

Find out patient balances according to date. You can include insurance balances as well as patient balances.

Options available for this report are:

- **Include the insurance balances for patients**
If you click No the report will be generated/displayed with patient balances only.
- **Include the patient balances with the insurance balances**
If you click No, the report will be generated/displayed with insurance balances only.

Analyze Your Transaction Revenue by Diagnosis Code

Review your revenue according to diagnosis code.

Options available for this report are:

- **Standard Options** (see page 7-3)
- **Limit The Report to a Specific Diagnosis Code** (see page 7-8)
- **Limit To Primary Diagnosis Code(s) Only**

Analyze Your Transaction Revenue by HCPC Code

Organize your transaction revenue according to the HCPC codes used. You can and must specify whether you want to run the report by individual codes, group codes, or categories.

Initial options available for this report are:

IMPORTANT!

There are 3 initial options in all from which to choose. Each time you click No on one of these initial options, the next option will appear. If you do not select one of these options, the report will be aborted.

- **Run Report by Individual HCPC Codes**

Within this option, you will need to further select from additional options: Standard options (see page 7-3), Limit the Report to a Specific HCPC Code (see page 7-8), Limit the Codes to a Specific Segment (see page 7-8), Sort by the Value of the HCPC Items Sold, Include details of the HCPC Categories.

- **Run Report by Group Codes**

Within this option, you will need to further select from additional options: Use Pre-defined Groups (as defined by Futura upon installation of the software). These pre-defined groups are basically ranges of the various HCPC codes.

Example.

L0100 through L1000 and/or L2000-L2050

- **Run Report by HCPC Categories**

Within this option, you will need to further select from Standard options (see page 7-3).

Example:

Orthotics, prosthetics, soft goods, appointments, etc.

**Analyze Your Transaction Revenue by Referring Doctor,
by Referring Doctors Associated with a Certain Specialist or just by Specialist**

You can use the report function to review what revenue has been obtained through the referring physicians listed in your system. In addition, you can run a separate report that allows you to review revenue related to referring doctors associated with a certain specialist or by specialist only.

Example:

Find out the sales generated by a particular referring physician.

OR

If you have assigned one of your practitioners to work with a specific referring physician, you can run a report to find out how much sales has been generated by the specialist in association with the corresponding referring physician.

Options available for these reports are:

- **Standard Options** (see page 7-3)
- **Limit The Report to a Specific Physician (or Specialist)** (see page 7-8)
- **Break Down Sales by HCPC Code**
- **Break Down Sales by HCPC Category**
- **Include Payment Activity**

NOTE:

If you click Yes to include payment activities, the following options will appear:

- If you did not include WIP transactions, you will be asked if you want to include WIP/Held transaction charges.
- You will be asked whether or not you want to include all payments with an effective date within the date range specified. If you click Yes to use this option you will then be asked if you want to include only payments from transactions with a service date within the date range specified.
- Finally, you will be asked if you want to include all payment types and amounts.
- Once all of the above choices have been made, the report will be generated.

**Analyze Your Transaction Revenue by Location,
by Locations Associated with a Certain Specialist or by Service Location only**

You can use the report function to review what revenue has been obtained through the locations within your system. In addition, you can run a separate report that allows you to review revenue related to locations associated with a certain specialist or by service location only (vs. patient location).

Examples:

You can use the location report to get all the sales generated by the Sunny Garden Nursing Home.

OR

You can also use the Location Specialist report to get all the sales generated by Sam Foreman at the Sunny Garden Nursing Home.

Options available for these reports are:

- **Standard Options** (see page 7-3)
- **Limit The Report To A Specific Location (Or Specialist)**
- **Sort The Information According To The Associated HCPC Codes**
- **Sort The Information According To The Associated HCPC Code Categories**
- **Include Payment Information**

NOTE:

If you click Yes to include payment activities, the following options will appear:

- If you did not include WIP transactions, you will be asked if you want to include WIP/Held transaction charges.
- You will be asked whether or not you want to include all payments with an effective date within the date range specified in the Standard Options.
- If you click Yes to use this option, you will then be asked if you want to include only payments from transactions with a service date within the date range specified in the Standard Options.
- Finally, you will be asked if you want to include all payment types and amounts.
- Once all of the above choices have been made, the report will be generated.

Analyze Your Transaction Revenue by Patient or Insurance

Find out about your transaction revenue as it relates to all (or a specific) patients or insurance companies.

Examples:

You can use the Revenue by Patient report to see all revenue generated by Priscilla Wagner or revenue generated by ALL active patients.

OR

You can use the Revenue by Patient report to see all revenue generated by Cigna Healthcare Insurance.

Options available for these reports are:

- **Standard Options** (see page 7-3)
- **Include The Insurance IDs (Revenue by Insurance Report only)**
- **Limit The Report To A Specific Patient Or Insurance Company**
- **Sort The Information According To The Associated HCPC Codes**
- **Sort The Information According To The Associated HCPC Code Categories**
- **Include Payment Information**

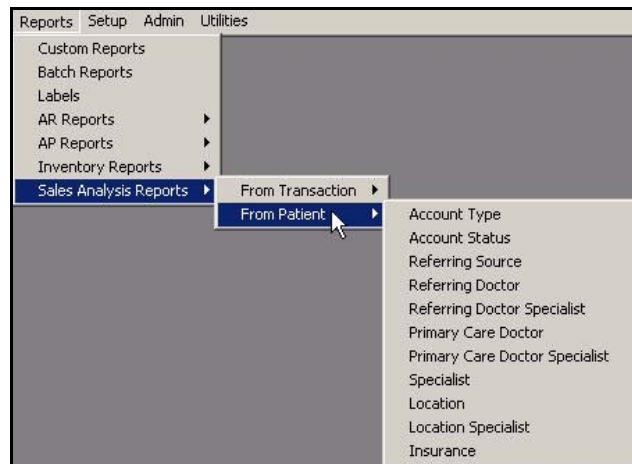

**NOTE:**

If you click Yes to include payment activities, the following options will appear:

- If you did not include WIP transactions, you will be asked if you want to include WIP/Held transaction charges.
- You will be asked whether or not you want to include all payments with an effective date within the date range specified in the Standard Options.
- If you click Yes to use this option, you will then be asked if you want to include only payments from transactions with a service date within the date range specified in the Standard Options.
- Finally, you will be asked if you want to include all payment types and amounts.
- Once all of the above choices have been made, the report will be generated.

Run an Analysis of Your Revenue By Patients

All of the Sales Analysis Patient reports offers the same options. You can run each report to review all items or a particular item (e.g., all account types or a specific account type, all referring doctors or a specific referring doctor, etc.). Sales Analysis Patient reports include:

Options available for these report are:

- **Standard Options** (see page 7-3)
- **Limit The Report To A Specific Patient Or Insurance Company (i.e., account type, account status, referring source, etc.)**
- **Sort The Information According To The Associated HCPC Codes**
- **Sort The Information According To The Associated HCPC Code Categories**
- **Include Payment Information**

NOTE:

If you click Yes to include payment activities, the following options will appear:

- If you are running the Insurance report, you will be asked if you want to include Insurance IDs.
- If you did not include WIP transactions, you will be asked if you want to include WIP/Held transaction charges.
- You will be asked whether or not you want to include all payments with an effective date within the date range specified in the Standard Options.
- If you click Yes to use this option, you will then be asked if you want to include only payments from transactions with a service date within the date range specified in the Standard Options.
- Finally, you will be asked if you want to include all payment types and amounts.

Once all of the above choices have been made, the report will be generated.

Create Custom Reports with Report Writer

While you can have Futura Technical Support create nearly any kind of custom report you might need, you can also create your own custom reports using a built-in set of customizable report formats. To do this, you use a feature in the Futura application called Report Writer.

The report writer is a built-in tool that allows you to extract very specific sets of information (via fields) from your database (i.e., more complex than some of the other reports provided in the application). For instance, it can sum columns of information and also restrict the output to only certain matching criteria. You can also include customized headers and footers, as well as change the report titles.

All of the information included in any of the built-in reports is based on the fields you decide to include (see page 7-42). You create the custom reports using the fields listed in each type of report and/or add new fields to include other information in the specific report. Once you save new fields in the report, you can go back and reuse the custom report any time you need to. You can also make adjustments to it as needed to include or exclude certain information (fields) previously included.

In addition to the built-in custom reports that you can edit as described above, you can create your own custom reports to this list. You can do this by creating a report as you would any other item in the system (see page 7-45).

Example:

You want to run a report that provides you with information about a group of patients that all live within a certain zip code, that have the same diagnosis, and all use the same referring physician.

NOTE:

- Please keep in mind that Report Writer does not permit cross-relational or analysis report generation beyond simple addition. For instance, the report writer will not correctly run a report that totals all patients with a particular HCPC that matches a particular HCPC category. The report writer would permit a report that totals all patients with a particular HCPC, but the system has no way refer back to the HCPC category to include that information.
- The same procedure described below for using built-in custom reports (i.e., add fields, etc.) can also be used for any reports you have created by Futura Technical Support.

IMPORTANT

For information about having very specific customized reports created for your business, contact Futura Technical Support.

Customize and Generate a Report

NOTE:

To review the details on various fields, refer to Appendix A in the Futura User Guide.

The reports that you can customize using Report Writer include:

- **Account Type**
This report allows you to view information according to account type. The default fields set for this report are the patient name, address, and account type.
- **Amount Billed**
You can use this report to allow you to review various aspects of the dollar amounts you have billed. The default fields set for this report are the patient name, amount that was billed on the account, and the date the billing was filed.
- **Physician Sales**
This report provides you with the data regarding the sales (current/pending) being generated by a physician or group of physicians. The default fields set for this report are the physician name, date of the “sale”, and associated invoice number.
- **Physician Sales History**
Similar to the Physician Sales report, this report will give you information about sales generated by physicians. However, in this case, the sales include only those that exist in transactions purged to history. The default fields set for this report are the physician name, date of the “sale”, and associated invoice number.
- **Balance Due**
This report will provide you with a list of only those patients with a balance due. But you can also include other fields to narrow this down further (e.g., patient’s with a particular HCPC code. The default fields set for this report are the patient name, invoice number, any balance due,
- **Collection Report**
You can review your collection activities and related issues by running this report. The default information set for this report includes patient name, any related invoice number, the balance due, any follow-up done on this issue, as well as the employee that performed the follow-up.
- **Diagnosis Code**
You can use this report to create a listing of all diagnosis codes and their descriptions used for patients in your office. You may also want to add patient names so that the codes are identified as to which patients have what diagnosis.
- **HCPC Listing**
You can use this report to create a listing of all HCPC codes and their descriptions used for patients in your office. The report also includes related fee levels, usual and allowed fees, as well as modifiers. You may also want to add patient names so that the codes are identified as to which patients have what diagnosis or print a list of codes and prices for a particular fee schedule.

- **Insurance Listing**

This report can be run to provide you with a listing of all insurance companies that you have stored in your system. By default, the company name and address are included, as well as the pay percentage and whether or not assignment is accepted.
- **Multicode List**

You can use this report to create a listing of any multicodes you have created in your system (see page 4-29). The default information included in this report includes the group ID, description of the codes, quantity (as in the case of items provided to the patient), any related HCPC codes, and fees.
- **Patient by Company**

If you have more than once company involved in your business, the default information included in this report allows you to make a list of all patients according to each company. It also includes default information on patient account and phone numbers.
- **Patient Primary Listing**

Use this report to create a list of patients according to their primary insurance company. This report includes the patient name, address, and phone number, as well as the name and address of their primary insurance company.
- **Patient Listing (Long)**

The default information in this report, by default, includes the patient name, account number, address and phone number. You may also want to include the patients' primary physician and specialist, etc.
- **Patient Listing (Short)**

Similar to the Long Patient Listing (see report described above), this report, by default, includes basic patient information. However, the default information only includes the patients' name, account and phone numbers.
- **Physician Listing**

This report includes default fields that will provide you with a listing of all physicians stored in your system, as well as the state in which they practice, their UPIN and Group ID numbers.
- **Recall Date**

By default, this report includes a list of patient names and the date(s) of any recalls made by your office.
- **Specialist Report**

Use this report to create a list of patients with associated specialist information stored in your system. The default fields included in this report are patient name, invoice number, and specialist name.
- **Transaction by Specialist**

Similar to the specialist report, this report includes, by default, a list of patient transactions associated with the specialists stored in your system. The information included in this report is specialist and associated patient names, invoice numbers, account type, date of the transaction, as well as its status.
- **Followup Activities**

This report can be used to review any and all follow up activities (see page 5-136). You can limit your report to a variety of criteria including specific date, range of dates, or an employee or group of employees, etc. The default fields included in this report are patient, invoice number, primary (insurance), follow up date, and employee.
- *If you do not see this report in the Custom Reports list, contact Futura Technical Support for assistance.*

Run an Existing Custom Report

You can run any of the reports using only the default information (see pages 7-36 and 7-37), by following the procedure below.

From the Reports menu:

1. Select Custom Reports to display the list of existing custom reports.
 - If Futura has created and added a special customized report for you, it will appear in this list.

2. Click on the report you want to generate.

NOTE:

- If you want to add, change, or delete the header and/or footer from the report, see page 7-39 for more information.
- If you want to add, change, or delete the information (fields) on a report see page 7-42 for more information.
- If you want to add a new report to the list, see page 7-45 for more information.

3. Click Run Report to generate/display the selected report in Notepad.

Use Headers and Footers for Custom Reports

You can easily create and use special headers and footers for your custom reports. In fact, you can create a list of them, store these in the system, and pick and choose from the list each time you run a report.

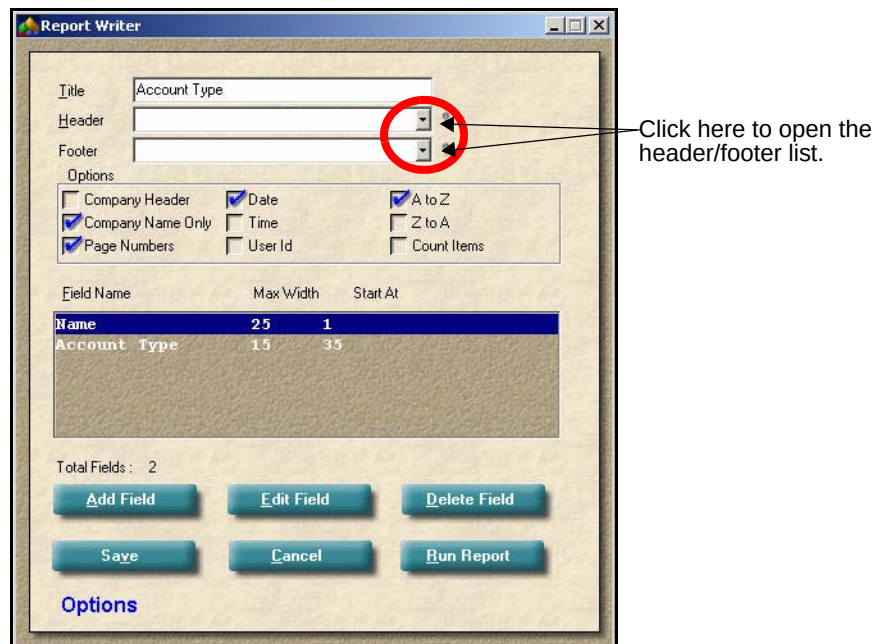

Example:

Header: Birthday Report

Footer: Date

From the custom report list (see page 7-38):

1. Double click on the report to which you want to add or create a header/footer to display the record for the corresponding report.

2. Click  next to the header or footer field to display the list of possible headers and footers.
 - Until you create one or more headers/footers, "<None>" will be the only item in the list as shown below.

- Once you have created one or more header and/or footer, you simply click on the item you want to use, then click Select to return to the main custom report list.
3. Click Insert to display the header/footer creation window.

NOTE:

- You can click Edit if you want to change an existing header/footer, then follow steps 4 and 5.
- You can select an item in the list and click Delete to remove a header/footer from the list.

4. Enter the text that you want to have appear in the header or footer.

5. Click Save and the new information will appear in the header/footer list.

- You can now select this new item to be included in the designated report.

Add, Edit, and Delete Information (Fields) for Customized Report

Whether you are using an existing report and changing the information you want included, or creating a new custom report (other than those created for you by Futura), you can use the process below to add, change, or delete information in the reports. Information is placed into the reports according to the fields designated for that report. In other words, each field represents a different piece of information. In addition, each field appears as a column in the report.

Example:

If you want to run a Physician listing, the report by default includes their name, state, UPIN, and Group ID numbers. It may be that you don't want to include the state in which they practice, but would like to list their phone number, E-mail, and specialty. In this case, you can easily delete the state field from the report, and add the phone, E-mail, and specialty fields as needed. In addition, you can assign the fields new names for this report only (e.g., instead of phone number you want to call that field "Contact Number").

From the custom report list (see page 7-38):

1. Double click on the report to which you want to add, edit, or delete a field to open the Field Definition record.

2. Enter a name for the field.
3. Enter a number for the width of the field (e.g., if you enter 20, the field will be 20 characters wide).
4. Enter the position at which you want the field to start (i.e., the column beginning position - each character space going across a page represents a "column". For example, if you want the first character in the new field to start 10 characters from the left side of the page, you would enter 10).
5. Click  next to the Data From field to display a listing of all the lists that exist in your system (e.g., employees, physicians, patients).
6. Select the list from which you want the information for this field will be obtained.

7. Click  next to the Field Is field to display a listing of all the fields that exist in the list you selected in step 6.
8. Select the field from which you want the information for this field will be obtained (e.g., if you chose the patient list, you will see fields like name, address, phone, diagnosis, etc.).
9. Click  next to the Merge File field to display a list of files/documents available to be associated (merged) with this field.

Example:

Perhaps you are running a custom report for patients with a particular account type (e.g., BK, RT) who haven't been seen in 2 years and you want to make them aware of a new prosthetic device in which they may be interested. You can attach a letter to this report which gives the patients details about the device and how to obtain it.

10. Select the options you want to apply to this field:
 - **Sum** - you can apply this option to a numerical field that represents a dollar amount. This is a right-justified format that will align currency fields by decimal or any other field to the farthest right available.
 - **Right Justify** - this option will right justify any information in this field, numerical or alphabetical.
 - **Criteria** - will cause the report writer to inquire what criteria when you run the report (see page 7-8 for more information on defining report criteria.
 - **Label** - Will generate labels using the information as defined previously in steps 6 and 7.
 - **SubTotal** - like the sum and numeric options, you can apply this option to a numerical field. This will generate a sub total for the information in this column (field) and output the result at the end of the report underneath this column (field).

- **Suppress** - If the Criteria option has been set as described above, you can use that option in conjunction with the Suppress option to limit the number of times a certain word or phrase is used in a report.

Example:

A commonly generated Custom Report is the HCPC Listing. You may want to run it so that you can get a list of fee schedules for Medicare. Since there is a column in the report to identify the provider source, you would notice that the word Medicare would appear many, many times on the same report. However, if you use this Suppress feature, you can cause the word "Medicare" to print one time only and be suppressed each time thereafter:

Suppress Option OFF		
L0110	CERVICAL, CRANIOSTENOSIS, HELME	MEDICARE
L0120	CERVICAL, FLEXIBLE, NON-ADJUSTA	MEDICARE
L0130	CERVICAL, FLEXIBLE, THERMOPLAST	MEDICARE
L0140	CERVICAL, SEMI-RIGID, ADJUSTABLE	MEDICARE

Suppress Option ON		
L0110	CERVICAL, CRANIOSTENOSIS, HELME	MEDICARE
L0120	CERVICAL, FLEXIBLE, NON-ADJUSTA	
L0130	CERVICAL, FLEXIBLE, THERMOPLAST	
L0140	CERVICAL, SEMI-RIGID, ADJUSTABLE	

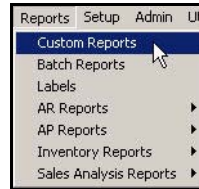

- **Average** - this option will provide an average of any numerical values in this field (e.g., qty sold, qty shipped, etc.).
- **Sum not \$** - you can apply this option to this field if you have designated it as a (non currency) numerical value (e.g., qty sold, qty shipped, etc.). This will generate a running total for every entry in this column (field) and output the result at the end of the report underneath this column (field).

11. Click Save to store the field in the current report.

Create a New Report

In addition to the reports that exist in the Futura application, and those which Futura can create for you, you can easily create your own reports.

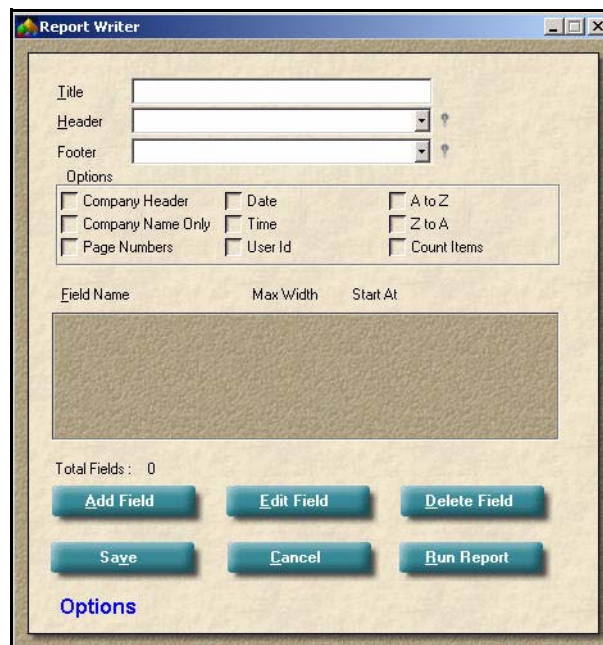

From the Reports menu:

1. Select Custom Reports to display the list of existing custom reports.
 - If Futura has created and added a special customized report for you, it will appear in this list.

2. Click Insert to display a blank (new) report record.

3. Enter a title for the report.
4. Add a header and/or footer (see page 7-39).
5. Select any of the options as appropriate.
 - **Company Header** - this is pulled from the company set up record and includes the company address, city, and state.
 - **Company Name** - will place the name of your company at the top of the report.
 - **Page #s, Date and Time** - these options will place consecutive page numbers, the current date, and the current time on each page of the report.
 - **User ID** - will include the ID of the user running the report.
 - **A to Z** - will cause the information in the report to be generated in ascending order (e.g., A to Z, 1 to 10, etc.).
 - **Z to A** - will cause the information in the report to be generated in descending order (e.g., Z to A, 10 to 1, etc.).
6. Add fields as needed (see page 7-42).
7. Click Run Report to run a test of the report to see if it appears the way it should.

AND/OR
8. Click Save to store the report in your Custom Report menu.

SECTION 8

INVENTORY

What You'll Find In this Section:

Page 8-1 ■ Inventory Basics

Page 8-2 ■ Set Up Your Inventory

Page 8-20 ■ Place, Verify, and Pay For
Orders

Page 8-33 ■ Provide Items to Patients

Page 8-34 ■ Run Inventory Reports

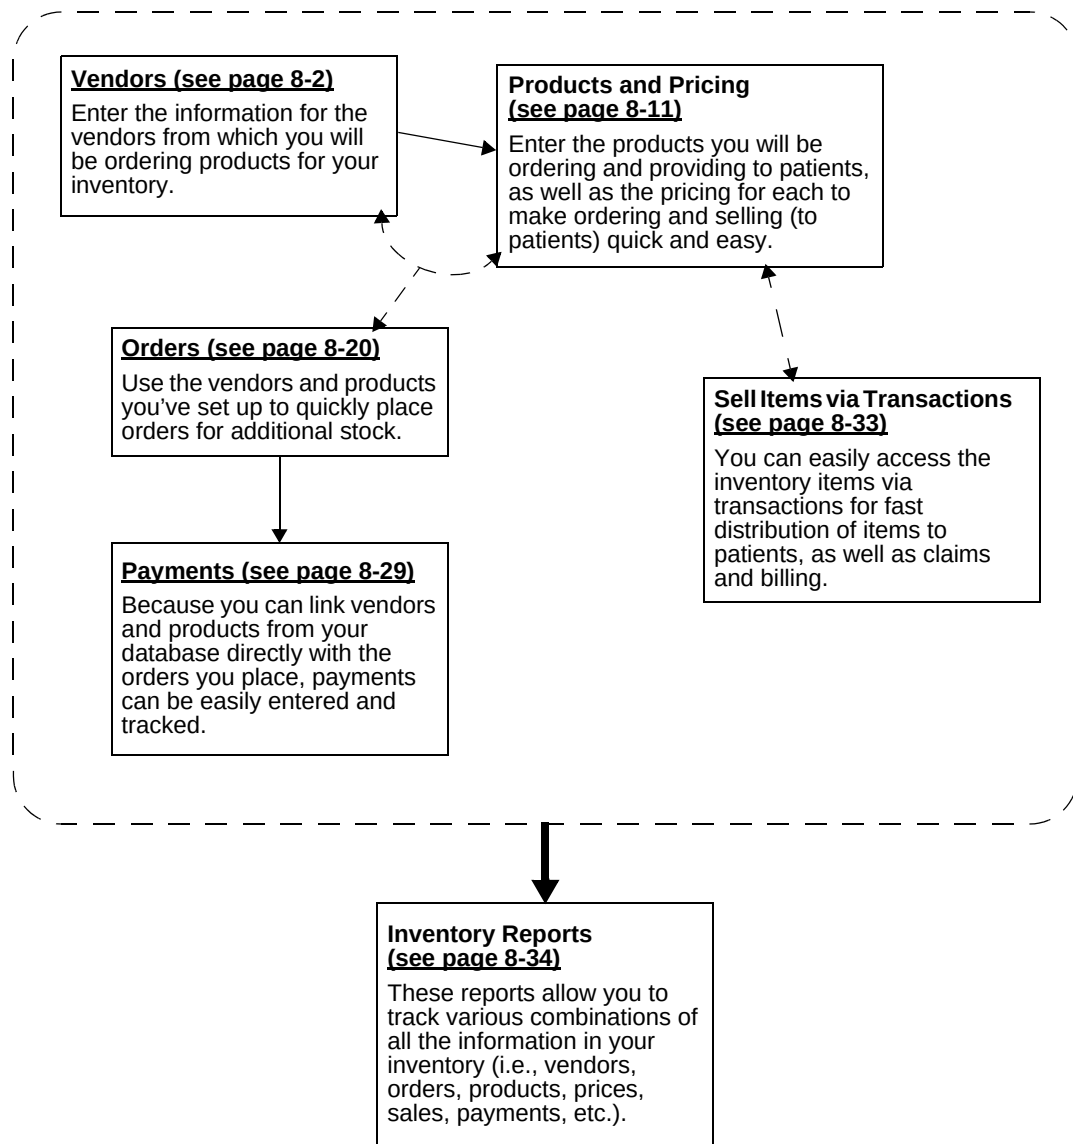

NOTES:

Inventory Basics

The Futura Inventory feature consists of the following basic elements:

- **Setting Up Your Inventory** (see page 8-2)
- **Placing Orders and Making Payments** (see page 8-20)
- **Sale of an Item via Transactions** (see page 8-33)
- **Inventory Reports** (see page 8-34)

The following diagram shows how these elements interact:

Set Up Your Inventory

Creating your inventory is done in 2 basic stages:

- **Set Up Vendors**
You will need to enter your vendor information into the system. The system allows you to associate the various items you need with the vendors from which you order them. This makes ordering much easier.
- **Set up Products and Pricing**
Once you have the vendors set up, you'll then need to actually set up the inventory items and prices in your inventory list.

Once your vendors and inventory items are set up, you can place and verify orders, make payments to vendors, provide items to your patients, and run inventory reports.

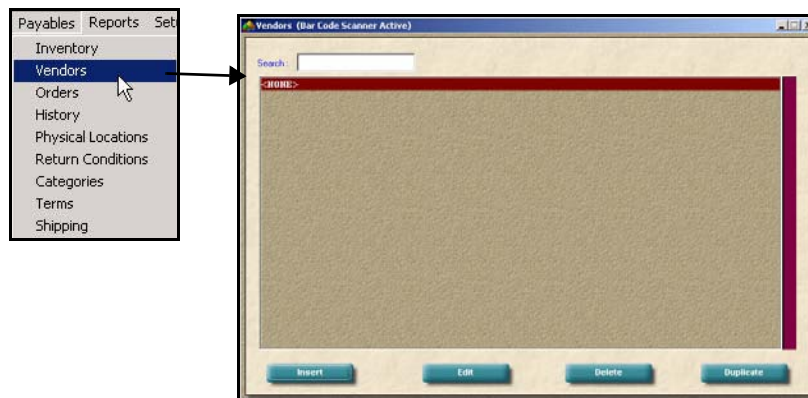

Setting Up Vendors

The best place to start setting up your inventory is with the vendors. This is where you enter all vendor information so that you can associate it with individual products later on.

- Please see “Vendor Record” on page A-118 for more information about the fields on this record.
- Once you set up a list of vendors, you can associate them with related products from your inventory.

1. Go to Payables ► Vendor to display the Vendor list.

- *Until you enter information for one or more vendors, “<None>” will be the only item in the list as shown below.*

- Click Add/Insert to open a new (blank) vendor record.

The screenshot shows a 'Vendor' form with the following fields and controls:

- Company:** A dropdown menu showing '1) ABC Company'.
- Name:** A text input field.
- Address 1:** A text input field.
- Address 2:** A text input field.
- City:** A text input field.
- State:** A text input field.
- Zip:** A text input field.
- Shipping:** A dropdown menu.
- Terms:** A dropdown menu.
- Deliv Days:** A text input field with the value '0'.
- Acct #:** A text input field.
- Tag Exempt:** A checkbox.
- Contact 1:** A text input field.
- E-mail 1:** A text input field.
- Contact 2:** A text input field.
- E-mail 2:** A text input field.
- Fax:** A text input field.
- Web Site:** A text input field.
- Buttons:** 'Save', 'Cancel', 'Balance', and 'Products'.
- Options:** A link below the buttons.

- Enter the appropriate information into the fields.
 - Please see "Vendor Record" on page A-118 for more information about the fields on this record.*
 - See "Setting up Vendor Shipping Methods" on page 8-4 for details about setting up shipping types (methods).*
 - See "Setting up Vendor Payment Terms" on page 8-6 for details about setting up terms (for payment to this vendor).*

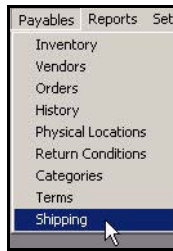

**NOTE:**

Once you enter products into your inventory list, you can return to this vendor, click the Products button, and link various products directly with this vendor. Once you do this, you can always come back to this vendor to find out or review what products this vendor offers. In addition, you can run a report that will detail this information for you for each vendor.

- Click Save to store the vendor information.
 - Repeat steps 2 through 4 for every vendor you need to enter.*

Setting up Vendor Shipping Methods

It is always helpful to know what shipping methods each of your vendors uses. It not only gives you an idea of delivery times, but whether or not you can track a shipment, and who will be bringing it, as well as what kind of shipping charges you'll be paying (e.g., USPS costs less than UPS). Therefore, Futura allows you to associate shipping methods with each vendor in your system.

1. Go to Payables►Shipping to display the Select Shipping Types list.
 - Until you add one or more shipping types/methods, "<None>" will appear in the list.

2. Click Insert to display the Shipping Modes record.

3. Enter a description for the shipping method (e.g., USPS Priority, Direct Delivery, Fed Ex Overnight, UPS 2-Day Delivery, COD, etc.).
4. Click Save to store the shipping method in the Shipping Types list.
 - *You will be able to access this same list from any vendor record.*

Setting up Vendor Payment Terms

It is likely that you may have different payment terms for various vendors from whom you buy products for your inventory. It makes it much easier to track and monitor your AP activities, especially due dates on payments if this information is stored for each vendor. It may also be the case that certain vendors offer you discounts for payments made within a certain time of the invoice date. You definitely want to keep track of those so that you can take advantage of any possible discounts.

In addition, you can easily run reports that tell you when various payments are due. But you can only run such reports if you have the payment terms specified for each vendor.

Example:

Tried and True may offer you a 10% discount if you pay within 15 days of the invoice date, while Barnes International offers no discount, but requires payment within 30 days of the invoice date.

1. Go to Payables►Terms to display the Select Terms list.
 - Until you add one or more shipping types/methods, "<None>" will appear in the list.

2. Click Insert to display the Terms record.

Terms

Description

Due Days

Discount % if paid in days.

Interest % charged when overdue per period, e.g., 18% annual is 1.5% per 30 Days

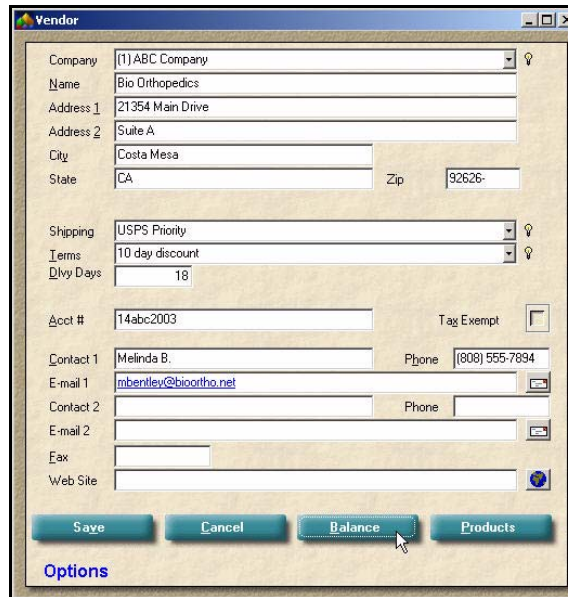

[Options](#)

3. Enter a description for the agreed upon terms (e.g., 15 day discount, 30 day required payment, Free Shipping if COD, etc.).
4. Enter the number of days from the invoice date you have to send the payment.
5. Enter any discount and any number of days for the discount eligibility (e.g., 10% and 15 days).
6. Enter any interest percentage that will be added to any late payments.
7. Click Save to store the terms within the Select Terms list.
 - You will be able to access this same list from any vendor record.

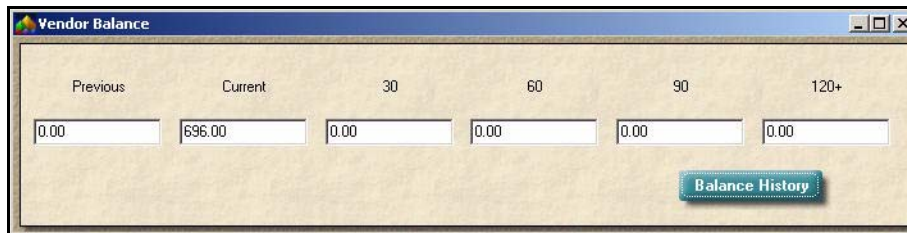

Review a Vendor Balance and Outstanding Orders

You can easily review any balance you may owe, as well as any orders that have yet to be received from this vendor by using the procedure below.

From the Vendor record:

1. Click Balance to display the balance window for this vendor.
 - This window shows any monies (by aging) still owed to this vendor.

Previous	Current	30	60	90	120+
0.00	696.00	0.00	0.00	0.00	0.00

2. Click Balance History to display any outstanding orders.

NOTE:

You can then double click on any order in the list to review the information and status.

Associating Existing Products with a New Vendor

It is very likely that even after you set up your inventory, you will add new vendors to the system. Just like you can associate new products with an existing vendor (see “Associating Vendors with Specific Inventory Items” on page 8-15), you can also associate an existing product with a new vendor.

From the record of the new vendor:

The screenshot shows the 'Vendor' form with the following data entered:

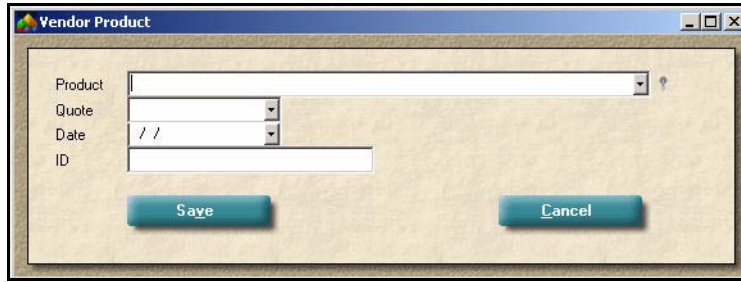

- Company: (1) ABC Company
- Name: Bio Orthopedical
- Address 1: 21354 Main Drive
- Address 2: Suite A
- City: Costa Mesa
- State: CA
- Zip: 92626
- Shipping: USPS Priority
- Terms: 10 day discount
- Delivery Days: 18
- Acct #: 14abc2003
- Tax Exempt: ☐
- Contact 1: Melinda B.
- Phone: (808) 555-7894
- E-mail 1: mbentley@bioortho.net
- Contact 2:
- E-mail 2:
- Fax:
- Web Site:

Buttons at the bottom: Save, Cancel, Balance, Products (highlighted), and an Options link.

1. Click Products to display the Vendor Product List for this vendor.
 - Until you associate one or more products with this vendor, nothing will appear in this list.

The screenshot shows the 'Vendor Product List' window. The search bar is empty. The product list area is empty. Buttons at the bottom: Insert, Edit, Delete, Duplicate.

2. Click Insert to display the Vendor Product record.

The screenshot shows a dialog box titled "Vendor Product". It contains four input fields: "Product" (a text box with a dropdown arrow), "Quote" (a text box with a dropdown arrow), "Date" (a text box with a dropdown arrow showing "//"), and "ID" (a text box). At the bottom of the dialog box are two buttons: "Save" and "Cancel".

3. Select the existing product you want to associate with this vendor from Inventory Product list.
4. Enter any price quote you may have received from this vendor for this particular product.
5. Enter the date on which you received the quote (since quotes tend to be time sensitive).
6. Enter the vendor ID for this product.
7. Click Save to store the association between this vendor and product.

Setting Up Products and Pricing

Once you have vendors set up, you can enter the products you have purchased and/or will be purchasing from them. In this way, you can associate each item and its price with the appropriate vendor(s). This makes ordering quick and easy by preventing you from having to search or look up vendor information. In addition, you can include the pricing for each item so that anyone ordering a product knows the amount to be paid for an item.

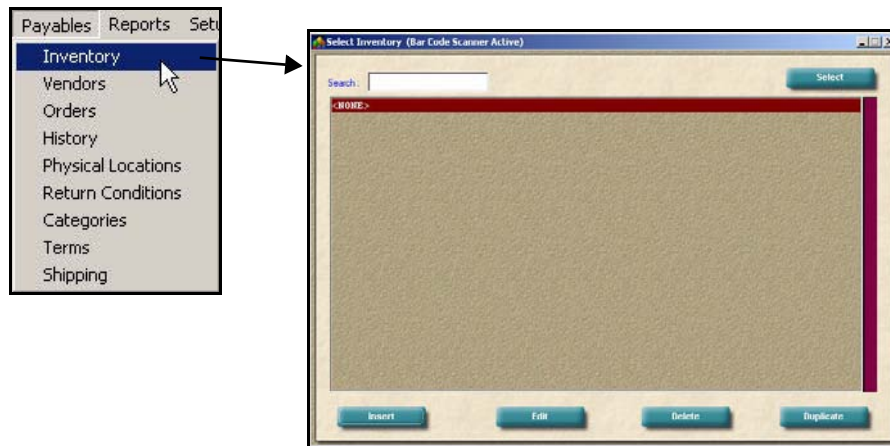

NOTE:

- While you can enter the pricing information, it can always be left out which requires that the person ordering check the price with the vendor each time an item is entered. If you do enter a price, it can always be overwritten for each order (e.g., if a vendor offers a special one time price for an item).
 - To add specific details (purchase date, serial number, vendor) to items already in your inventory, see “Adding More Detail to Inventory Products” on page 8-14).
- Please see “Inventory Product Record” on page A-33 for more information about the fields on this record.

1. Go to Payables►Inventory to display the Inventory Product list.

- Until you enter one or more inventory items (products), “<None>” will be the only item in the list as shown below.

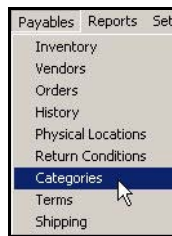

2. Click Add/Insert to open a new (blank) inventory product record.

3. Enter the appropriate information into the fields.
 - Please see “Inventory Product Record” on page A-33 for more information about the fields on this record.
 - See below for information about adding Categories to the system.
 - Please see “Adding More Detail to Inventory Products” on page 8-14 for more information about the fields on this record.
 - Please see “Associating Vendors with Specific Inventory Items” on page 8-15 for more information about the fields on this record.
4. Click Save to store the inventory item (product).
 - Repeat steps 2 through 4 for every inventory item you need to enter.

Creating Inventory Product Categories

From within the Inventory Product record (see page 8-11), you can associate an item with a category. By doing so, you can further organize your products (e.g., orthotics, prosthetics, materials, supplies, equipment, wheelchairs, soft goods, etc.)

1. Go to Payables►Categories to display the Categories list.
 - Until you add one or more categories, “<None>” will appear in the list.

2. Click Insert to display the Category record.

A screenshot of a software dialog box titled "Inventory Category". The dialog box has a blue title bar with standard window controls (minimize, maximize, close). The main area has a light beige background. It contains a label "Category Based On:" followed by a white text input field. Below the input field are two blue buttons with white text: "Save" and "Cancel".

3. Enter a description for this category (e.g., ORTHOTICS, PROSTHETICS, etc.).
4. Click Save to store the category.

Adding More Detail to Inventory Products

While you can enter information for products that you have not yet ordered, as well as those you already have on hand, you can add additional lines of information as you do in a transaction for items already in your physical inventory. However, the lines of detail you will be adding to your inventory items will consist of serial numbers, dates of purchase, storage location, etc.

- Please see “Master Discrete Inventory (Adding Detail to Inventory Items)” on page A-36 for more information about the fields on this record.

Example:

On Thursday, you only had 1/2 dozen stump socks left in your inventory. Your original order for those existing in your inventory was placed 6 months ago with “A1 Prosthetic Products” as the vendor. However, on Monday, you received your new shipment of 2 dozen from Tried and True Medical Supply”. You can use this feature to enter the existing socks in your inventory and their location, as well as the vendor from which you ordered them and the date you received the new order. You can also specify their location.

From the Product Inventory Record (see page “Setting Up Products and Pricing” on page 8-11):

The screenshot shows the 'Inventory Product' window with various input fields for product details. The 'Insert' button at the bottom left is circled in red, indicating the next step in the process.

1. Click Insert to display the Master Discrete Inventory record.

The screenshot shows the 'Master Discrete Inventory' window. It contains fields for Company, Inv Code, Qty, Cost, Purchased date, Vendor, Serial #, Location, Shelf, Bin, and Notes. There are also radio buttons for Status (N/A, Rental Item In, Rental Item Out) and 'Save' and 'Cancel' buttons at the bottom.

2. Enter the appropriate information into the fields.
 - Please see “Master Discrete Inventory (Adding Detail to Inventory Items)” on page A-36 for more information about the fields on this record.
3. Click Save to store the added details inventory item (product).
 - Repeat steps 1 through 3 for every line of detail you want to enter for this product.

Associating Vendors with Specific Inventory Items

Once you have an item entered in a record, you can associate that item with one or more existing vendors (i.e., from whom do you or can you order this item). This makes ordering, reordering, payments easier to do. It also makes inventory reports more effective (e.g., when you want a report that links specific products with specific vendors. This process will create a separate list of vendors for each item.

**NOTE:**

You can also associate a new vendor with existing products.

Example:

You may have several vendors from which you order stump socks. However, these vendors are probably different than those you order ankle gauntlets. You have associated stump socks with the vendors from which you can and usually order them, and ankle gauntlets with the vendors from which you order them. Therefore, when you are ready to reorder the socks or gauntlets, all you have to is look up the product in your inventory, and view the related vendors automatically. This saves having to try to remember or search for vendors that carry these different products.

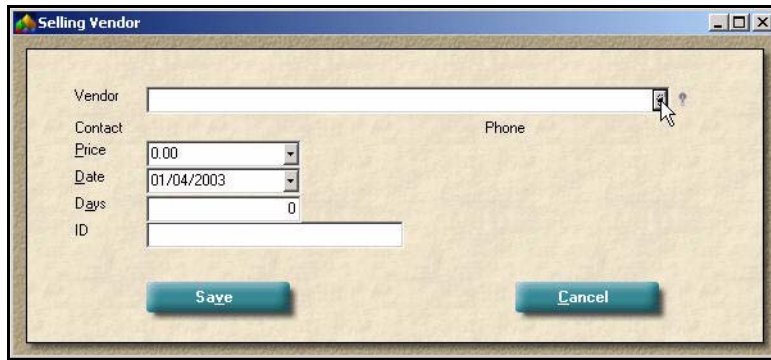

From the Product Inventory Record (see page “Setting Up Products and Pricing” on page 8-11):

The screenshot shows the 'Inventory Product' window with various input fields like 'Igv Code', 'Description', 'Unit of Measure', 'Prime Vendor', 'Category', 'HCPC', 'Retail Price', 'Min Units', 'Max Units', and 'GL'. Below these fields is a table with columns: Qty, Cost, Purch Date, Serial #, and Location. At the bottom, there are buttons: Insert, Edit, Delete, Break, Save, Cancel, Vendors (circled in red), Parts List, and Build. Summary statistics at the bottom show Total Units: 0, Units Sold: 0, and Units Ordered: 0.

1. Click Vendors to the master Selling Vendors list.
 - *Until you add one or more vendors to this list, nothing will appear.*

The screenshot shows the 'Selling Vendors (Bar Code Scanner Active)' window. It has a 'Search:' field at the top. Below it is a large empty area for the vendor list. At the bottom, there are buttons: Insert (with a mouse cursor over it), Edit, Delete, and Duplicate.

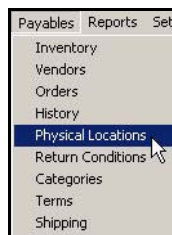

2. Click Insert to display the Selling Vendor record.

A screenshot of the 'Selling Vendor' form. It has a title bar with a small icon and window controls. The form contains several fields: 'Vendor' (a text box), 'Contact' (a text box), 'Price' (a dropdown menu showing '0.00'), 'Date' (a dropdown menu showing '01/04/2003'), 'Days' (a text box showing '0'), and 'ID' (a text box). There is also a 'Phone' label next to a small icon. At the bottom, there are two buttons: 'Save' and 'Cancel'.

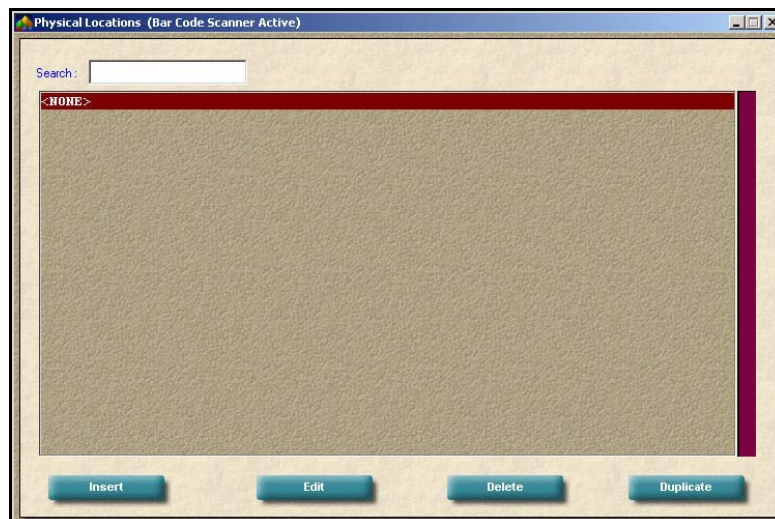

3. Enter the appropriate information into the fields.
 - Please see "Selling Vendor Record" on page A-86 for more information about the fields on this record.
4. Click Save to store the vendor information with this item (product).
 - Repeat steps 2 through 4 for every vendor you want to associate with this item.

Add Physical Locations for Inventory Product Storage

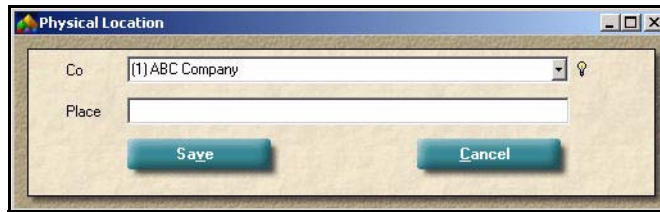

When you are adding a product to the inventory list, you can specify a location in which that item is stored (e.g., a specific room, office, etc.). If you carry a large inventory stock this feature can make it very easy to organize and find specific items in the inventory.

1. Go to Payables►Physical Locations to display the Physical Locations list.
 - Until you add one or more physical locations, "<None>" will appear in the list.

A screenshot of the 'Physical Locations (Bar Code Scanner Active)' form. It has a title bar with a small icon and window controls. The form contains a 'Search:' label and a text box. Below the text box, there is a large area with a red border containing the text '<None>'. At the bottom, there are four buttons: 'Insert', 'Edit', 'Delete', and 'Duplicate'.

2. Click Insert to display the Physical Location record.

A screenshot of a software dialog box titled "Physical Location". It features a light blue header bar with the title and standard window controls. The main area has a light beige background. There are two input fields: "Co" with a dropdown menu showing "(1) ABC Company" and a lightbulb icon, and "Place" with a text input field. At the bottom are two blue buttons labeled "Save" and "Cancel".

3. Confirm or select the correct company for this location (i.e., if your organization consists of one or more company, and you use the location of any of those other companies as a storage location, you'll need to specify which company it is).
4. Enter a description for the actual place (e.g., South Street office, Storeroom A, etc.).
5. Click Save to store this location in the system.

HINT

You can now use this location when adding detail to inventory items (see page 8-14).

Create a Parts List to Build an Inventory Item

If you are entering an inventory product that actually consists of other parts or items in your inventory, you can associate and store those individual parts using this feature.

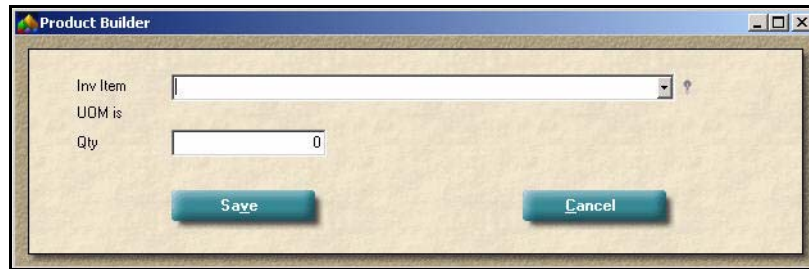

Example:

You enter a KAFO with knee and ankle joints as one of your inventory products. Since this item consists of other items within your inventory such as (1 ea) L2036 - KAFO, (2 ea) L2405 - knee joint, and (2 ea) L2200 - ankle joint, you can include (associate) such a parts list as part of this inventory item, while maintaining the individual parts separately as well.

From the Product Inventory Record (see page “Setting Up Products and Pricing” on page 8-11):

1. Click Parts List to display the Product Builder list associated with this inventory item.
 - Until you add one or more parts to this list, nothing will appear.

2. Click Insert to display the Product Builder record.

A screenshot of a software dialog box titled "Product Builder". The dialog box has a light blue title bar with standard window controls (minimize, maximize, close). The main area has a tan background. It contains three input fields: "Inv Item" (a dropdown menu), "UOM is" (a dropdown menu), and "Qty" (a text box with the value "0"). Below these fields are two buttons: "Save" and "Cancel", both with a blue gradient and a slight shadow.

3. Select the Product Item from your inventory list.
4. Enter the number of the item you selected in step 3.
5. Click Save to store the part in the parts list of the current product item being "built".
 - Repeat steps 2 through 5 for every part you want to add to the parts list.

Place, Verify, and Pay For Orders

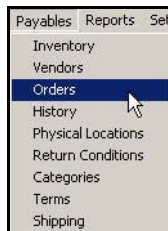

Of course you can always place orders for any products you need without first adding vendors and products to the list, but the process is made quick, easy, and seamless if you do set up the vendors (see page 8-2) and product items in your inventory (see page 8-11). As soon as the placed order is received, you should verify what was received with the order placed. Once that has been done, you can use the information in the system to help you make and record the payment.

Placing an Order

HINT

It's a good idea to enter an order into the Futura system as you are placing it with the vendor. In this way you can enter and/or verify pricing, quantity, and expected delivery, as well as any other information that you need to record.

1. Go to Payables►Orders to display the Order list (containing all orders you have entered into the Futura system).
 - Until you enter information for one or more vendors, "<None>" will be the only item in the list as shown below.

2. Click Insert to display the Order record.

3. Enter the appropriate information into the fields.

- *Several items can be placed on one order. However, only one vendor can be used per order.*
- *Please see "Order Record" on page A-38 for more information about the fields on this record.*

IMPORTANT!

It is important that you enter a value for this order. If you don't, when you purge orders to history, any order with a value of \$0 will be purged even if it is still open/pending. This means that it will be removed from your pending/open Orders list and added into Order History.

4. Add items to the order (see page 8-22).

5. Click Save to store this order in the system.

- *Repeat steps 2 through 4 for each order you want to place.*

NOTE:

You can print out the order for reference (see page 8-23).

Adding Products to the Order

From the Order record (see page “Placing an Order” on page 8-20):

The 'Order' window displays the following fields and controls:

- Company: [1] ABC Company
- Vendor: []
- Address: []
- City/Stat: []
- Sales: []
- Expect in: 0 Days (from Date of Order)
- Terms: []
- Shipped: []
- Note: []
- Vend Invc: []
- EO #: 5
- Date Ordered: 01/04/2003
- Date Ship: / /
- Tagable: ☐
- Track #: []
- Table with columns: Rev'd, Qty, Cost, Product
- Total Order: 0.00
- Buttons: Insert (circled in red), Edit, Delete, Full Receipt, Print P.O., Payments, Balance, Partial Receipt, Save, Cancel, Apply

1. Click Add/Insert to display the Order Entry window.

The 'Order Entry' window displays the following fields and controls:

- Qty: []
- Inv. Code: []
- Description: []
- Cost: 0.00
- Days: 0
- Vend ID: []
- Tagable: ☐
- Buttons: Save, Cancel

2. Enter the appropriate information into the fields.
 - Please see “Order Entry Record” on page A-41 for more information about the fields on this record.
3. Click Save to save this item on the order.
 - Repeat steps 1 through 3 for each item you want to include on the current order.

Printing a Copy of the Order

You can keep a “paper trail” of any orders you place by printing the “purchase order” (i.e., a copy of the order you just placed). You may also want to print a copy of this order so that you can take it into your stockroom when verifying orders (since it is unlikely you can or want to cart your computer into the room).

From the Order Record (see 8-21):

1. Click Print P.O. to display the current order in the Notepad format.

**NOTE:**

Although it is not advisable, you can make changes at this point directly into the Notepad version. However, once you make changes in this format, you will need to use the File ► Print option from within the Notepad function.

2. Click (in the upper right hand corner of the screen) to close the Notepad window.
 - A confirmation message will appear to ask you if you want to print now or not.

3. Click Yes to print the order.

Verifying Orders

Once you receive an order you have entered into the system, it is recommended as good practice that you always verify the order you placed (see “Printing a Copy of the Order” on page 8-23) with what you receive from the vendor.

NOTE:

If you are using a barcode scanner, this process will be more automatic.

1. Go to Payables►Orders to display the Order list (containing all orders you have entered into the Futura system).

Search:

Order #	Date	PO #	Vendor	Amount
1	01/04/03	PO# 11	Barnes International	60.00
1	01/04/03	PO# 10	Bio Orthopedics	36.00
1	01/04/03	PO# 9	Tried and True	1500.00
1	01/04/03	PO# 8	Bio Orthopedics	660.00
1	01/04/03	PO# 7	Tried and True	240.00
1	01/04/03	PO# 5	AI Prosthetic Supply	3600.00

<Search Completed>

Buttons: Insert, Edit, Delete, Duplicate

2. Double click on the order you want to verify to display the order record for that order.

Company: (1) ABC Company
 Vendor: Barnes International
 Address: 123 Main Street
 City/Stat: Seattle, WA
 Sales:
 Expect in: 35 Days (from Date of Order).
 Terms: 30 Days
 Shipped: USPS
 Note:
 Vend Invc: 020030104
 PO #: 11
 Date Ordered: 01/04/2003
 Date Ship: 02/11/2003
 Taxable: ☒
 Track #:

Rev'd	Qty	Cost	Product
12	24.00		stump socks
3	15.25		Lace up ankle gauntlet

Total Order: 333.75

Buttons: Insert, Edit, Delete, Full Receipt, Print P.O., Payments, Balance, Partial Receipt, Save, Cancel, Apply

3. Compare the order to what you received.
 - See “Order Record” on page A-38 for details about the information included in the order record.
 - See page 8-23 to find out how to print the order.

If you received all of an item you ordered:

From the Order record (see step 2 on page 8-24):

Order

Company: (1) ABC Company
 Vendor: Barnes International
 Address: 123 Main Street
 City/State: Seattle, WA
 Sales:
 Expect in: 35 Days (from Date of Order)
 Terms: 30 Days
 Shipped: USPS
 Note:
 Vend Invc: 020030104
 PO #: 11
 Date Ordered: 01/04/2003
 Date Ship: 02/11/2003
 Tagable: ☒
 Track #:
 Total Order: 333.75

Rev'd	Qty	Cost	Product
12	24.00	stump socks	
3	15.25	lace up ankle gauntlet	

Buttons: Insert, Edit, Delete, Full Receipt, Print P.O., Payments, Balance, Partial Receipt, Save, Cancel, Apply

1. Click on the item you received.
2. Click Full Receipt to acknowledge that you have received the entire quantity of an item ordered.
 - An asterisk will appear next to that item to designate that you have received the specified quantity.

If you only received part of the order:

It is not uncommon to receive only a partial order (e.g., if certain items are on backorder).

From the Order record (see step 2 on page 8-24):

The 'Order' window displays the following information:

- Company: (1) ABC Company
- Vendor: Barnes International
- Address: 123 Main Street
- City/State: Seattle, WA
- Vend Invc: 020030104
- PO #: 11
- Date Ordered: 01/04/2003
- Date Ship: 02/11/2003
- Expect in: 35 Days (from Date of Order)
- Terms: 30 Days
- Shipped: USPS
- Note:

Revd	Qty	Cost	Product
12	24.00		stump socks
3	15.25		Lace up ankle gauntlet

Total Order: 333.75

Buttons: Insert, Edit, Delete, Full Receipt, Print P.O., Payments, Balance, Partial Receipt, Save, Cancel, Apply.

1. Click on the item for which you only received part of the order (e.g., if you ordered 12 and only received 6).
2. Click Partial Receipt to display the Partial Receipt of Inventory window.

The 'Partial Receipt of Inventory' window shows:

- Total Qty Ordered: 12
- Inventory Received: 0

Buttons: Ok, Cancel.

3. Enter the actual number of the item receive (e.g., if you received 6 out of 12, you will enter the number 6).
4. Click OK to record the number and return to the Order record.
 - Not only will an asterisk appear next to the current item, but the number received will appear next to the item. In addition, the number of the item yet to receive will also appear in this list without an asterisk to designate that those remaining items have not been received.

Example:

Number received with asterisk to indicate receipt of those items.

Number of item not yet received with no asterisk to indicate that you are still waiting for those items.

Revd	Qty	Cost	Product
* 6	24.00		stump socks
* 3	15.25		Lace up ankle gauntlet
6	24.00		stump socks

Review the Balance of an Order and Payment History

You can easily review any balance you owe on any order entered in the system. In addition, you can then quickly review your payment history for reference and verification.

From the Order Record:

1. Click Balance to display the Order Balance window.
 - This window shows any monies (by aging) still owed on this order.

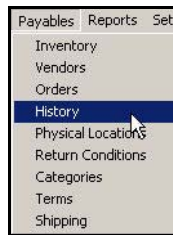

2. Click Payment History to display the list of AP Payments recorded in your system.

**NOTE:**

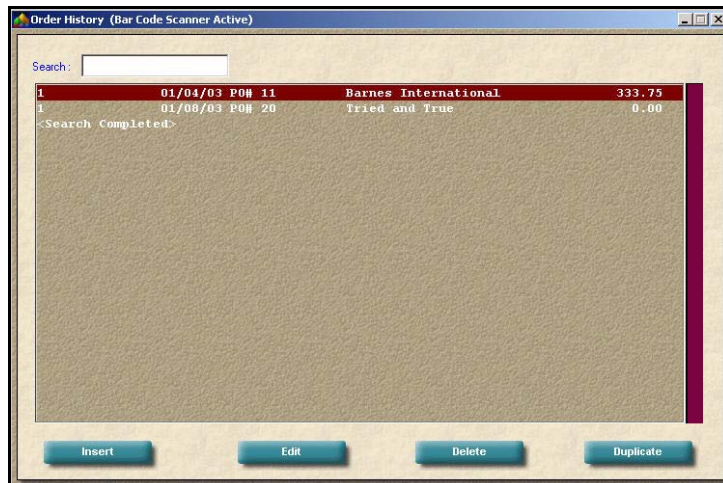

You can then double click on any payment in the list to review the information and status.

Review Order Histories

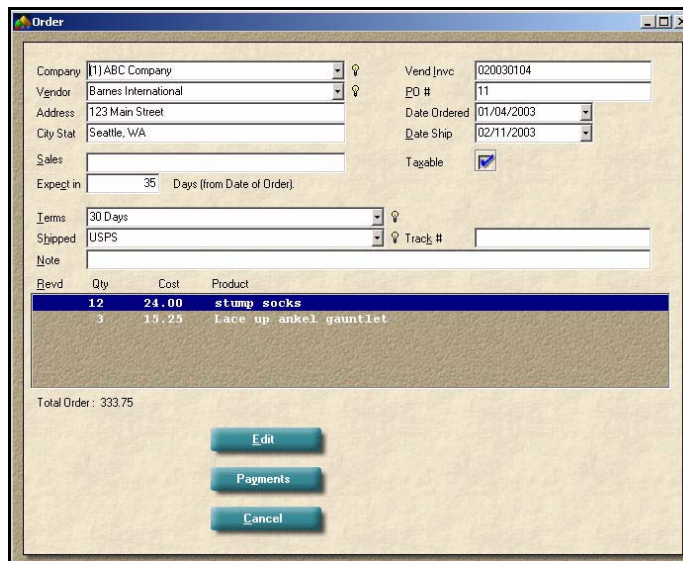

Once you have run the daily close and purged items to history, you will be able to see a history of orders entered in the system. From there, you can edit orders in history, if necessary, as well as review payment history.

1. Go to Payables►History to display the list of orders that have been purged to history.

2. Double click on the order you want to review to display the Order record.

NOTE:

You can now click on a line item, then click Edit to display the details about that item or click Payments to review any payment made on that item.

Making Payments to Vendors

Once you have received an order, you will, of course, need to make a payment to that vendor. The terms for payment to each vendor are specified when you enter the vendor information (see page 8-6 for more information).

1. Go to Payables►Orders to display the Order list (containing all orders you have entered into the Futura system).

The screenshot shows a window titled "Orders (Bar Code Scanner Active)". It contains a search bar at the top left. Below it is a table of orders with columns for a selection column, date, PO#, vendor name, and amount. The table lists several orders from Barnes International, Bio Orthopedics, and AI Prosthetic Supply. At the bottom of the window are four buttons: Insert, Edit, Delete, and Duplicate.

	Date	PO#	Vendor	Amount
1	01/04/03	PO# 11	Barnes International	60.00
1	01/04/03	PO# 10	Bio Orthopedics	36.00
1	01/04/03	PO# 9	Tried and True	1500.00
1	01/04/03	PO# 8	Bio Orthopedics	660.00
1	01/04/03	PO# 7	Tried and True	240.00
1	01/04/03	PO# 5	AI Prosthetic Supply	3600.00

2. Double click on the order for which you want to enter a payment.

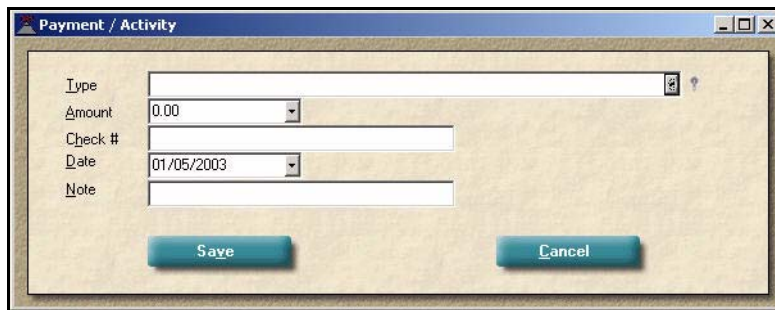

The screenshot shows a window titled "Order" with various fields for order details. Fields include Company (T1)ABC Company, Vendor (Barnes International), Address (123 Main Street), City/State (Seattle, WA), Sales, Expect in (35 Days), Terms (30 Days), Shipped (USPS), Vend Invc (020030104), PO # (11), Date Ordered (01/04/2003), Date Ship (02/11/2003), Taxable (checked), and Track #. Below these fields is a table of items with columns for Rev#, Qty, Cost, and Product. The table shows two items: "stump socks" and "Lace up ankle gauntlet". At the bottom left, it says "Total Order: 333.75". At the bottom right, there are several buttons: Insert, Edit, Delete, Full Receipt, Print P.O., Payments (circled in red), Balance, Partial Receipt, Save, Cancel, and Apply.

Rev#	Qty	Cost	Product
12		24.00	stump socks
3		15.25	Lace up ankle gauntlet

3. Click Payments to display the list of payments made on this order.
 - *Until you add one or more payments, nothing will appear in the list.*

4. Click Insert to display the Payment/Activity record.

5. Select a payment type (see page 8-31 for information about creating AP Payment Types).
6. Enter the amount of the current payment.
7. Enter a check number if a check is being used.

NOTE:

The date will automatically be filled in. However, if you need to change the date, you can.

8. Enter a note or description of this payment (e.g., partial payment, paid in full, etc.).
 - *This description will appear in the list of payments.*
9. Click Save to store the payment information for this order.

Creating AP Payment Types

While selecting a payment type as shown in “Making Payments to Vendors”, step 5 on page 8-27, is optional, it is recommended that you use this option. It can make tracking payments and GL maintenance much more accurate. It is also help to have payment types when running various Inventory Reports (see page 8-34). It also allows you to easily apply debits and credits to order payments.

**NOTE:**

Any AP payment types you create while in one order, will be available for all other order payments. In other words, the AP Payment Type list is the same for all order payments.

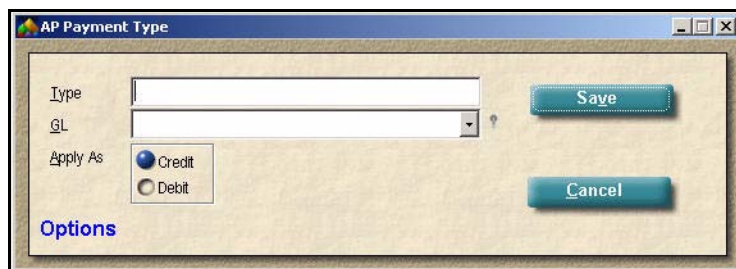

**IMPORTANT!**

The payment types used here (i.e., AP Payment Types) are completely different and separate from the Payment Types you set up for Receivables (as shown on page 5-75).

From the Payment/Activity record (see step 4 on page 8-30).

- Click the  next to the Type field to display the AP Payment Types list.
 - Until you create one or more payment types, “<None>” will appear in this list.

2. Click Insert to display the Payment Type record.

The image shows a software dialog box titled "AP Payment Type". It contains the following fields and controls:

- Type:** A text input field.
- GL:** A dropdown menu.
- Apply As:** Two radio buttons labeled "Credit" and "Debit". The "Credit" button is currently selected.
- Buttons:** "Save" and "Cancel" buttons are located on the right side.
- Options:** A blue hyperlink labeled "Options" is located at the bottom left.

3. Enter a description of the payment type (e.g., check for credit).
4. Select the appropriate GL from the list.
5. Select whether this payment type will be a credit or a debit.
6. Click Save to store this AP Payment type.

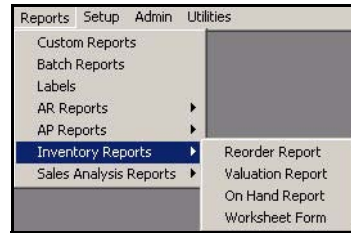

Provide Items to Patients (via Transactions)

Once you have entered vendors and inventory items, as well as placed and received orders, you can begin to disburse and charge inventory products to the patients. This process is made much easier if the product items and prices are associated with the HCPC codes (see “Add Commission Fees and/or Product Pricing to HCPC Codes” on page 4-27 and “HCPC Code option” on page A-12 for more information about this process). This simple process causes the following actions:

- **The charge to the insurance company and/or patient becomes automatic**
- **The disbursed product is automatically deducted from your inventory which makes inventory tracking quick and easy**
- **Payables and Receivables are much easier to reconcile**
- **Inventory and Claims reports are much more accurate**

Run Inventory Reports

You can run a variety of reports which provide you with information about your inventory:

- **Reorder Report**

This report gives you enough information about the inventory you are holding in stock so that you know what has and needs to be reordered. The information in this report consists of invoice numbers, available products, sold products, products on order, minimum and maximum quantities allowed (see “Inventory Product Record” on page A-33 for more information about how to set these quantities), as well as the maximum number of an item ordered.

- **Valuation Report**

You can use this report to find out how many of a product you have on hand, how many actual products you have, the unit measure of each item, as well as first-in-first-out and last-in-last-out information.

- **On Hand Report**

In this report, you can choose to include products that are not in stock, but still may be sold, how many you have on hand, how many sold, how many on order, the projected amount, and how many of the item are available.

- **Worksheet Form Report**

This report is a general, summary report that provides you with information on the number of an item you have available, how many sold, how many on order, and the true count of an item.

APPENDICES

What You'll Find In this Section:

- Page A-1 ■ Appendix A - Record Field Descriptions
- Page B-1 ■ Appendix B - Installation Guide
- Page B-1 ■ Appendix C - Claim Submission Reports

NOTES:

Appendix A - Record Field Descriptions

To help you understand how the tables work together and what information is requested in each record, the following table will provide you with the record name, then the field definitions (in alphabetical order) for that record. If tabs appear on a record, the field descriptions will be further organized according to the appropriate tab.

To find a description for a particular field, first find the name of the record (listed alphabetically here), then locate the tab label (if there is one), and/or find the field listed in alphabetical order.

How to read the this chart:

- **Field Label**
The field labels are used to identify and alphabetize the fields within the various records. The field labels are represented just as they are on each record (e.g. the same wording is used, so when you see the field label on the record, you can look for that exact label in this chart).
- **Field Description**
The description column gives you a basic idea of the purpose of the field and what sort of information should be entered.
- **Free Type**
If an X appears in this column for a corresponding field, you will need to type in (enter) the contents using the keyboard.
- **Select From Drop Down list**
If an X appears in this column, the information for the corresponding field can be obtained by clicking on the drop down list arrow, to display an associated list or window from which you can make a selection (e.g., when a calendar is attached).
- **Drop Down to Source Record**
If an X appears in this column, the information for the corresponding field can be obtained by clicking on the drop down arrow to display the associated list, from which you can choose a source item* (e.g., when entering a patient, you can specify the patient's referring physician by clicking on the drop down arrow to display the Physician list. From there you can choose the appropriate physician record for this patient).
- **Auto-fill from Another Source**
If an X appears in this column, it means that the information in the corresponding field will be automatically filled in - IF and ONLY IF it already exists in another related record or list (e.g., when creating a transaction, and you choose the patient's name, if you have completed the insurance information for the patient, it will automatically appear in the insurance section of the patient's). In most cases, the source of this information will be noted (e.g., will autofill from patient record).
- **Choose an option**
If an X appears in this column, it means that you will need to choose one or more of the options listed. This usually refers to a list of radio button or check box items.
- **Example**
For the most part, an example of the information that goes in the corresponding field will appear in this column to help further clarify the field description.

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Appointment Record

Please see “Scheduling Appointments” on page 5-8 for additional information

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
About	Select the appropriate HCPC code from the existing list*. This is an excellent use for appointment codes as described on page 4-24 of this guide.	X		X HCPC list*			• Appt0001: Initial evaluation. • Appt0204: 6 month follow up for orthotic fitting.

ID	This will auto-fill from the existing patient information.				Will auto-fill from patient record		• 12356 • 24568
Length	Enter the number of minutes required for this visit. You may also select the “All Day” option to block out the entire day for this appointment.	X	X Calculate or is associated to allow you to “pick” the number of minutes.				• 15 • 90

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Name	You can select the patient's name from the existing patient list*.	X		X Patient list*			- James Paul Fortino - Sally J. Reynolds
Options	Select one of these options as appropriate.					X	Choices are: Rescheduled No show Don't Print Confirmed Cancelled
Phone	Generally refers to the patient's home phone number, but can also be the best contact phone number (e.g., relative, neighbor, nurses desk, etc.). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X			X Will auto-fill from existing Patient record		- Number appears as: (410) 555-1034 (but was entered as 4105551034) - Number appears as: (714) 555-9876 (but was entered as 7145559876)
Social Security Number	It is important to include the patient's social security number as it will be the foundation of any claims you file on this patient's behalf. It is also another excellent way to specifically identify each patient. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -).	X			X Will auto-fill from existing Patient record		Number appears as: 111-22-3333 (but was entered as 111223333)
Work	Generally refers to the patient's work phone number. But can be used as an additional contact number if necessary.	X			X Will auto-fill from existing Patient record		- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

Attorney Record

Please see “Add Attorney Information” on page 4-23 for additional information.

NOTE:

All of the attorney information fields that you complete on this record will be used to auto-fill the corresponding fields on the participating patients' record and transactions for those patients.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Attorney's address This can be defined by your office, but is generally used to record the street address of the current attorney.	X					2050 62nd Avenue 12300 N. Central 452 Outlook Point Way
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					2050 62nd Avenue Suite 401 452 Outlook Point Way 16th Floor
Beeper	You can enter the attorney's pager number here (if applicable). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Cell	Refers to the attorney's cell phone number (if applicable). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
City, State, Zip	All apply to the attorney's address. The state must be entered as the standard 2 letter abbreviation	X					- Largo, MD 33625-1212 - Vallejo, CA 95714-4567
Email	If the attorney has an email address that you will or can use for sending correspondence, you can record it here.	X					- Gphillips@eastlaw.com - Marlenev@lawoffices.net

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
F ax	If the attorney has a fax number that you can use for sending correspondence, you can record it here. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Name	Enter the name of the attorney.	X					- George Phillips, Esq - Marlene Viviano, Esq
Phone 1	Generally refers to the attorney's main contact phone number (e.g. main office number). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-1034 (but was entered as 4105551034) - Number appears as: (714) 555-9876 (but was entered as 7145559876)
Phone 2	Generally refers to a secondary number for contacting the attorney (e.g., alternative office). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Billing Period Window (in a Rental Page)

Please refer to page “Create a Billing Table” on page 6-4 for additional information. Also see pages A-9, A-67, and A-83 for more information about various fields you will find when creating a rental page.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Standard Rental							
%Adjust Allowed	This field allows you to apply an adjustment to the current standard rental allowed charge.	X					This is generally pre-arranged via a contract agreement with the insurance to provide a discount on the allowable charge. This adjustment will then remain in tact for the life of this rental page.
%Adjust UC	This field allows you to apply an adjustment to the current standard rental allowed charge.	X					This is generally pre-arranged via a contract agreement with the insurance to provide a discount on the usual and customary charge. This adjustment will then remain in tact for the life of this rental page.
From	Allows you to specify the number increments of time selected for the standard rental billing cycles	X					Billing for a wheelchair is to be “From” month 1 “To” 999” (i.e., until the patient cancels the rental or purchases the item).
Interval	Allows you to specify the frequency of billings to be generated for this rental.	X					You want to bill for a 90 day supply of syringes. Therefore, your interval would be 3 months (90 days).
Mod 1-3	You will need to select the appropriate insurance specified modifiers for the standard DME rental. These are generally used for capped rental transactions. You can also change modifiers for each billing period.			X Select from Modifier list.*			- KH - initial claim - MS - maintenance service field
Skip Every	This is used in conjunction with the Interval field as described above.	X					You want to bill for a 90 day supply of syringes, but they come in cases containing a 45 day supply. Therefore, your interval would be 3 months (90 days), but you want to skip every 3rd month (interval).

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
To	See “From” above.	X					• See “From” above.
Capped Rental (applies to Medicare Only)							
%Adjust Allowed	This field allows you to apply an adjustment to the current capped rental allowed charge.	X					• The patient will receive an adjustment of 25% below the standard allowable charge from the 4th to the 15th month. This adjustment will then remain in tact until the cap is reached.
%Adjust UC	This field allows you to apply an adjustment to the current capped rental allowed charge.	X					• The patient will receive an adjustment of 25% below the standard allowable charge from the 4th to the 15th month. This adjustment will then remain in tact for the life of this rental page.
From/To	Allows you to specify the number increments of time selected for the capped rental billing cycles	X					• Billing is to be “From” month 1 “To” 4”.
Insurance Type Required for	Select the insurance that requires a merge letter for this billing period.					X	• Choices are: Medicare Medicaid Champus Champ VA Group Health Plan FECA Black Lung Other All
Interval	Allows you to specify the frequency of billings to be generated for this rental.	X					• You want to bill for a 90 day supply of syringes. Therefore, your interval would be 3 months (90 days).
Letter Required	You can use this option to designate whether or not a letter is required at the end of the rental period. The letter is defined by the “Insurance Type Required for” field as previously described.	X					• At the end of the 10th rental month, you need to let the patient know that the insurance is capped out, and that he/she needs to decide whether he/she wants to purchase the item, return it, or continue renting.

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Merge Letter	You can browse and select the appropriate required letter as designated by the above option.		X Select from the browser window that appears.*				This may be something like a letter offering the patient the option to continue to rent an item or convert the rental to a purchase.
Mod 1-3	You will need to select the appropriate insurance specified capped DME rental modifier(s). These modifiers help create a pattern for billing. They define the status of the current billing (e.g., initial claim, maintenance, etc.)			X Select from Modifier list.*			- KH - initial claim - MS - maintenance service field
To	See "From/To" above.	X					Billing is to be "From" month 1 "To" 4".

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Billing Table Window (in a Rental Page)

Please refer to page “Create a Billing Table” on page 6-4 for additional information. Also see pages A-6, A-67, and A-83 for more information about various fields you will find when creating a rental page.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Apply Time As	Select the billing cycle you want to apply to this rental page.					X	- Choices are: - Hourly - Daily - Monthly
Catch up Billing to start of month	Select this option if you want any interruption in billing to be caught up at the beginning of the month					X	
Description	Enter a brief but clear description of the type of billing that will be applied to this rental page.	X					- Standard Monthly Rental - Monthly Supply Order
Service Date Cycle	Select at what point of the billing cycle you want billing to be processed					X	- Choices are: - Bill at Beginning - Bill at End (e.g., Bill at the end of the monthly billing cycle).
Std Frm to M1 M2 M3 Capped Frm to M1 M2 M3	You can create and add billing periods for standard billing as well as for capped billing. See page “Billing Table Window (in a Rental Page)” on page A-9 for more information about the fields that appear there.			X			
Total Entered	The total number of billing periods will automatically appear here.				X		

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Call Log (Pending Call) Record

Please see “Logging Pending Calls” on page 5-18 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Beeper	This refers to the caller's cell beeper number, specifically the one at which the recipient may contact the caller.	X				X Will auto-fill from the master list.* See page 5-19.	- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Caller	As this implies, this will be the name of the person who has called for the employee. You can free type or select the caller from the master list.	X	X Select from the master list.* See page 5-19.				Mr. Timmons (patient) Dr. Ballantyne (physician) A & D Medical (vendor)
Cell	This refers to the caller's cell phone, specifically the one at which the recipient may contact the caller.	X				X Will auto-fill from the master list.* See page 5-19.	- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
For	Indicates for whom the call was received		X Select from Employee list.*				- Sylvia Gonzales - Toni Sheppard
Note	Enter any message or other information left by the caller.	X					- Mr. Timmons has questions about his prosthesis. Having trouble with skin irritation. - Dr. B wants to know if you are free for lunch tomorrow. - Vendor says shipment will be delayed.

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Options	Select from any of these options to add more information for the recipient of the caller.					X	- Choices are: - Called - Returned your call - Faxed - Please call back - Will call again - Please fax back - Wants to see you - Came to see you - Dropped something off - Picked something up
Phone	This refers to the caller's phone, specifically the one at which the recipient may contact the caller.	X				X Will auto-fill from the master list.* See page 5-19.	- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Type of Caller	This is generally used to further define and clarify the nature of the caller's business with the recipient.	X				X Will auto-fill from the master list.* See page 5-19.	- Patient - Physician - Vendor

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Code Record

Please see “Create Procedure Codes” on page 4-24 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
HCPC Code option							
Category	Select the appropriate HCPC category that applies to this new code from the existing category table.			X Category list*			• AFO • TLSO • Orthotic • Prosthetic
Code	Enter an identifiable code for this procedure.	X					• Appt1001 • L9999
Color	You can choose a color to give visual definition to this specific code, if using the appointment viewer (see page A-2).					X	• You may choose yellow to indicate an initial patient evaluation • You may choose green if this code applies to a particular specialist.
Description	Define what the code represents	X					• Initial patient evaluation with specialist.
Diagnosis (button)	Used to set parameters (a range of codes) as to what diagnoses are appropriate or suggested for the specified HCPC code. When billing for a procedure code, it is recommended that you include this range of codes for efficiency and accuracy. This setting allows the coding to be validated per your settings, which helps prevent any coding errors.		X				• Create a code to be used on a diagnosis code range of 109.8 to 115.2
Drug Code (DME option only)	If the code you are adding is associated with a drug of some kind, you can enter the appropriate code here.	X					
GL (general ledger codes)	Select the appropriate code from the existing general ledger code list*.			X General Ledger Code list*			

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Min K	Minimum K level (or level of ambulation) is required for successful billing and reimbursement of a particular code. However, if ambulation is less than the minimum level allowed, you may or may not receive payment. Completing this field does not guarantee payment. Insurance companies vary on this requirement.	X					Enter 2 since the associated insurance company will only pay if patient is K2 or higher.
Modifier (button)	Use this option to set modifier restrictions. When billing for a procedure code, it is recommended that you include this range of modifiers for efficiency and accuracy. This setting allows the modifiers you enter in the modifier field to be validated per your settings, which helps prevent any coding errors.			X Modifier list*			- For O&P codes, enter LT, RT, K3 so that this code can only be used for these modifiers. - For DME codes, enter RP, MS, ZY so that this code can only be used for these modifiers.
Modifiers	Select any related modifiers for this code from the existing Modifier list*. NOTE: Modifier fields will change depending upon whether the O&P or DME option is selected at the top of the Procedure Code record.			X Modifier list*			- LT, RT, K3 only can be used here for O&P services since the modifier restrictions have been set with these parameters (see Modifier button definition above). - RP, MS, ZY can be used here for DME business since the modifier restrictions have been set with these parameters (see Modifier button definition above)
Oral Cancer Drug (DME option only)	If you have entered a Drug Code, you can use this option to designate whether or not the drug is an oral cancer drug.						

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
POS	Place of Service (required by Medicare). This field represents the location at which the patient is utilizing a device or item supplied by your office.	X					11 - Office: other than a hospital, SNF, or ICF, where the health professional routinely provides health care, diagnosis, and treatment of illness or injury on an ambulatory basis. 12 - Patient's Home (and is the default) 31 - Skilled Nursing Facility
Time in minutes for appointment	If you are using this code as an appointment code, enter the number of minutes that the related visit is expected to last. When you use this code to set an appointment in the Appointment Viewer, the number of minutes specified here will be the default appointment length that appears for that appointment.	X					90 minutes may be an appropriate time to set aside for an initial patient evaluation.
TOS	Type of Service Predetermined by various payors.	X					9 = Purchase 4 = In office procedure
Type of Code	If you are creating a code other than an appointment code (i.e., an O&P or DME code), you can designate the nature of the code by selecting the O&P or DME option at the top of the page. Switching from one type of code to another will also change the appearance of the record (including differing fields).						- O&P - Orthotics and Prosthetics - DME - Durable Medical Equipment

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Employee Record

Please see “Add Employees” on page 4-7 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
							
Address 1	Employee's address This can be defined by your office, but is generally used to record the street address of the current employee.	X					• 6001 Talister Court • 30 E. Broadway Street • 10251 NW Spring Road
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					• Talister Court Apartment 205 • 10251 NW Spring Road Room 34A
Beeper	You can enter the employee's pager number here (if applicable). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
City, State, Zip	All apply to the employee's address. The state must be entered as the standard 2 letter abbreviation	X					• Largo, MD 33625-1212 • Vallejo, CA 95714-4567
DOB	Enter the date of birth for this employee	X	X Calendar is associated to allow you to "pick" the date				• Date appears as: 1/23/1952 (but was entered as 1231952) • Date appears as: 10/7/1971 (but was entered as 1071971)
Employee Type	Select the situation under which this employee works for your company.					X	• Choices are: • Hourly • Salaried • Contractual

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Evaluate every	Enter the number of times this employee should be evaluated within a specified amount of time. Enter the specified amount of time the employee should receive his/her evaluation.	X					- twice (per year) - once (every month)
Hire Date	Enter the date upon which the employee was hired by your company. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -).	X	X Calendar is associated to allow you to "pick" the date				- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)
Last reviewed	Enter the date of the employee's most recent review	X	X Calendar is associated to allow you to "pick" the date				- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)
Leave Date	If employment was terminated by this person, enter the last day worked. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -).	X	X Calendar is associated to allow you to "pick" the date				- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)
Leave status	If employment was terminated, select the reason for the termination.					X	Choices are: Voluntary Fired
Max hours per	Enter the maximum number of hours this employee will be working for your company. Enter the increment in which this employee's maximum work hours will be gauged	X					40 (per week) 80 (per month)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO- FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Min hours per	Enter the minimum number of hours this employee will be working for your company. Enter the increment in which this employee's minimum work hours will be gauged.	X					• 40 (per week) • 60 (per month)
Name	Enter the name of the employee	X					• Sylvia Gonzales • Sharon Freeman
Phone	Enter the phone number of the employee's emergency contact. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
Raise	If the employee has received a raise, enter the amount of the most recent increase.	X					•
Rate per	Enter the dollar amount (rate) paid to the employee Enter the increment in which this employee's rate of pay will be applied	X					• \$10 per hour • \$68,000 per year
Rehire	Indicate whether or not you would rehire this employee, and if so, if the rehire would be conditional.					X	•
Social Security Number	It is important to include the employee's social security number as it will be the foundation of any salary or payment your company makes to him/her. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -).	X					• Number appears as: 111-22-3333 (but was entered as 111223333)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
							
Special	You have the opportunity to list anything special about this employee as appropriate.	X					- Bilingual in Spanish and English - Specializes in pediatric orthotics
Work	Enter the work phone number of the employee's emergency contact. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Emergency option							
Contact name	Enter the name of the person the employee has specified should be contacted in case of emergency	X					- Mildred Krebs - Eric Gonzales
Contact's Relationship	For clarification, enter the relationship the emergency contact has with regard to the employee	X					- Mother - Husband

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Facilities Record

Please see “Add Facilities” on page 4-8 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Patient Location option							
Address 1	Facility address This can be defined by your office, but is generally used to record the street address of the current facility.	X					2050 62nd Avenue 12300 N. Central 452 Outlook Point Way
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					2050 62nd Avenue Suite 401 452 Outlook Point Way 16th Floor
City, State, Zip	All apply to the facility address. The state must be entered as the standard 2 letter abbreviation	X					- Largo, MD 33625-1212 - Vallejo, CA 95714-4567
Contact	Generally, this may refer to a specific person or group of people (department) that you speak to when contacting this facility.	X					- Joyce Smythe - Admissions office
Department	This can be used to refer to a specific department with which you typically are in contact.	X					- Rehabilitation - Orthopedic Surgery
Email	If the facility has an email address that you will or can use for sending correspondence, you can record it here.	X					- jsmythe@domain.com - admissions@facility.net
Facility	You can select the type of facility this is from the existing list* of facility types.			X Facility Type list*			- ABC Orthopedic Center - Western Medical Center

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
							
Fax	If you will be using a fax for sending correspondence to this facility, you can record it here. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
HCFA – 1500 Block 32 compliant	You can use this field if you want the HCFA form to reflect the actual place of service (POS) by printing in block 32 of the form. This will print the name and address of the location in which you provided the service outside of your office.					X	
Initial Visit	This is used as a tracking date to log the original visit the made to this facility. It can also be used in combination with the Next and Last visit dates to track sales representatives and the frequency of their visits to the facility.	X	X Calendar is associated to allow you to "pick" the date				- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)
Last Visit	This represents the most recent (previous) date on which the specialist (or sales person) is scheduled to visit the facility. It can also be used in combination with the Initial and Next Visit dates to track sales representatives and the frequency of their visits to the facility.	X	X Calendar is associated to allow you to "pick" the date				- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)
Name	This refers to the name of the location	X					- Western Medical Center - Olive Grove Nursing Home

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Next Visit	This represents the next date on which specialist (or sales person) is scheduled to visit the facility. It can also be used in combination with the Initial and Last Visit dates to track sales representatives and the frequency of their visits to the facility.	X	X Calendar is associated to allow you to "pick" the date				• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)
Phone 1	Generally refers to the facility's main contact phone number (e.g. direct line to a specific contact). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-1034 (but was entered as 4105551034) • Number appears as: (714) 555-9876 (but was entered as 7145559876)
Phone 2	Generally refers to a secondary number for contacting the facility (e.g., main switchboard). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
POS	Place of Service (required by Medicare). This field represents the location at which the patient is utilizing a device or item supplied by the physician.	X					• 11 - Office: other than a hospital, SNF, or ICF, where the health professional routinely provides health care, diagnosis, and treatment of illness or injury on an ambulatory basis. • 12 - Patient's Home (and is the default) • 31 - Skilled Nursing Facility
Specialist	Select the name of the specialist that is most commonly associated with this facility from the existing Specialist list*.			X Specialist list*			• Sylvia Gonzalez • Sharon Freeman

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Outside/Lab Facility option							
Address 1	Facility address This can be defined by your office, but is generally used to record the street address of the current facility.	X					2050 62nd Avenue 12300 N. Central 452 Outlook Point Way
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					2050 62nd Avenue - Suite 401 452 Outlook Point Way 16th Floor
City, State, Zip	All apply to the facility address. The state must be entered as the standard 2 letter abbreviation	X					- Largo, MD 33625-1212 - Vallejo, CA 95714-4567
Contact	Generally, this may refer to a specific person or group of people (department) that you speak to when contacting this facility.	X					- Seth Gray - On call Technician
Department	This can be used to refer to a specific department with which you typically are in contact.	X					- TCU Therapy Clinic - Short Term Rehab
Email	If the facility has an email address that you will or can use for sending correspondence, you can record it here.	X					- sgray@qoa.com - tech@facility.net

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
ID	This field is available for your company to define. It can be used to record some identifiable information about a particular facility for your use and/or reference.	X					One identifier you may want to enter is the state license number of a nursing facility.
Name	This refers to the name of the lab or other facility	X					- Labquest of America - Marimount Rehab Center
Phone	Generally refers to the facility's main contact phone number (e.g. direct line to a specific contact). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-1034 (but was entered as 4105551034) - Number appears as: (714) 555-9876 (but was entered as 7145559876)

HCPC Commission Schedule Record

Please see “Add Commission Fees and/or Product Pricing to HCPC Codes” on page 4-27 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Commission Amount	Based on the commission type, you can specify the amount of commission to be paid on this HCPC item or service code	X					1% \$2.00 - Choices are: Percent Fixed Amount
Commission Type	Allows you to specify how commission will be paid (i.e., flat fee, percentage of what has been billed).					X	1% of the total items billed for the last 30 days. \$2.00 on every item sold - Choices are: No commission is available Commission is percentage of billed Commission is fixed amount
Days to Delay	If you choose to delay payment on this code, you will need to specify the number of days you want to postpone the payment.	X					15
Delay Payments	Select this to have the system postpone any payment to the sales rep/ specialist on this particular HCPC code.					X	

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Insurance Record

Please see “Add Insurance Companies” on page 4-11 for additional information

NOTE:

All of the insurance fields that you complete on this record will be used to auto-fill the corresponding fields on the participating patients’ record and transactions for those patients.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Address of the insurance company. This can be defined by your office, but is generally used to record the street address of the insurance company.	X					• 3600 Pullman Avenue • 10432 Euclid Lane • 72 98th Street
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					• 3600 Pullman Avenue Building D, Claims • 72 98th Street Disability Claims Department
City, State, Zip	All apply to the insurance company’s address. The state must be entered as the standard 2 letter abbreviation	X					• Clearwater, FL 33762 • Costa Mesa, CA 92626 • New York City, NY 01221
Contact	This can be either a specific person or a department within this insurance company. It mainly represents the person or group of people to whom you should address correspondence and phone calls. You can include an extension number as applicable.	X					• Major Claims Division, ext 210 • Hillary Archer, Claims Rep
Deductible	Enter the basic deductible this insurance company requires a patient to pay, if any. NOTE: <i>This is informational only and does not carry over to transactions.</i>	X					• \$15 (per visit) • \$500 (per year)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Email	You can enter the email address for a contact person or department at the insurance company. This can allow you to easily send claims and other correspondence as pre-arranged with the insurance company. Once you have entered the email address, you can click on the email icon to open a blank email message, then begin typing the correspondence.	X					- claimsmanager@goldstar.net - hillarya@epicins.com
Fax	Allows you to record the fax number of the contact person or department with which you may be corresponding. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					Number appears as: (410) 555-0001 (but was entered as 4105550001)
Fee Level	Select the appropriate fee level from the existing list*. If this field is left blank, it will default to the fee level you specified as your company default (e.g., usual and customary). However, if by some chance you have not specified a fee level default for your company, and the fee level on the Insurance record is left blank, you will be prompted to select a fee level for service when you create a transaction.			X Fee Category list*			- Medicare - U/C - Medicare - 20% - Medicaid/Medical - Humana Contract
Group ID	This information will either be supplied to you by the insurance company (who will specify if it is needed) and/or it will appear on the patient's health card. It is another basic method of identification defined and used by an insurance company to track patient's and claims.	X					- GR45897 189C43

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Ins ID	You can either assign/enter an ID using an established method for your company or the system will automatically assign it for you. This helps to prevent confusing two patients with the same first and last name.	X					• BCBS (i.e., Blue Cross/Blue Shield) • CIG (i.e., CIGNA)
Name	Enter the name of the insurance company	X					• Blue Cross/Blue Shield) • CIGNA • Medicaid • Medical
OCNA (Other Carrier Name and Address)	This field is necessary for all insurance companies that support electronic crossovers from Medicare. It is Medicare that issues this number. If you are a participating Medicare provider, then Medicare will or has issued you a list of OCNA numbers for automatic electronic crossover. NOTE: Generally, if you enter an OCNA number, you will also need to select the Pays Medigap option under Insurance Options.	X					• Usually a number 7 digits in length.
Pay %	You can enter the basic percentage that this insurance company will cover of any claim received by your company. It is recommended that you leave this blank or at 0 (zero) unless this specific insurance company will ALWAYS pay a certain percent. This is especially true for negotiated contracts.	X					• 20%, • 80% • 100%

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Payor ID	This information is generally only used if you are using the Envoy system for electronic claim filing. This number is specific to an insurance company and is used when a claim is submitted in order to ensure accuracy. The number can be found in the Envoy payor lists	X					
Payor Office ID	This information is generally only used if you are using the Envoy system for electronic claim filing. This ID will be assigned by the insurance company. However, be aware that not all insurance companies use office ID. Generally, this ID is used to differentiate one insurance company branch from another. If no Office ID has been assigned, it is safe to leave this field blank.	X					
Phone 1	Generally refers to the specified contact's number or the main number for the insurance company. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					- Number appears as: (410) 555-1034 (but was entered as 4105551034) - Number appears as: (714) 555-9876 (but was entered as 7145559876)
Phone 2	Generally refers to a secondary number for the insurance company (perhaps a secondary contact).	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Physician ID	This field allows you to specify which physician ID number is necessary for submission to the current insurance company/payor. Some payors such as Medicare may assign and require the specific UPIN to appear on a claim.					X	Choices are: UPIN (universal provider identification number) PIN Group # Other ID 1 Other ID 2
Plan Code	This information is generally only used if you are using the Envoy system for electronic claim filing. This number will be provided to you by the insurance company, and generally only is used by BCBS.	X					
Provider ID (button)	This number is assigned to the provider by the insurance company. You only need to use this number if/when you do not use your Tax ID. And, if you have a Tax ID in your company setup, and you have left this Provider ID field blank, the system will automatically default to the stored company tax ID. This number references the provider and any agreements you may have with the insurance company/payor.			X Provider ID list*			\

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Insurance Options							
Options	Allows you to specify the current situation of this insurance company in relation to your office. It also provides a way to create a report allowing you to specifically group your payors by any of these options (e.g., a report for all HMO's or BCBS payors). If you have hundreds of these types of insurance companies, but want a way to group them, this is an efficient way to do so.					X	- Choices are: - Accept Assignment - Pays Medigap - BC - BCBS - Central Cert - Federal Employees - Federal Other - HMO - Managed Care – non HMO - Self Administered - Title V - United Health - VA Plan - Workers Comp - PPO - Commercial
Insurance Type	This information appears on the top of an HCFA form and you can specify it here as well. In addition, Futura will default this field to the “other” option if you do not select one of the other choices.					X	- Choices are: - Medicare - Medicaid - Champus - Champ VA - Group Health Plan - FECA Black Lung - Other

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Insurance Form Record

Please see “Adding Insurance Forms” on page 4-13 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Submitter address This can be defined by your office, but is generally used to record the street address of the submitter associated to the submitter ID.	X					• 2050 62nd Avenue • 12300 N. Central • 452 Outlook Point Way
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					• 2050 62nd Avenue Suite 401 • 452 Outlook Point Way 16th Floor
City, State, Zip	All apply to the submitter's address. The state must be entered as the standard 2 letter abbreviation	X					• Largo, MD 33625-1212 • Vallejo, CA 95714-4567
Company	Your own company name. This will generally be auto-filled when you open the record. However, if you have more than one company name registered with Futura, you will be able to select from the various registered company names.				X Company list predefined at installation.		• ABC COMPANY INC.
Contact	Enter the name of the main point of contact at the submitter company.	X					• Nancy Heldt • Hillary Archer
Elec. Clm	Select the form you want to use to submit electronic claims to the associated insurance company.			X Insurance Form list.*			
Elig. Req	Select the form you want to use as the eligibility request form for the associated insurance company.			X Insurance Form list.*			

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Options	Select the appropriate options for this form.					X	• <i>Print a hard copy (when you use the form)</i> • <i>Bundle Like Codes (organize information on the form according to codes)</i> • <i>Requires Override</i> • <i>Production Approved (must be checked when you pass EMC testing)</i> • <i>ENVOY Par Provider (must be checked if the payor is a participating provider with ENVOY)</i>
P. Auth.	Select the form you want to use as a preauthorization form for the associated insurance company.			X Insurance Form list.*			
Paper Clm	Select the form you want to use to submit paper claims to the associated insurance company.			X Insurance Form list.*			
Paper Elig	Select the form you want to use as the paper eligibility form for the associated insurance company.			X Insurance Form list.*			
Password	Enter the information that is provided to you by the carrier and must be used when submitting claims.	X					
Phone	Enter the submitter company phone number.	X					• <i>Number appears as: (410) 555-1034 (but was entered as 4105551034)</i> • <i>Number appears as: (714) 555-9876 (but was entered as 7145559876)</i>
Submitter ID	Enter the information that is provided to you by the carrier and must be used when submitting claims.	X					
Submitter Name	Enter the company name to which the submitter ID is assigned.	X					

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Inventory Product Record

Please see “Setting Up Products and Pricing” on page 8-11 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Category	Select the appropriate category for this item.			X Select from Category list.*			• Prosthetic soft good • Diabetic supply
Description	Enter an appropriate description for the product being added to the inventory.	X					• Lace up ankle gauntlet • Stump socks
GL	Select the general ledger account that you want to associate with this item.			X Select from General Ledger list.*			0100 - Sales 0200 - Cost of Goods
HCPC	Select the HCPC code that should be associated with this item. This field is very important for your own billing and claims purposes, as it allows you to automatically associate a price with the HCPC code. NOTE: <i>More than one item may be associated with the same HCPC code.</i>			X Select from HCPC Code list.*			• L8420
Inv. Code	You should have an established inventory code system. Therefore, enter the appropriate inventory code for this item. If you are using a bar scanner, this information will be the same as the vendor ID.	X					• ASO-XS-8001-L19 • SS23467
Item Detail Area	You can add very specific details about the item you are currently entering into inventory (via the Insert button - see “Master Discrete Inventory (Adding Detail to Inventory Items)” on page A-36).						• purchase date • serial number • location

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Max Units	Enter the maximum number of units that should be in inventory. This information is very important so that you don't over order items for your inventory. "Run Inventory Reports" on page 8-34 for more information.	X					
Min Units	Enter the minimum number of units that should be (on hand) in inventory. This is a VERY important field to complete as it is used by the system when generating a re-order report. If this field has not been completed, the system will not know when it needs to be reordered. Therefore, it will not appear in the reorder report. When the number of items has gone to or below this number, the system will add it to the reorder report when it is run. "Run Inventory Reports" on page 8-34 for more information.	X					
Prime Vendor	Select the vendor from which you will usually purchase this item.	X		X Select from Vendor list.*			• 1 • 6
Retail Price	Enter the price at which you will sell this item to your patients.	X					• 29.95 • 123.45

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Unit of Measure	The base unit by which an item is normally stocked, costed and ordered.	X					• <i>each</i> • <i>box</i> • <i>set</i> • <i>dozen</i>

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Master Discrete Inventory (Adding Detail to Inventory Items)

Please refer to page “Associating Vendors with Specific Inventory Items” on page 8-15 for additional information

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Bin	This field can be used in conjunction with the location, shelf, and section information to further detail where and how this item is stored.						1A 202
Cost	Enter the average price you pay for this item from a vendor.	X					5.00 12.00
Inv. Code	You should have an established inventory code system. Therefore, enter the appropriate inventory code for this item. If you entered this information on the main Inventory Product record (see page “Inventory Product Record” on page A-33), it will automatically appear here.	X			X Will auto-fill from Inventory Product record.		- ASO-XS-8001-L19 - SS23467
Location	Select the physical location at which this item is stored. You can also further detail this location by adding shelf, section, and bin information.			Select from Vendor list.*			- Stock room 1 - South Street office
Notes	Enter any appropriate notes for this item.						- Do not order this item from A1 in the future. - Use this item before those purchased on or after 01/25/003.
Purchased	Enter the date on which this current item was purchased.	X	X Calendar is associated to allow you to “pick” the date				- Date appears as: 1/23/2003 (but was entered as 1232003) - Date appears as: 10/7/2002 (but was entered as 1072002)
Qty	Enter the actual number of items in your physical inventory.	X					2 10

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Section	This field can be used in conjunction with the location, shelf, and bin information to further detail where and how this item is stored.						• 1A • 202
Serial #	Enter the serial number of this item.						
Shelf	This field can be used in conjunction with the location, section, and bin information to further detail where and how this item is stored.						• 1A • 202
Status	You can select the Rental Item In, Rental Item Out, or the Not Applicable option as a reference if this item is used for rentals to patients (e.g., wheelchair).						
Vendor	Select the name of the vendor from whom this item was purchase.			X Select from Vendor list.*			• <i>purchase date</i> • <i>serial number</i> • <i>location</i>

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

Order Record

Please see “Placing an Order” on page 8-20 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Vendor's address This can be defined by your office, but is generally used to record the street address of the current vendor. This is also the address to which you will payments.				X Will auto-fill from existing Vendor record		• 2050 62nd Avenue • 12300 N. Central • 452 Outlook Point Way
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.				X Will auto-fill from existing Vendor record.		• 2050 62nd Avenue Suite 401 • 452 Outlook Point Way 16th Floor
City, State, Zip	All apply to the vendor's address. The state must be entered as the standard 2 letter abbreviation				X Will auto-fill from existing Vendor record.		• Largo, MD 33625-1212 • Vallejo, CA 95714-4567
Date Ordered	The system will automatically fill this field with the current date. However, you can change the date if necessary.		X Calendar is associated to allow you to “pick” the date”		X Will be auto-filled by system		
Date Ship	Enter the date of expected shipment. You can return to this record and change this date upon receipt of your order. In this way, you can monitor how long vendors take to ship orders.	X	X Calendar is associated to allow you to “pick” the date”				• Date appears as: 1/23/2003 (but was entered as 1232003) • Date appears as: 10/7/2002 (but was entered as 1072002)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Expect in	This refers to the number of days (from the date of your order) it will take for the vendor to ship your orders. If you have entered a number in the Dlvvy Days field in the vendor record, this number will be auto-filled. However, this number may vary by item and day of the order, etc. (i.e., an order placed on Friday will not be shipped until Monday, while an order placed on Monday morning will go out the same day).	X			X Will auto-fill from existing Vendor record.		1 day 7 days
Note	Enter a short note regarding this order	X					- Call back tomorrow to confirm shipment date. - Items will be delayed by 4 days due to mfg equipment breakdown.
Ordered Items area	The items you order (via the Insert button - see "Order Entry Record" on page A-41) will appear in this area.						
PO#	While the system automatically entered a purchase order number here, you can always change it for this order.				X Will be auto-assigned by system		
Sales	Enter the name of the person with whom you have placed the order. It is always a good idea to record this information, especially if it is someone other than your regular contact. It may help with follow up questions or issues about your order.	X			X Will auto-fill from existing "Contact 1" field in Vendor record.*		- Lien Frey - David Page
Shipped	While this field will be auto-filled from the vendor record, you can change the type of shipping that the vendor will use for this order.				X Select from Shipping Types list.*		- Direct Delivery - USPS Priority - UPS 2nd Day

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Taxable	Select this item if the items on this order are for resale, indicating that the vendor should not include tax on this bill.					X	
Terms	While this field will be auto-filled from the vendor record, you can change the terms for this individual order.				X Will auto-fill from Vendor record.*		• 30 days • 10 day discount
Vendor Invc	Once you receive a bill (invoice) for this order, you can enter the number here.	X					• tt021303-101

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Order Entry Record

Please see “Adding Products to the Order” on page 8-22 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Cost	It is a good idea to obtain and confirm pricing for each item you order as this may change depending upon current rates or quantities. If this price has been entered into the Inventory Product record for this item it will auto-fill this field. However, it is still recommended that you confirm this price for the current order. IMPORTANT! <i>It is important that you enter a value for this order. If you don't, when you purge orders to history, any order with a value of \$0 will be purged even if it is still open/pending. This means that it will be removed from your pending/open Orders list and added into Order History.</i>				X Will auto-fill from Inventory Product record.		• 12.75 • 5.00
Days	Enter the number of days it is estimated for this item to be shipped.	X					• 12 • 30
Description	Once you select the inventory code as described below, the description will be filled in from your inventory list.				X Will auto-fill from Inventory Product record.		• <i>Lace up ankle gauntlet</i> • <i>Stump socks</i>

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Inv. Code	Select the appropriate product from your inventory list. If the item has not been entered into your inventory, it is recommended that you add it now (see page “Setting Up Products and Pricing” on page 8-11).			X Select from Inventory Product list.*			• ASO-XS-8001-L19 • SS23467
Qty	Enter the quantity of the current item you are ordering	X					• 1 • 6
Taxable	Select this item if the items on this order are for resale, indicating that the vendor should not include tax on this bill.					X	
Vendor ID	Enter the ID that the vendor uses for this item. If you are using a bar scanner, this information will be filled in. If you have entered this information in the Selling Vendor record for this item, it will automatically appear in this field.	X			X Will auto-fill from Selling Vendor record for this item (see page “Selling Vendor Record” on page A-86)t.		• 078-ag-lu-9800 • tt34678a-ss

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Patient Record

Please see “Add a New Patient to the System” on page 5-32 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Patient tab							
% Disc	This is very useful if and when you want to give a patient a discount of some kind (e.g., as a courtesy discount if he/she has no insurance). NOTE: <i>If you set this up here, it will carry over into any transactions created for this patient.</i>	X					• 5% on purchases) • 10 on office visits
Acct Status	Allows you to specify the status of the patient's account from an associated list.* This is useful when taking payments, creating invoices and statements, or other general billing tasks.			X Account Status list*			• Send an invoice to a patient only after a payment has been received • Track information for patient accounts that need to be sent to collections
Acct Type	You can specify the account type from the associated account type list.* Account types can be very useful when running reports and grouping information. NOTE: <i>If you set this up here, it will carry over into any transactions created for this patient.</i>			X Account Type list*			• BK – Below Knee • Append modifiers RT, LT, etc. • Associate with a merge document so that it prints out on an invoice (e.g., care instructions for the service provided). • Use to run reports for all BK accounts.
Ad is	Allows you to specify the “type” of address you have entered; providing more information about. NOTE: <i>If you select anything other than “Home” here, you must fill in the Location field on the record.</i>		X				• Choices are: Home Skilled Nursing Facility Resident Treatment Program Nursing Home

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Patient's address This can be defined by your office, but is generally used to record the street address of the current patient.	X					6001 Talister Court 30 E. Broadway Street 10251 NW Spring Road
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					6001 Talister Court Apartment 205 10251 NW Spring Road Room 34A
Birth Date	Patient's date of birth (can also be identified as DOB). This field formats itself as you type so you don't have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 1968, not just 68). The system will calculate the patient's age as of the current date and display next to this field.	X	X Calendar is associated to allow you to "pick" the date				- Date appears as: 5/17/1968 (but was entered as 5171968) Age displayed on 6/2/2002 would be Age 34. - Date appears as: 11/9/1904 (but was entered as 1191904) Age displayed on 6/2/2002 would be Age 98.
City, State, Zip	All apply to the Patient's address. The state must be entered as the standard 2 letter abbreviation	X					- Baltimore, MD 21245 - Costa Mesa, CA 92626
Company	Your own company name. This will generally be auto-filled when you open the record. However, if you have more than one company name registered with Futura, you will be able to select from the various registered company names.			X Company list predefined at installation.	X		- Page OPS and Associates - MedWest Medical Equipment

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Diagnosis	You can select as many as 4 diagnoses from the existing list.* Remember that these diagnoses are specifically related to this patient's record. While you can change the diagnosis in a particular transaction, the diagnoses on the patient record will not change until you do so from the patient record itself.			X Diagnosis list*			• 195.5 Leg Sarcoma Neoplasm ligament • 250.0 Diabetes Mellitus
Email	You can enter a patient's email address so that you can easily send reminders and other correspondence to the patient. Once you have entered the patient's email address, you can click on the email icon to open a blank email message, then begin typing the correspondence.	X					• jjones@home.com • rvelasquez@work.com
ID	Patient's ID. You can either assign/enter an ID using an established method for your company or the system will automatically assign it for you. This helps to prevent confusing two patients with the same first and last name.	X			X		• OPS123 • P2 O15
Location	Allows you to specify the patient's location. In other words, where is the patient being seen?			X Patient Location list*			• Western Medical Center • Olive Grove Nursing Home
Name	Patient's name. It is recommended that you add a middle name or initial when possible to increase the uniqueness of each patient, helping to prevent confusing two patients with the same first and last name.	X					• James Paul Fortino • Sally J. Reynolds

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Note	You can enter any quick note you need here as a reminder or just any general information regarding this patient. The note can be edited at any time. IMPORTANT! Use caution when entering information into this note area as it will be printed out on the patient's correspondence (e.g., invoice/statement). Therefore, be sure never to put anything you wouldn't want the patient to read. To make a note that will be stored with the patient record, but not be seen by the patient, press F3.	X					• Thank you for your prompt payment. • Please call us in 6 months to make a follow-up appointment.
Phone	Generally refers to the patient's home phone number, but can also be the best contact phone number (e.g., relative, neighbor, nurses desk, etc.). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-1034 (but was entered as 4105551034) • Number appears as: (714) 555-9876 (but was entered as 7145559876)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Primary Physician	Allows you to specify a Primary Physician. You can select from the existing list* of physicians. In this case, this would refer to the physician that sees the patient on a long term, non-specialist basis. Primary physicians are usually considered to be the family doctor, general practitioner, etc. They are also often associated with HMO and PPO coverage. IMPORTANT! If you are accessing/using Envoy, and if the primary and referring physician are the same, do not include him/her in both fields. Doing so will prevent your Envoy claims from processing properly. If you are filing a claim for Medicare in this situation, enter the name in the Primary Physician field only. If you are filing a claim for any other non-medicare insurance, include the physician as the Referring Physician only.			X Physician list*			Referring Physician and Primary Physician are not necessarily the same. The Primary Physician may be a general practitioner at an HMO, but the Referring Physician may be an orthopedic specialist.

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Ref. Physician	Allows you to specify a “referring” physician. You can select from the existing list* of physicians. This physician would be the one that actually “sent” the patient to your facility for treatment and/or service. You may even have both a Referring Source as well as a Referring Physician. You may also have both a Referring Physician and a Primary Physician. IMPORTANT! If you are accessing/using Envoy, and if the primary and referring physician are the same, do not include him/her in both fields. Doing so will prevent your Envoy claims from processing properly. If you are filing a claim for Medicare in this situation, enter the name in the Primary Physician field only. If you are filing a claim for any other non-medicare insurance, include the physician as the Referring Physician only.			X Physician list*			Referring Physician and Primary Physician are not necessarily the same. The Primary Physician may be a general practitioner at an HMO, but the Referring Physician may be an orthopedic specialist.

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Ref. Source	Allows you to specify a “referring” source. You can select from the existing list* of patient locations or labs/outside facilities. This would be applicable if one of those sources provided this patient with a referral to your facility. You may even have both a Referring Source as well as a Referring Physician.			X Patient Location OR Lab/ Outside Facility list*			• ABC Orthopedic Center • Western Medical Center • Phone Book/Yellow Pages
Release	Allows you to specify the status/level of any release given to the patient		X				• Choices are: Release Allowed Restricted Release No Release
Sex	Refers to the patient’s gender.					X	
Signed Date	Generally refers to the first date the patient signed for release of medical benefits. This field formats itself as you type so you don’t have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01).	X	X Calendar is associated to allow you to “pick” the date				• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Social Security Number	It is important to include the patient's social security number as it will be the foundation of any claims you file on this patient's behalf. It is also another excellent way to specifically identify each patient. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -).	X					Number appears as: 111-22-3333 (but was entered as 111223333)
Specialist	Allows you to specify the specialist (from within your company) who is assigned to this patient. You can select from the existing list* of specialists.			X Specialist list*			This is not the same as a physician who specializes in a particular medical field. It ONLY refers to the specialists/practitioners within your company.
Tax Type	Tax type allows you to specify what tax (if applicable) should be applied to items sold by your company. The tax type can be set for each patient, or as a default in your company's settings. You can set this up using the Tax category. The system will always look at the patient record for a specified tax type. If one is not detected, the tax type will default to whatever is set for your company. IMPORTANT! Taxes will only be applied to HCPC codes that are designated as taxable (see page A-24).			X Tax Type list*			Your main office is in county A that charges 6% sales tax on various items sold by your company to patients. You can have the tax type set for your company for 6%. However, if you have a satellite office in another county that charges 6.75% sales tax, you can set the tax type of 6.75 for only the patients in your system that will be purchasing items in your satellite office.

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Work	Generally refers to the patient's work phone number. But can be used as an additional contact number if necessary.	X					- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Insurance 1 & 2, and 3 tabs							
Deductible	You can enter the patient's required deductible. This amount will be carried over into transactions created for each visit. <i>NOTE: While this appears on the patient's insurance information and any associated transactions, it is not used by the system for any automatic calculation. It is for reference only.</i>	X					\$15 (co-pay) 20%
Group Name	The patient's insurance Primary: group name should be listed on their (respective) health insurance card.	X					- PPO - Family
ID	The patient's insurance ID should be listed on their (respective) health insurance card. This ID is not always a social security number. However, while Medicare does use a person's social security number, it is always followed by an alpha character.	X					- Private Insurance: G020-7890542 - Medicare: 000-11-2222R

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Indicator	Only required for Medicare patients and is only used for electronic transactions when the patient is not using Medicare as their primary insurance/payor (i.e., using Medicare as a secondary or tertiary insurance source). The primary insurance indicator fields needs to reflect why the patient is using a private insurance source as their primary and using Medicare as secondary or tertiary.	X					Please review the DMERC manual for the details and specifications of the rules for this item.
Insurance Options (primary)	Accept Assignment is a very important option to consider. It is often setup directly with the insurance company; particularly Medicare or any insurance company/payor with whom you have a contract. If you choose to accept the assignment, your company will be receiving payments directly from the payor. When you accept assignment from the primary insurance company, you are automatically accepting assignment from any secondary and tertiary insurance coverage. However, if it is left unassigned, the balance will be forwarded to the patient be responsible to forward payment to you.					X	
NOTE: - This option can be set up in the Insurance setup record so that it is applied to any patient using that particular insurance (see page A-30). - If this option is not checked on the insurance company record, the system will automatically look at the insurance setup information. If assignment has not been accepted there, the system will then check the patient record. If not checked there, then the system will check the transaction record.							

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Office ID	Not commonly used, but some insurance companies require this special indicator on a patient's insurance card. The purpose of the office ID may differ among various insurance companies (e.g., associated branch office of insurance company).	X					
Pay %	Enter the amount that the primary insurance is responsible to pay (as opposed to the deductible which is up to the patient). This amount will be carried over into transactions created for each visit.	X			X Will auto-fill from Patient record."		• 100% (most HMO's) • 80% (for indemnity plans)
	Enter the amount that the secondary insurance is responsible to pay (as opposed to the deductible which is up to the patient). This amount will be carried over into transactions created for each visit.				X Will auto-fill from Patient record."		• 100% (most HMO's) • 80% (for indemnity plans)
Primary	Enter the name of the patient's primary insurance company			X			• Cigna Healthcare • Medicare
Relationship	You need to specify the relationship between the patient and the insured person					X	• Self • Husband • Son

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Remaining	If a patient has to meet his/her deductible before the (respective) insurance company will pay, this can be used to indicate the amount of any deductible that is left for the patient to pay.	X					A patient has a \$200 deductible per year. She comes in for an office visit and pays the \$90 fee. This means she has a remaining deductible of \$110.
Secondary	Enter the name of the patient's secondary insurance company (if applicable).			X			- Aetna - Goldstar Health Insurance
Tertiary	Enter the name of the patient's tertiary (third) insurance company (if applicable).			X			General Med Insurance
Supplemental tab							
Attorney	If the patient is utilizing the services of an attorney for any reason regarding the patient's care by your company, you can select the attorney from the existing list* of attorneys. This information may become very important if this patient is (or may be) involved in any litigation regarding their condition. This is particularly true of workman's comp cases. Having this information in the system allows you to easily prepare correspondence and other documentation to send to the attorney regarding this patient's case (e.g., bills, diagnosis, service or procedures.			X Attorney list*			- George Phillips, Esq - Marlene Viviano, Esq

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Death Date	If and when a patient passes away, you can enter that date here for reference and record keeping purposes. Once this date is entered for a patient, it appears at the top of the patient's record. It also allows the system to warn you if you attempt to create a transaction or appointment for a patient with a death date. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01).	X	X Calendar is associated to allow you to "pick" the date				• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)
Employment Information	You can specify one or more items that apply to the patient's current employment status. This may be important when considering disability and insurance claims, as well as care recommendations.					X	• Choices are: Employment Full-time Full-time Student Part-time Student Employment Part-time Self-Employed Retired Active Military Unknown
Height	Enter the patient's height in inches	X					• 73" (i.e., 6 feet, 1 inch tall)
Last invoice Last statement Last service	These are not fields that you will need to complete. Instead, these will be auto-filled when you create/complete transactions and claims.	n/a	n/a	n/a	n/a	n/a	
Marital Status	You may want to specify the patient's current marital status. This may be important when considering insurance claims, as well as care recommendations.					X	• Choices are: Single (i.e., never been married) Married Other Divorced Separated Widowed

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Monthly Payment	If the patient has made payment arrangements, you can specify the amount due each month.	X					• \$125
Other Specialist	If the patient is seeing more than one specialist for any particular reason, you can select the “other” specialist from the existing list* of specialists.			X Specialist list*			
Recall for	You can enter a specific reason for needing to contact the patient for future visits. IMPORTANT! <i>This information MUST be input in a consistent manner in order for it to it to be accurately and consistently reflected in any reports in which you may include it (e.g., you cannot use both “FU” and “Follow up”. You will need to be sure that one or the other only is used.</i>	X					• 3 and 6 month follow-up appointments.
Retire Date	You can specify if and when a patient has retired from his/her job. This may be important when considering disability and insurance claims, as well as care recommendations. This field formats itself as you type so you don’t have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01)	X	X Calendar is associated to allow you to “pick” the date”				• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)

Balance tab							
30 Days	Amount past due 30 days after billing.	Each one of these fields specifies the current status of the patient's account (i.e., are they current or are they X number of days behind with payment) These are cumulative amounts calculating both monies owed by the patient and/or the patient's insurance (primary, secondary, tertiary) company. All of the balance information (shown in US dollar amounts) is auto-filled from information compiled from all transactions, invoices, statements, and claims for this patient.					
60 Days	Amount past due 60 days after billing.						
90 Days	Amount past due 90 days after billing.						
120 Days	Amount past due 120 days after billing.						
Balance as of	This will appear with the balance due as of the current date.						
Current	Reflects the amount currently due and payable on the account.						
Deductible	Lists the patient's current deductible amount						

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Primary Insurance	Shows the payments received from the patient's various insurance resources						
Secondary Insurance							
Tertiary Insurance							
Total Balance is	This represents the total of the patient's financial responsibility as well as what the insurance may owe on the patient's account.						The patient owes \$200, and the insurance company owes \$1,735. This means that the total balance for this patient is \$1,935.
Emergency tab							
Address 1	Emergency contact's address This can be defined by your office, but is generally used to record the street address of the current emergency contact.	X					6001 Talister Court 30 E. Broadway Street 10251 NW Spring Road
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					6001 Talister Court Apartment 205 10251 NW Spring Road Room 34A
City, State, Zip	All apply to the Emergency contact's address. The state must be entered as the standard 2 letter abbreviation	X					- Baltimore, MD 21245 - Costa Mesa, CA 92626

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Script Status	Select the status that applies to the current prescription (i.e., has it been printed, and if so, has it been signed and returned by the associated physician?)					X	• <i>Choices are: Printed Returned</i>
Script Text	This is auto-filled from the service line created in the related transaction. However, the script text can be edited once the script is created.	X					• <i>A4311 CATHETER WO BAG 2 WAY LATEX - MEDICALLY NECESSARY</i>

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Rental Pages Record

Please see “Use Rental Pages” on page 6-1 for additional information. Also see pages A-6, A-9, and A-83 for more information about various fields you will find when creating a rental page.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Rental Pages tab							
Accept Assignment	This is a very important option to consider. It is often setup directly with the insurance company; particularly Medicare or any insurance company/ payor with whom you have a contract. If you choose to accept assignment, your company will be receiving payments directly from the payor. When you accept assignment from the primary insurance company, you are automatically accepting assignment from any secondary and tertiary insurance coverage. Overall, this setting specifies that: - the payor will pay your company directly. - the allowed amount is the maximum reimbursement that can/ will be collected. It also helps automatically generate the UC when filing claims. - other benefit claims (e.g., medicare) will crossover automatically.		X		X Will auto-fill from created patient record.		
NOTE: - This option can be set up in the Insurance setup record so that it is applied to any patient using that particular insurance (see page A-30). - However, if this setting is left unassigned, the payment may or may not be forwarded to the patient. Some payors do not consider the indicator and mail the check to the provider anyway. As a general rule, it is highly recommended that you refer to your contract for guidance regarding the specific payor.							

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Patient's address This can be defined by your office, but is generally used to record the street address of the current patient.	X			X Will auto-fill from existing patient record		6001 Talister Court 30 E. Broadway Street 10251 NW Spring Road
Bill From	This is the date on which this rental page was archived into the patient's history. It is auto-filled according to the archiving process.				X Will auto-fill from archive process		- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)
City, State, Zip	All apply to the Patient's address. The state must be entered as the standard 2 letter abbreviation	X			X Will auto-fill from existing patient record		- Baltimore, MD 21245 - Costa Mesa, CA 92626
Company	Your own company name. This will generally be auto-filled when you open the record. However, if you have more than one company name registered with Futura, you will be able to select from the various registered company names.			X Company list predefined at installation.			- Page OPS and Associates - MedWest Medical Equipment
Diagnosis	Although these fields will auto-fill from the patient's record, you can change the contents in a particular rental page. You can choose other diagnoses from the existing Diagnosis list*. If this is the case, the diagnoses on the patient record will not change until you do so from the patient record itself. The next rental page you create for this patient will again reflect the information as it appears in the patient record.			X Diagnosis list*	X Will auto-fill from existing patient record		Femur fracture

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Discount %	This is very useful if and when you want to give a patient a discount of some kind (e.g., as a courtesy discount if he/she has no insurance). Although this field will auto-fill from the patient's record, you can change the contents in a particular rental page. The next rental page you create for this patient will again reflect the information as it appears in the patient record. NOTE: <i>If you want to apply this discount to all previous rental pages for this patient, you can use the Update Demographics function to do so. Be sure to use the Update Demographics feature with caution (see page 5-48 for more information).</i>	X			X Will auto-fill from created patient record		• 5% on purchases • 20% off for a year's equipment rental
Item Out	You can specify the date on which the item was actually picked up or delivered. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01). This date is based on the date your computer is using. There are security rights associated with this date field so that only certain authorized users in your office can alter the date(s)	X	X Calendar is associated to allow you to "pick" the date		X Will auto-fill as per the day's date.		• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Location	Allows you to specify the patient 's location. In other words, where is the patient being seen? Although this field will auto-fill from the patient's record, you can change the contents in a particular rental page. The next rental page you create for this patient will again reflect the information as it appears in the patient record.			X Patient Location list*	X Will auto-fill from existing patient record		• Western Medical Center • Olive Grove Nursing Home
Name	You can select the patient's name from the existing patient list*. If you are creating a rental page for an existing patient, then you need to use the Name drop down menu to select the patient. If no existing patient name is selected from the patient list, you can free type it, then this rental page will default to a "walk-in" (1 time only) rental page. It will not be associated any permanent patient record.	X See Field Description		X Patient list*			• James Paul Fortino • Sally J. Reynolds

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Number of Bills	This field will be automatically filled when you create and send a bill for this rental page. Until a bill is created, the number of bills will remain at 0. However, you each time you create/send a bill, this number will change to reflect the number of bills currently sent. NOTE: <i>It is very possible that upon installation of the Futura system, you have already sent out some bills. If this is the case, then you can manually enter the number of bills sent out prior to the use of Futura (e.g., you have sent out 3 bills for Priscilla Wagner, then you install Futura. You would then enter the number 3 here before you send out another round of bills.</i>	X			X Will auto-fill from created bill		You send a bill to the insurance company each month for the rental fees of this patient's wheelchair. The insurance will cover 9 months of rental, so the number will change to let you know when the 9th bill has been sent. This allows you to know when to change the billing to be sent to the secondary or tertiary insurances, or the patient.

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Referral	You can select from the existing list* of physicians. This physician would be the one that actually “sent” the patient to your facility for equipment rental. Although this field will auto-fill from the patient’s record, you can change the contents in a particular rental page. The next rental page you create for this patient will again reflect the information as it appears in the patient record.			X Physician list*	X Will auto-fill from existing patient record		Referring Physician and Primary Physician are not necessarily the same. The Primary Physician may be a general practitioner at an HMO, but the Referring Physician may be an orthopedic specialist.

Lab Charges	Enter any lab charges related to this incident	X	X Calculator is associated to allow you to "pick" the amount.				• \$225
Marital Information	You may want to specify the patient's current marital status. Although this field will auto-fill from the patient's record, you can change the contents in a particular rental page. The next rental page you create for this patient will again reflect the information as it appears in the patient record.				X Will auto-fill from created patient record	X	Choices are: Single (i.e., never been married) Married Other Divorced Separated Widowed
Medicaid Re-submission Code	This is provided by the insurance company/payor on the EMOB (explanation of benefits).	X					
Original Reference number	This is provided by the insurance company/payor on the EMOB (explanation of benefits).	X					
Prior Authorization Number	The insurance company/payor will furnish this number for authorization for payment of the service provided.	X					

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Special Program	Select the appropriate description for the patient's current illness or injury if he/she is eligible for any of the listed programs						- Choices are: - Physically Handicapped - Special Federal Funding Disability - PPV/Medicare - Medicaid (EPSDT) - Champus (sponsor) Handicapped - Champus (spouse) Handicapped - Champus (widow) Handicapped - Champus (child) Handicapped - Champus (child) Handicapped - Handicapped - various
Statement Number	This number is generated and provided by the insurance company. It allows the insurance company and you to track insurance statements.	X					2
Type of Disability	Select the appropriate disability status					X	- Choices are: - Short term - Long term - Permanent/total - No (disability)
Type of Doc	If any additional documentation is to be associated, you can indicate the kind of document for clarification and reference.					X	- Choices are: - DME Prescriptions - Explanation of Benefits - Diagnosis Report - Operative Note - PEN Certification - Ambulance Certification - Physical Therapy Certification - Chiropractic Justification

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Rental Line Window (in a Rental Page)

Please refer to page “Create a Billing Table” on page 6-4 for additional information. Also see pages A-6, A-9, and A-67 for more information about various fields you will find when creating a rental page.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
(HCPC) Description	Once you choose an HCPC code, the description will automatically be placed in this field. The description qualifies and clarifies the HCPC code itself.					X	E0112 Underarm crutch
Allowed	This represents the payment you expect to receive from previous interaction with the provider or by contractual agreement. This field is ONLY used to generate write-offs if the Accept Assignment (see page A-67) setting is checked AND the claim is filed. IMPORTANT! <u>DO NOT</u> leave this field at 0.00, otherwise, the entire amount will be automatically written off.	X					Charge is \$50.00 but only \$38.26 is allowed (payable by the insurance).
CMN1	Certificate of Medical Necessity. This is a requirement of Medicare only and is sent electronically.		X				DMERC 02.03A - Motorized Wheelchair
CMN2	This can be used if you need to include more than one CMN per rental line.		X				E0149 Heavy duty wheeled walker

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Diagnosis	Although these fields will auto-fill from the patient's record, you can change the contents in a particular rental page. You can choose other diagnoses from the existing Diagnosis list*. If this is the case, the diagnoses on the patient record will not change until you do so from the patient record itself. The next rental page you create for this patient will again reflect the information as it appears in the patient record.			X Diagnosis list*	X Will auto-fill from existing patient record		Femur fracture
Fee	This field allows you to specify the amount you charge for this particular rental item.	X					\$125.00 per week \$500.00 per month
Max Rx	Enter the maximum number of "refills" allowed for this item.						4
Modifiers 1-4	The modifiers add clarification and information to the for each line of service that applies to each specified HCPC code.			X Select Modifier list*			- RT - right - LT - left - RP - repair - MS - maintenance
POS	Place of Service (required by Medicare). This field represents the location at which the patient is utilizing a device or item supplied by your office.	X					12 - Patient's Home (and is the default) 31 - Skilled Nursing Facility

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Prescription	Select the prescription from the patient's prescription list as it applies to this rental item.						
Prior Authorization Number	The insurance company/payor will furnish this number for authorization for payment of the service provided. This number will be released with each recurring billing.						
Quantity	Enter the number of items included/prescribed for each "refill" of this rental item.						• 1 (lock pin) • 6 (stump socks)
Rx #	Enter the number provided with the prescription for this rental item.						

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Selling Vendor Record

Please refer to page “Associating Vendors with Specific Inventory Items” on page 8-15 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Contact	If a contact is listed in the vendor record, it will automatically appear here for reference.				X Will auto-fill from Vendor record.		•
Date	Enter the current date. This is important especially if you enter a price. This way you know if the price is out of date or not.	X	X Calendar is associated to allow you to “pick” the date				• <i>Date appears as: 1/23/2003 (but was entered as 1232003)</i> • <i>Date appears as: 10/7/2002 (but was entered as 1072002)</i>
Days	Enter the number of days it generally takes for the selected vendor to ship this item.	X					• 12 • 20
ID	Enter the ID that the vendor uses for this item. If you are using a bar scanner, this information will be filled in. This information will also be auto-filled into the Vendor ID field of the Order Entry record (see page “Vendor ID” on page A-42) when this item is added to an order.	X					• 078-ag-lu-9800 • tt34678a-ss
Price	Enter the price this vendor usually charges you for this item.	X					• 12.00 • 47.50
Vendor	Select the name of the vendor for the current item you are adding to your Inventory Product list.			X Select from Vendor list.*			• A1 Medical Supply • Barnes International

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Service Line Window (in a Transaction)

Please refer to page “Adding Service Lines to a Transaction” on page 5-60 for additional information. Also see pages A-96 and A-117 for more information about various fields you will find when creating a transaction

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Allowed	This represents the payment you expect to receive from previous interaction with the provider or by contractual agreement. IMPORTANT! <i>DO NOT</i> leave this field at 0.00, otherwise, the entire amount will be automatically written off.	X					75.00 234.75
Bill Qty (DME only)	If this is a DME transaction, this field will appear. Enter the number of items for which you will be billing the patient who has received a specific item. NOTE: See example at the right to see how this field differs from the Qty field on this record.						- The qty may be a box of individual items but the bill qty is 30 (pieces each of the item) - Medicare reimburses by the 50 electrodes in the box not by the box, but your inventory is by the box you buy it by the box and you would not generally sell it by the pieces, only the box but insurance reimburses by how many are in the box. (e.g. box equal 15.00, reimbursement.3 cents)
CMN1	Certificate of Medical Necessity. This is a requirement of Medicare only and is sent electronically.		X				DMERC 02.03A - Motorized Wheelchair
CMN2	This can be used if you need to include more than one CMN per service line.		X				DMERC 10.02b - Enteral Nutrition

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Deductible (Primary)	If a deductible amount has been withheld by the primary payor, you can enter it here. That amount will then be automatically transferred to the next (usually secondary) responsible payor. If no secondary payor is associated with this transaction, the amount will be transferred to the patient.						• 125.00
Deductible (Secondary)	If a deductible amount has been withheld by the secondary payor, you can enter it here. That amount will then be automatically transferred to the next responsible payor. If no other payor is associated with this transaction, the amount will be transferred to the patient.						• 125.00
Deductible (Tertiary)	If a deductible amount has been withheld by the tertiary payor, you can enter it here. That amount will then be automatically transferred to the next responsible payor. If no other payor is associated with this transaction, the amount will be transferred to the patient.						• 125.00

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Description	Enter a brief description of the product/service provided on this transaction. (See Product field described on page A-90.) NOTE: <i>If you did not select a product as described on page A-90, you can free type a description in this field.</i>	X			X Will auto-fill if you select a product. (See Product field on page A-90.)		- Bandage check - First prosthetic fitting
Diag 1-4	If you have selected diagnosis codes on the Transaction tab of this transaction (see page A-97), you can use these fields to select and prioritize those diagnosis codes (if appropriate) for this particular service line.		X				
HCPC	Select the appropriate HCPC code for this transaction. NOTE: <i>If you have associated inventory items with a HCPC, selecting the code in this field will use that associated information see “Setting Up Products and Pricing” on page 8-11 and “Inventory Product Record” on page A-33).</i>			X Select from HCPC code list.*			- L0210 - Thoracic Rib Belt - L8642 - Hallux Implant
Modifiers 1-4	The modifiers add clarification and information for each line of service that applies to each specified HCPC code.			X Select from Modifier list*	X Will auto-fill if associated with Account Types.		- RT - right - LT - left - RP - repair - MS - maintenance
POS	Place of Service (required by Medicare). This field represents the location at which the patient is utilizing a device or item supplied by your office.	X					12 - Patient’s Home (and is the default) 31 - Skilled Nursing Facility

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Primary	This refers to any payment or portion of a payment you receive from the primary insurance company toward this specific service lines. By entering a dollar amount in this field, you are applying payment detail to this service line for later reference. IMPORTANT! <i>Before entering an amount here, you MUST include a total payment first, the detailed service line payments will not be saved.</i> <i>See “Applying Regular Payments, Write-offs, and Adjustments” on page 5-71 and “Inventory Product Record” on page A-33 for more information about applying total payments.</i>	X					• 3215.85
Product	Select the product (if any) that you are distributing to the patient. The description of the product will appear in the Description field (see Description field described on page A-89.) NOTE: <i>See Section 8 of this user guide for information about inventory.</i>			X Select from Inventory list.*			• stump sock • ankle gauntlet

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Qty	If you distributed any items (e.g., inventory items) to this patient, enter the number of items here. NOTE: This field will work with any inventory you have set up in your system (see Section 8 of this user guide for information about inventory). Also see Bill Qty on page A-87	X					2 6
Secondary	Similar to the Primary field on this window, this refers to any payment or portion of a payment you receive from the secondary insurance company toward this specific service lines. By entering a dollar amount in this field, you are applying payment detail to this service line for later reference. IMPORTANT! Before entering an amount here, you MUST include a total payment first, the detailed service line payments will not be saved. See “Applying Regular Payments, Write-offs, and Adjustments” on page 5-71 and “Inventory Product Record” on page A-33 for more information about applying total payments.	X					200.76

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Srv From	Enter/select the date on which the service for this transaction began.	X	X Calendar is associated to allow you to "pick" the date				• Date appears as: 1/23/2003 (but was entered as 1232003) • Date appears as: 10/7/2002 (but was entered as 1072002)
Srv To	Enter/select the date on which the service for this transaction ended.	X	X Calendar is associated to allow you to "pick" the date				• Date appears as: 1/23/2003 (but was entered as 1232003) • Date appears as: 10/7/2002 (but was entered as 1072002)
Standard Fee	This field allows you to specify the amount you charge for this particular service.	X			X Will auto-fill from HCPC code if fee schedule has been attached record.		• 487.50 • 135.00
Tertiary	Similar to the Primary and Secondary fields on this window, this refers to any payment or portion of a payment you receive from the tertiary insurance company toward this specific service lines. By entering a dollar amount in this field, you are applying payment detail to this service line for later reference. IMPORTANT! Before entering an amount here, you MUST include a total payment first, the detailed service line payments will not be saved. See "Applying Regular Payments, Write-offs, and Adjustments" on page 5-71 and "Inventory Product Record" on page A-33 for more information about applying total payments.	X					• 45.00
TOS	Type of Service Pre-determined by various payors.	X					• 9 = Purchase • 4 = In office procedure

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Specialist Record

Please see “Add Specialists to the System” on page 4-9 for additional information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Address 1	Specialist's address This can be defined by your office, but is generally used to record the street address of the current specialist.				X Will auto-fill from existing employee record		6001 Talister Court 30 E. Broadway Street 10251 NW Spring Road
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.				X Will auto-fill from existing employee record		6001 Talister Court Apartment 205 10251 NW Spring Road Room 34A
Beeper	You can enter the specialist's pager number here (if applicable). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)				X Will auto-fill from existing employee record		- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
Cell	Refers to the specialist's cell phone number (if applicable). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)						- Number appears as: (410) 555-7777 (but was entered as 4105557777) - Number appears as: (714) 555-1313 (but was entered as 7145551313)
City, State, Zip	All apply to the Specialist's address. The state must be entered as the standard 2 letter abbreviation				X Will auto-fill from existing employee record		- Baltimore, MD 21245 - Costa Mesa, CA 92626

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Commission	This is generally used if you have a sales person working out of your office. If this sales person is eligible to receive commission from the company, enter the amount of commission here. You can also set the fee level for the commission using procedure codes (p. 4-24).	X					• 4% • 01%
Company	Your own company name that corresponds to this specialist. This will generally be auto-filled when you open the record. However, if you have more than one company name registered with Futura, you will be able to select from the various registered company names. This is particularly useful when you have multiple company sites and you want to specify that this practitioner only sees patients at a specific company location.			X Company list predefined at installation		X	• O&P Services Clearwater • O&P Palm Harbor • O&P Services Tampa • O&P Palm Orlando
Email	If the specialist has an email address that you will or can use for sending correspondence, you can record it here.	X					• sgonzaless@domain.com • sara.page@home.net
Fax	If the specialist has a separate fax number (e.g., for receiving faxes at home), you can record it here. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)						• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
Job Title	If titles are used in your company, you may want to record any that applies to this specialist.	X					• Lead Specialist • Sr. Practitioner
License #	Enter the state license number of this specialist.	X					

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
May have appointment	Select this option if you want this specialist's name to appear in the appointment viewer and be available for scheduling appointments. NOTE: <i>When this setting is selected, the Appt will appear at the bottom of the record (see page 5-2).</i>					X	
Name	Select the specialist's name from the existing list* of employees.				X Will auto-fill from existing employee record		
Phone 1	Generally refers to the specialist's main contact phone number (e.g. home). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X			X Will auto-fill from existing employee record		• Number appears as: (410) 555-1034 (but was entered as 4105551034) • Number appears as: (714) 555-9876 (but was entered as 7145559876)
Phone 2	Generally refers to a secondary number for contacting the specialist (e.g., alternative office). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
Supervisor	If this specialist has a specific supervisor, you can record it here. Select the supervisor's name from the list* of existing employees.	X					

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

Transaction Record

Please see “Creating Transactions” on page 5-54 for additional information. Also see pages A-67 and A-117 for more information about various fields you will find when creating a transaction

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Transactions tab							
Accept Assignment	This is a very important option to consider. It is often setup directly with the insurance company; particularly Medicare or any insurance company/ payor with whom you have a contract. If you choose to accept assignment, your company will be receiving payments directly from the payor. When you accept assignment from the primary insurance company, you are automatically accepting assignment from any secondary and tertiary insurance coverage. Overall, this setting specifies that: - the payor will pay your company directly. - the allowed amount is the maximum reimbursement that can/ will be collected. It also helps automatically generate the UC when filing claims. - other benefit claims (e.g., medicare) will crossover automatically.		X		X Will auto-fill from created patient record		
NOTE: - This option can be set up in the Insurance setup record so that it is applied to any patient using that particular insurance (see page A-30). - However, if this setting is left unassigned, the payment may or may not be forwarded to the patient. Some payors do not consider the indicator and mail the check to the provider anyway. As a general rule, it is highly recommended that you refer to your contract for guidance regarding the specific payor.							

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
City, State, Zip	All apply to the Patient's address. The state must be entered as the standard 2 letter abbreviation	X			X Will auto-fill from existing patient record		- Baltimore, MD 21245 - Costa Mesa, CA 92626
Company	Your own company name. This will generally be auto-filled when you open the record. However, if you have more than one company name registered with Futura, you will be able to select from the various registered company names.			X Company list predefined at installation.			- Page OPS and Associates - MedWest Medical Equipment
Diagnosis	Although these fields will auto-fill from the patient's record, you can change the contents in a particular transaction. You can choose other diagnoses from the existing Diagnosis list*. If this is the case, the diagnoses on the patient record will not change until you do so from the patient record itself. The next transaction you create for this patient will again reflect the information as it appears in the patient record.			X Diagnosis list*	X Will auto-fill from existing patient record		Diabetic Amputation

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Discount %	This is very useful if and when you want to give a patient a discount of some kind (e.g., as a courtesy discount if he/she has no insurance) Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record. NOTE: <i>If you want to apply this discount to all previous transactions for this patient, you can use the Update Demographics function to do so. Be sure to use the Update Demographics feature with caution (see page 5-48 for more information).</i>	X			X Will auto-fill from created patient record		• 5% on purchases) • 10 on office visits
Entry Date	You can specify the date on which you are creating the transaction. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01). This date is based on the date your computer is using. There are security rights associated with this date field so that only certain authorized users in your office can alter the date(s)	X	X Calendar is associated to allow you to "pick" the date		X Will auto-fill as per the day's date.		• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
History Date	This is the date on which this transaction was archived into the patient's history. It is auto-filled according to the archiving process.				X Will auto-fill from archive process		• Date appears as: 1/23/2002 (but was entered as 1232002) • Date appears as: 10/7/2000 (but was entered as 1072000)
Invoice #	This field will be automatically filled when you create an invoice for this transaction. The invoice number format can be setup for you by Futura. However, you can also enter your own invoice number as defined by your company for each transaction. (i.e., if you are using pre-printed invoices with printed invoice numbers, you will need to indicate the specific number in the transaction that corresponds to the actual paper invoice.)	X			X Will auto-fill from created invoice		• For printed invoice: the printed invoice number is A23478. This is the number you need to enter into this field since it corresponds to the printed invoice number.
Location	Allows you to specify the patient's location. In other words, where is the patient being seen? Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.			X Patient Location list*	X Will auto-fill from existing patient record		• Western Medical Center • Olive Grove Nursing Home

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Name	You can select the patient's name from the existing patient list*. If you are creating a transaction for an existing patient, then you need to use the Name drop down menu to select the patient. If no existing patient name is selected from the patient list, you can free type it, then this transaction will default to a "walk-in" (1 time only) transaction. It will not be associated any permanent patient record.	X See Field Description		X Patient list*			- James Paul Fortino - Sally J. Reynolds
Post Date	This represents the date of completion of a transaction and is auto-filled as a result of changing the status within the options menu of the transaction record and/or from the daily close applying the date automatically. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01).	X	X Calendar is associated to allow you to "pick" the date		X Will auto-fill from daily close		- Date appears as: 1/23/2002 (but was entered as 1232002) - Date appears as: 10/7/2000 (but was entered as 1072000)

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Referral	You can select from the existing list* of physicians. This physician would be the one that actually “sent” the patient to your facility for treatment and/or service. Although this field will auto-fill from the patient’s record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record. IMPORTANT! <i>If you are accessing/using Envoy, and if the primary and referring physician are the same, do not include him/her in both fields. Doing so will prevent your Envoy claims from processing properly. If you are filing a claim for Medicare in this situation, enter the name in the Primary Physician field only. If you are filing a claim for any other non-medicare insurance, include the physician as the Referring Physician only.</i>			X Physician list*	X Will auto-fill from existing patient record		Referring Physician and Primary Physician are not necessarily the same. The Primary Physician may be a general practitioner at an HMO, but the Referring Physician may be an orthopedic specialist.

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Service Date	It is necessary that you specify the service date as opposed to the billing or posting date. This date is recognized by the system as the delivery date of an item or service. This field formats itself as you type so you don't have to enter any special characters (i.e., / or -). However, you must enter the date as 4 digits (i.e., 2001, not just 01).	X	X Calendar is associated to allow you to "pick" the date				• <i>Date appears as: 1/23/2002 (but was entered as 1232002)</i> • <i>Date appears as: 10/7/2000 (but was entered as 1072000)</i>
Service Line	This area of the record allows you to specify the exact nature of the visit for which the current transaction is being created. You will need to select the HCPC code from the existing list*. See page "Rental Pages Record" on page A-67 for more information about the fields that appear there.			X HCPC Code List*			•
Specialty	Refers to the specialist handling this patient's care. Although this field will auto-fill from the specialist's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the specialist record.			X Specialist list*	X Will auto-fill from created patient record		• <i>This is not the same as a physician who specializes in a particular medical field. It ONLY refers to the specialists/practitioners within your company.</i>

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Insurance 1, 2 & 3 tabs							
Deductible (primary)	You can enter the patient's required deductible. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record. <i>NOTE: While this appears on the patient's insurance information and any associated transactions, it is not used by the system for any automatic calculation. It is for reference only.</i>	X			X Will auto-fill from created patient record		• \$15 (co-pay) • 20%
Group Name	The patient's insurance group name should be listed on their (respective) health insurance card. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.	X			X Will auto-fill from Patient record."		• PPO • Family

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
ID	The patient's insurance ID should be listed on their (respective) health insurance card. This ID is not always a social security number. However, while Medicare does use a person's social security number, it is always followed by an alpha character. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.	X			X Will auto-fill from Patient record."		• <i>Private Insurance:</i> G020-7890542 • <i>Medicare:</i> 000-11-2222R
Indicator	Only required for Medicare patients and is only used for electronic transactions when the patient is not using Medicare as their primary insurance/payor (i.e., using Medicare as a secondary or tertiary insurance source). The primary insurance indicator fields needs to reflect why the patient is using a private insurance source as their primary and using Medicare as secondary or tertiary. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.				X Will auto-fill from Patient record."	X	• <i>Please review the DMERC manual for the details and specifications of the rules for this item.</i>

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Insurance Options (primary)	Accept Assignment is a very important option to consider. It is often setup directly with the insurance company; particularly Medicare or any insurance company/payor with whom you have a contract. If you choose to accept the assignment, your company will be receiving payments directly from the payor. However, if it is left unassigned, the patient will receive the payment and be responsible to forward payment to you. NOTE: <i>This option can be set up in the Insurance setup record so that it is applied to any patient using that particular insurance (see page A-30).</i>				X Will auto-fill from Patient record."	X	
Office ID	Not commonly used, but some insurance companies require this special indicator on a patient's insurance card. The purpose of the office ID may differ among various insurance companies (e.g., associated branch office of insurance company). Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.	X			X Will auto-fill from Patient record."		

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Pay %	Enter the amount that the insurance is responsible to pay (as opposed to the deductible which is up to the patient). This amount will be carried over into transactions created for each visit. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.	X			X Will auto-fill from Patient record."		• 100% (most HMO's) • 80% (for indemnity plans)
Primary	Enter the name of the patient's primary insurance company. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.	X			X Will auto-fill from Patient record."		• Cigna Healthcare • Medicare
Relationship Field: primary relationship; Primary: relationship to insured;	You need to specify the relationship between the patient and the insured person. Although this field will auto-fill from the patient's record, you can change the contents in a particular transaction. The next transaction you create for this patient will again reflect the information as it appears in the patient record.	X			X Will auto-fill from Patient record."		• Self • Husband • Son

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Acct #	Enter the account number that the vendor has assigned to your company.	X					• 0010402abc35 • 56723
Address 1	Vendor's address This can be defined by your office, but is generally used to record the street address of the current vendor. This is also the address to which you will payments.	X					• 2050 62nd Avenue • 12300 N. Central • 452 Outlook Point Way
Address 2	As with Address 1, this field can also be defined by your office. However, this second field is generally used to include additional address information. Not all address will have this second portion.	X					• 2050 62nd Avenue Suite 401 • 452 Outlook Point Way 16th Floor
City, State, Zip	All apply to the vendor's address. The state must be entered as the standard 2 letter abbreviation	X					• Largo, MD 33625-1212 • Vallejo, CA 95714-4567
Contact 1	Enter the name of the person you most often speak to when ordering from this vendor (i.e., your sales person or account representative).	X					• Lien Frey
Contact 2	Enter the name of an alternate person you can speak to when your Contact 1 person is unavailable.	X					• David Page, Sales Manager
Dlvy Days	Enter the number of average days this vendor takes to ship an item. This number will appear in the “Expect in” field (see page A-39) when you create an order associated with this vendor.	X					• 10 • 14

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Email 1	Enter the main email address that you will or can use for sending correspondence (inquiries and requests) to this vendor (especially for your main contact).	X					• sales@.TandT.com • LFrey@a1pros.com
Email 2	You can use this field to enter an alternate or secondary email address (e.g., for Contact 2 or someone in their billing department).	X					• billing@.TandT.com • CPlum@a1pros.com
F ax	If the vendor has a fax number that you can use for sending correspondence, you can record it here. This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
Name	Enter the company name of the vendor.	X					• Tried and True Medical Supply • A1 Prosthetic Products
Phone (1)	Generally refers to the attorney's main contact phone number (e.g. main office number). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-1034 (but was entered as 4105551034) • Number appears as: (714) 555-9876 (but was entered as 7145559876)
Phone (2)	Generally refers to a secondary number for contacting the attorney (e.g., alternative office). This field formats itself as you type so you don't have to enter any special characters (i.e., () or -)	X					• Number appears as: (410) 555-7777 (but was entered as 4105557777) • Number appears as: (714) 555-1313 (but was entered as 7145551313)
Shipping	Select the type of shipping most often used by this vendor.			X Select from Shipping Types list.*			• Direct Delivery • UPS 2nd Day • USPS Priority

*If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.

FIELD LABEL	FIELD DESCRIPTION	FREE TYPE	SELECT FROM DROP DOWN LIST	DROP DOWN TO SOURCE RECORD 	AUTO-FILL FROM ANOTHER SOURCE	CHOOSE AN OPTION	EXAMPLE
Tax Exempt	Check this indicator if the products sold by this vendor are tax exempt (i.e., when products are purchased for resale).					X	•
Terms	Select the agreed upon payment terms you have arranged with this vendor.			X Select from Terms list.*			• 30 days • 10 day discount
Web Site	If the vendor has a website, you can enter the address here. This may come in handy for checking pricing, address, etc.	X					• www.a1.com • www.tandt.com

**If the source you need is not already in the list, you can quickly add it by opening the source list and using the Add/Insert button to create a new record, then complete and save the necessary information.*

Appendix B - Installation Guide

In order to install your new Futura software, please confirm that your system meets the minimum requirements as noted on page B-2 of this guide, then follow the instructions on the following pages.

During the installation process you will be asked to:

- **Accept the software license agreement.**
- **Decide if you want to install the software from another computer, use the current computer as a server, or install the software on another computer to be used as a server.**
- **Choose the location on your network or hard drive to install and store the software and its components.**
- **Enter basic registration information (i.e., company name and registration number).**
- **Enter a name for the database you will be creating.**
- **Decide whether or not you want to download HCPC and DME HCPC codes in your database.**
- **Specify the state in which you are working.**

Once all of this information has been entered/specified, you'll be ready to add to your database and work with your patient and account information like never before. For information on using the software, please refer to the Futura Software User Guide that has been provided to you by Futura International, Inc.

As always, we welcome your comments regarding our product and documentation. You may e-mail support@futuraintl.com or call 727-791-3332 and speak to someone in technical support.

System Requirements

Large Office Server - Minimum Requirements

- **Server:** Pentium III / P4 processor or AMD Athlon, 1 GHz or better, Dual-processor capable
- **Memory:** 512 MB RAM
- **Hard Drive:** (4) 40GB U100 7200 RPM EIDE, Configured as RAID 0+1 or 5
- **Operating System:** Microsoft Windows 2000 Server
- **Network Card:** 3Com 10/100 Ethernet Adapter
- **Accessories:** APC UPS
- **Network Hub:** 10/100 Switching Hub
- **Backup Storage:** Tape

Small Office Server - Minimum Requirements

- **Server:** Pentium III / P4 processor or AMD Athlon. 1 GHz or better
- **Memory:** 512 MB RAM
- **Hard Drive:** 60GB U100 7200 RPM EIDE
- **Operating System:** Microsoft Windows 2000 Server
- **Network Card:** 3Com 10/100 Ethernet Adapter
- **Accessories:** APC UPS
- **Suggested Network Hub:** 10/100 Switching Hub
- **Backup Storage:** Tape

Large Office Client Station - Minimum Requirements

- **Station:** Pentium II/Celeron Processor or AMD Athlon Duron, 233 MHz
- **Memory:** 512 MB RAM
- **Hard Drive:** 20 GB HD
- **Operating System:** Microsoft Windows 2000 Professional or Microsoft Windows XP Professional
- **Network Card:** 10/100 Ethernet Adapter
- **Monitor:** 15", 800x600 resolution minimum
- **Communications:** 56K Modem **AND** pcAnywhere32 v10.5 – on any machine intended to submit electronic claims

Large Office Client Station - Minimum Requirements

- **Station:** Pentium II/Celeron Processor or AMD Athlon Duron, 233 MHz
- **Memory:** 256 MB RAM
- **Hard Drive:** 10 GB HD
- **Operating System:** Microsoft Windows 2000 Professional or Microsoft Windows XP Professional
- **Network Card:** 10/100 Ethernet Adapter
- **Monitor:** 15", 800x600 resolution minimum
- **Communications:** 56K Modem AND pcAnywhere32 v10.5 – on any machine intended to submit electronic claims

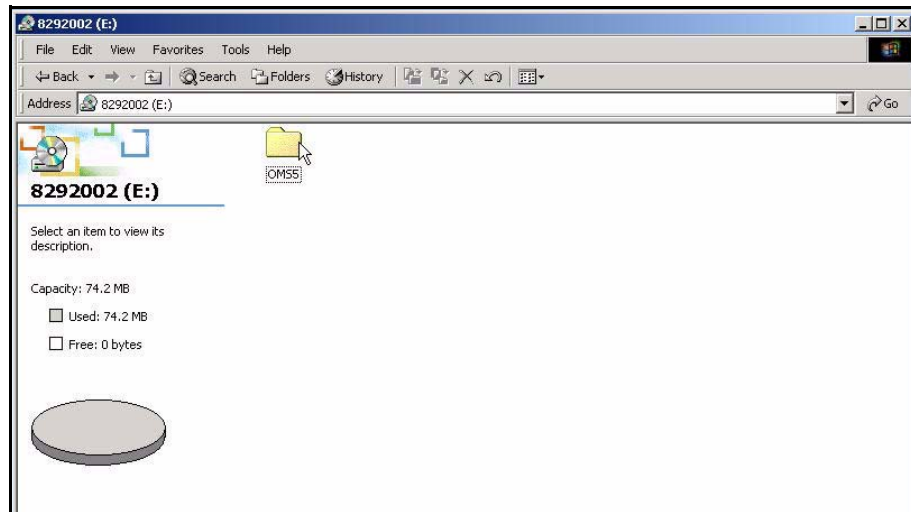

NOTE:

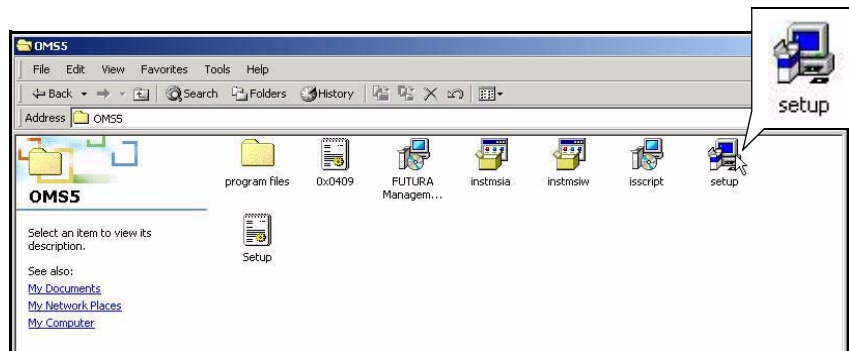

If your system does not meet the above requirements, Futura cannot guarantee the quality of the installation of its software. In addition, we recommend that all computers connected to the network have a UPS. Please consult your hardware technician prior to any purchase.

Installing the Software:

1. Place the CD in the CD drive of your system.
2. Find that drive on your system.

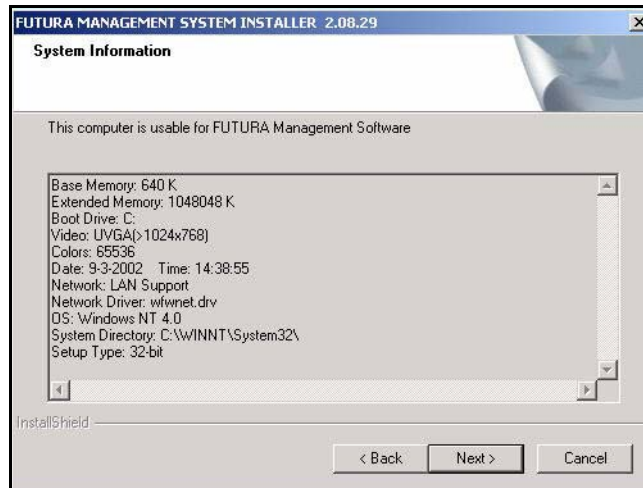

3. Double click on the OMS5 file folder to display its contents.

4. Double click on the setup icon to display the preparation information page of the installation process.
5. Click Next to display a prompt that asks you if you want to view the details of what will happen during installation.

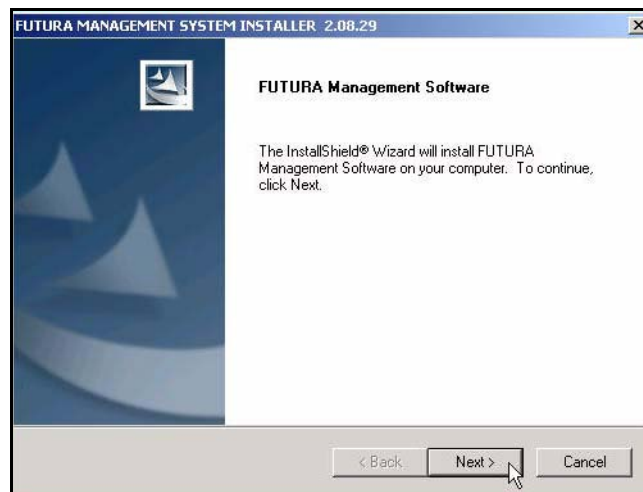

6. Click Yes to display the following window.

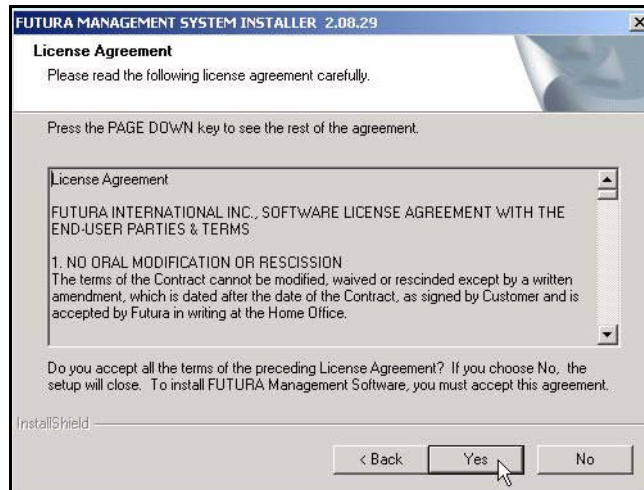

7. Click Next, then go to step 8.

OR

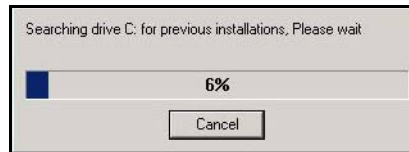

Click No to display the following window.

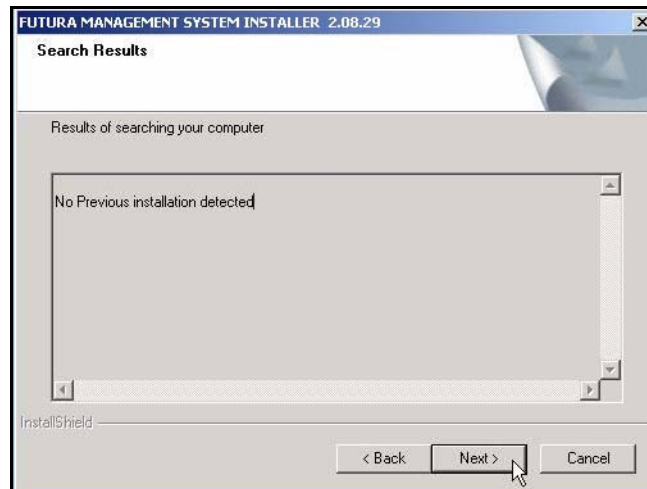

8. Click Next to display the software license agreement.

9. Click Yes to accept the terms of the agreement and display a message letting you know that the system is checking for previous installations.
 - If you click No, the installation process will be terminated.

- It can take your system several seconds to several minutes to complete the process of checking for previous versions. Please be patient.
- Once the process has been completed, a confirmation message will appear to let you know that no other versions of Futura are installed.

- Click Next to display a window asking you if you want to install the software from another computer on your network.

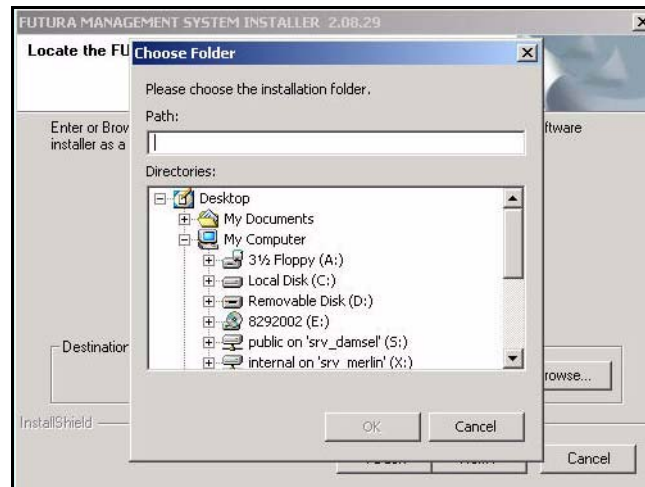

- Click Yes if this is what you want to do.

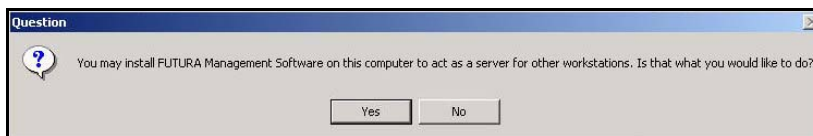

NOTE:

You will only use this option if you have already installed the Futura software on another computer within your company system. If you choose to use this option, you will then be prompted to specify the location (on the network) of the computer with the currently installed Futura software. Once you have done this, skip to step 14.

OR

Click No to display the next installation option that allows you to set the current computer as the server computer.

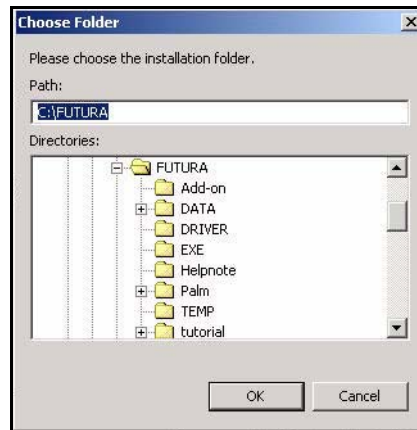

12. Click Yes if this is what you want to do.

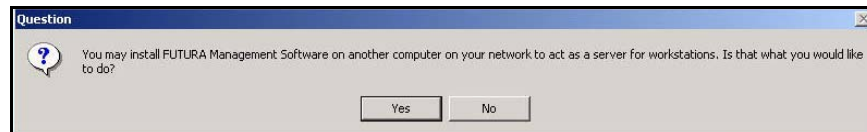

NOTE:

You will use this option if you want to allow other users/computers to access and download the Futura software from the current computer. If you choose to use this option, you will then be prompted to specify the location (folder) where you want to install and store the Futura software and its components. Once you have done this, skip to step 14.

OR

Click No to display the next installation option that allows you to download the software on another computer in your network.

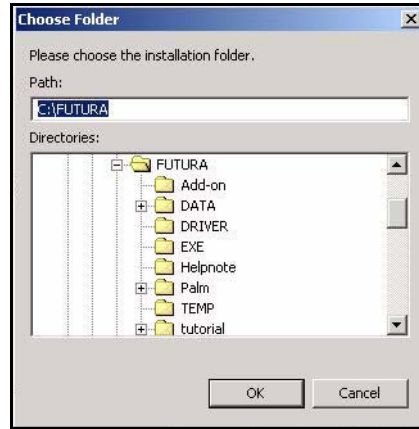

13. Click Yes if this is what you want to do.

NOTE:

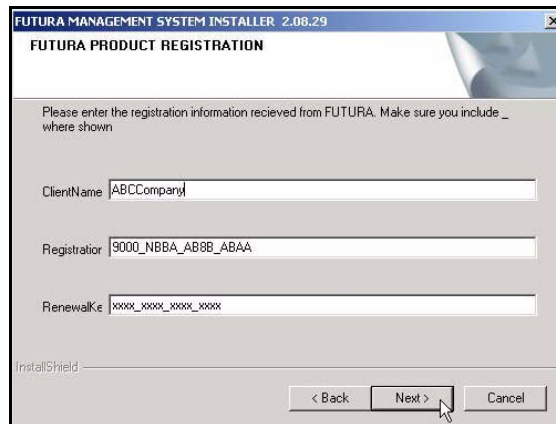

You will use this option if you want to allow other users/computers to access and download the Futura software from another computer. If you choose to use this option, you will then be prompted to specify the location (folder) where you want to install and store the Futura software and its components. Once you have done this, skip to step 14.

IMPORTANT!

Since this is the last installation option available, if you click No, the installation process will be terminated.

14. Click Next to display the Product Registration screen.

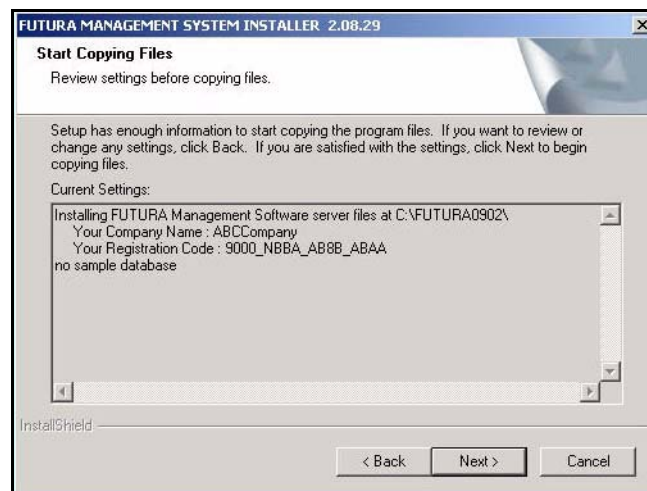

15. Enter your client/company name.

16. Enter the registration and renewal key numbers as provided to you by your Futura representative.
17. Click Next to display a message that asks if you want to download a sample database.

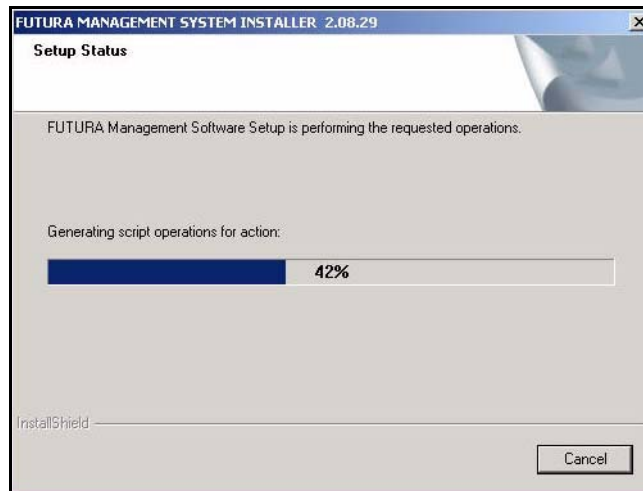

- While most companies choose not to download the sample database, you may want to consider this if you are planning to train on this computer and don't want to use your own data. It also may be helpful if you need more information about what or how to enter information in your own database.

18. Click No to display the screen that allows you to review the settings you have chosen so far.

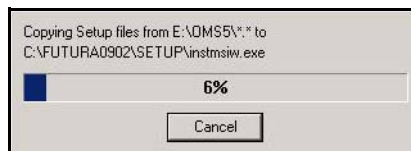

19. Click Next to display the Setup Status screen.

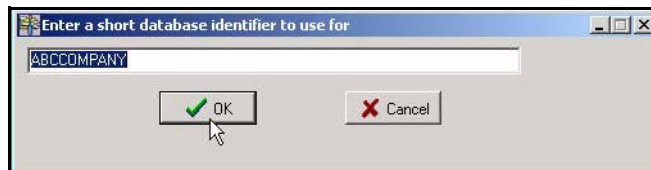

- If you click Back or Cancel here, the installation process will be terminated.

- The steps for the installation process will be quickly listed.
- This process may take several seconds to a few minutes. Please be patient.
- The Copy files screen will appear when the Setup Status process is completed.

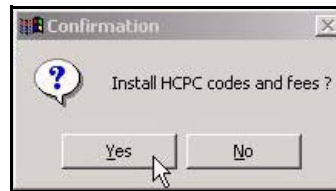

- Once the files are copied, the database identifier screen appears.

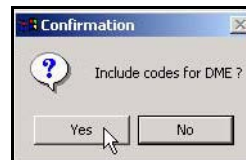

20. Enter a name for your database.

- This is typically your company name. Be sure not to include any spaces in the name.

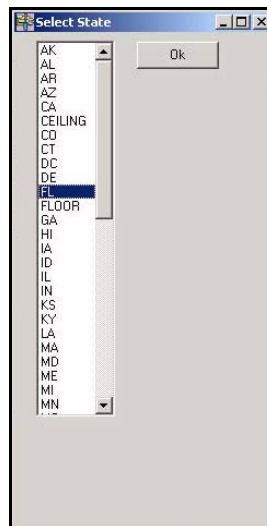

21. Click OK to display the Create Database process screen.
 - *The steps for the creation of the database will be quickly listed.*
 - *This process may take several seconds to a few minutes. Please be patient.*
 - *During this process, a screen appears to ask you if you want to download the HCPC codes.*

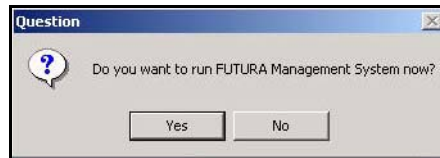

22. Click Yes to download this information and display another message that asks if you want to include the DME codes.

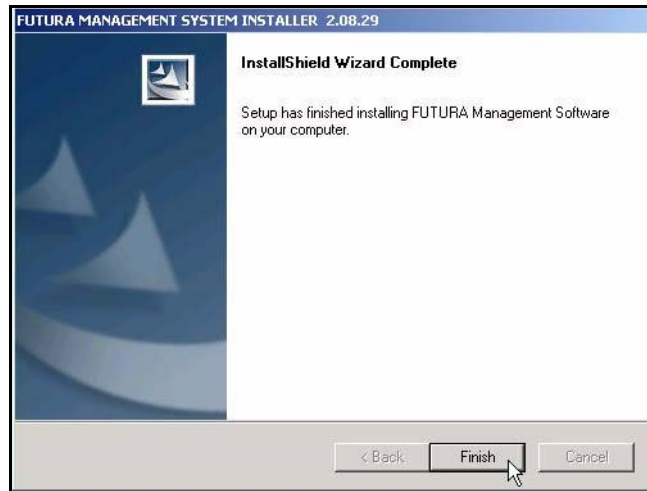

23. Click Yes to display the list of states.

24. Select the state for which you want to load HCPC codes.
- *The codes for your state will begin downloading.*
 - *This process may take several seconds to a few minutes. Please be patient.*
 - *Once this process is completed, a screen will appear to ask if you want to run the Futura software now. You can choose to do so or wait until later to open it.*

- *The final Install window will appear to let you know that the installation is complete.*

25. Click Finish to complete the process.

NOW YOU ARE READY TO GET STARTED!!!

IT IS RECOMMENDED THAT YOU REVIEW THE MAIN PORTION OF THIS USER GUIDE TO FAMILIARIZE YOURSELF WITH THE WAY THE SOFTWARE WORKS.

***Please contact Futura Tech Support at 727-791-3332
if you have any questions about your new software!***

Appendix C - Claim Submission Reports

From Futura: Day 1

The following is a sample of the report you will get from your Futura system when you process claims. This allows you to confirm what reports are being processed (see page 5-112):

Example:

R104		ABC Company Inc Batch Claim Report : Medicare - DMERC Region A Page : 1 Date : 01/20/03						
Cmp Name	F Inv	A	Qty	HCPC	Modifier	Allowed	Fee	Total
1 PT1LAST, PT1FIRST ID : 1XXXXXXX	P 37	Y	3			450.00	450.00	450.00
	01/06/03			Medicare			anticipated \$	0.00
1 PT2LAST, PT2FIRST ID : 1XXXXXXX	P 44	Y	2	E0232		4000.00	6000.00	
	01/18/03		5			1500.00	1500.00	7500.00
				Medicare			anticipated \$	5500.00
1 PT3LAST, PT3FIRST ID : 1XXXXXXX	P 31	Y	6			120.00	120.00	
	01/18/03		0	A4280		0.00	0.00	120.00
				Medicare			anticipated \$	0.00
1 PT4LAST, PT4FIRST ID : 1XXXXXXX	S 43	Y	1	A4280		250.00	250.00	
	01/19/03		6			120.00	120.00	
			1	E0149		285.00	285.00	655.00
				Medicare			anticipated \$	-22270.00
							\$	8725.00
Total Claims	:		4					
Total Assigned Claims	:		4		100.00%			
Total Non-assigned Claims	:		0		0.00%			
Total Billed - Assigned Claims	:		8725.00		100.00%			
Total Billed - Non-assigned Claims	:		0.00		0.00%			
R104		ABC Company Inc Batch Claim Report : Medicare - DMERC Region A Page : 2 Date : 01/20/03						
Cmp Name	F Inv	A	Qty	HCPC	Modifier	Allowed	Fee	Total
Cmp Company Name			Site Name			Fee	Allowed	Anticipated
1 ABC COMPANY						8725.00	6725.00	-16770.00
Totals						8725.00	6725.00	-16770.00

From Medicare/Envoy/EMC Carrier: Day 2+

The following is a sample of the report you will get when from the agency to which you submitted claims. These are known as confirmation reports and allow you to review what claims processed successfully and which (if any) were rejected. These reports will vary by agency, but will contain the same basic information. This allows you to confirm what reports are being processed (see page 5-112).

Example:
